

Plug-in Wireless Door Chime

- No wiring: plugs into mains power socket
- Incorporates plug socket so you don't lose the use of the socket
- Operates up to 20m
- 2 selectable chime tones
- 16 selectable channels to avoid interference
- Doubles as short range pager

Chime / bell sound only

A neat solution for adding a door chime. Simply plug the chime into a convenient mains socket and fix the bell push to the door frame. The chime has a socket on it so you can continue to use the mains for other purposes (maximum load 5A). Bellpush uses 12V alkaline battery (included).
