Motorcycle & ATV Jump Lead Vehicle Computer Memory Saver Lead

This unique lead doubles as a Small Vehicle Jump Lead for when the traditional Jumper clips are too large for the smaller battery terminals, the use of this lead helps prevent damage either electrically or mechanically by ensuring that there is a good physical connection to the small battery terminals on vehicles such as Motorcycles, Snowmobiles and Jet Skis etc. (Recommended crank time is 5 seconds with a 15 second rest)

Another useful application is to keep power getting to a vehicle that is having a battery changed, thereby ensuring that all the on board computers continue to operate and do not lose any memory.

Available in Black and Red. Standard Cable length 1.2 mtrs (48 Inches)
The cable insulation in single skinned silicone.

P/N 126104/R = Red
P/N 126104/B = Black

**Adapts bulky Booster Cables to
connect in confined spaces**

**Perfect for Jump Starting
Small Vehicles or as a on-board
computer memory saver**

**Clip opens nearly 1"
Overall Length 4 ft**
