Supplies should be removed on a regular basis.

**Notes:**
- The University of Light recommends the use of age-related lamps and age-related protective glasses.
- For detailed exposure instructions, see the life science equipment manual.
- Exposure times may need to be adjusted for different age groups.
- Glare and bright light may require the use of age-related protective glasses.
- Exposing the skin to ultraviolet light can cause permanent eye damage.

**Step 1: Test**

**Amounts of Water Then Seek Medical Advice**

- **Amounts of Water:** Wash spills and splashes with liberal amounts of water. Avoid exposure to water.

**CAUTION:**

- **System:** Avoid accidental exposure. Protect the body from exposure.

**Step 2: Expose**

- Remove the protective interface from the environment. Store the equipment.

**Step 3: Confirm**

- Contact with the removed protective interface may appear on the skin. Ensure proper disposal and follow local guidelines.

**Step 4: Action**

- In case of contact with the removed protective interface, follow the recommended instructions.

**Recommended Processing Instructions**

- To minimize risk, local regulations must be observed.
- In the event of an emergency, follow local emergency procedures.

**Hazards**

- Wear proper protective clothing and footwear.
- Ensure that the environment is free of hazards.

**Material Safety Data Sheet**

- Review the Material Safety Data Sheet for detailed information.

**Development**

- Ensure that the equipment is properly cleaned and stored.
- Ensure that the equipment is properly maintained.

**Exposure to UV Light Can Cause Permanent Eye Damage.**

- **CAUTION:**
- Exposure to UV light can cause permanent eye damage.

**Development**

- Ensure that the equipment is properly cleaned and stored.
- Ensure that the equipment is properly maintained.
