S4 MCS-51 module

The MCS-51 series module allows S4 to read and program ever popular 8751 series micros. A wide range of devices are covered by the module, including the latest FLASH devices from Atmel, the AT89C51 and AT89C52.

This module, as with all S4 modules, sits on top of S4's ZIF socket.

The two security features of 8751s, *locking* and *encryption* are both supported by the MCS-51 Library ROM software, which is supplied with the module.

A manual insert is supplied with the S4 MCS-51 series module, giving details and instructions on it's use.

Device Support:

| | | | | | | |
