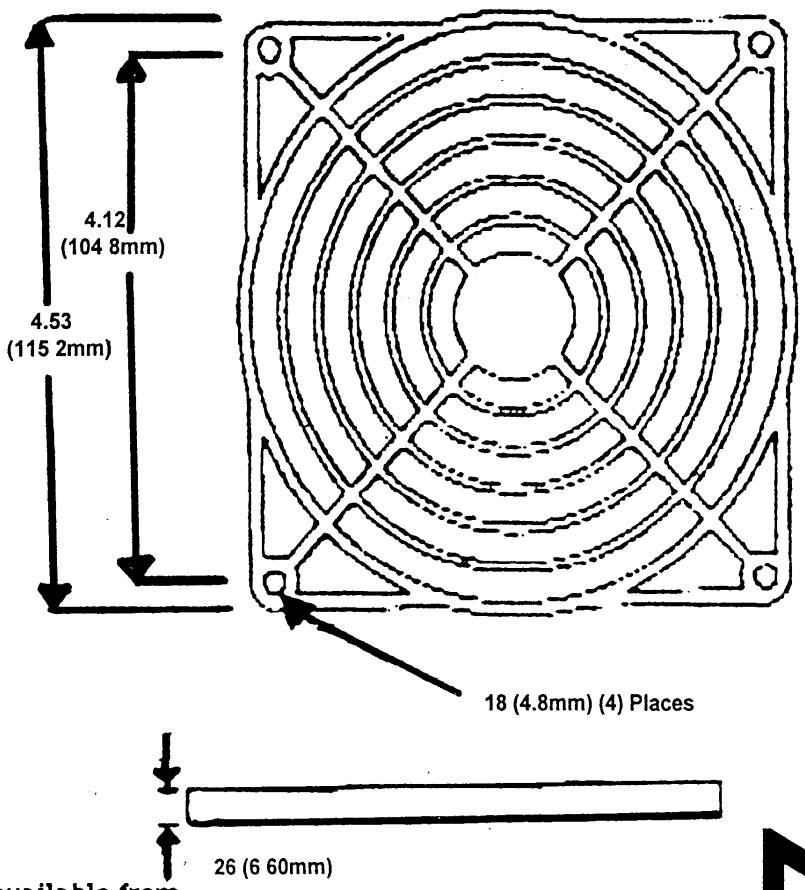
PLASTIC FAN GUARDS

GENERAL DESCRIPTION

The 09 series of plastic fan guards represents a program which was originated with a primary goal of developing a family of products that would offer customers maximum airflow while maintaining compliance to safety regulations. The consideration given to maximising airflow in these designs mandated that the strut and ring location be of a cross sectional area and configuration to be compatible with the majority of tubeaxial products offered for sale in today's market. The individual spacing of the fan guard surface from the fan blade was optimised so that acoustic interference was kept at a minimum while presenting the most compact overall thickness.

MATERIAL: UL Listed 94-VO

09120 - G


120mm - 4 1/2"
