

Visual Signals ROTATING

BEACONS

Industrial Rotating Beacons > RA201/200 Series

Product overview

The RA201/200 Series uses a parabolic reflector which, driven by an electric motor, revolves around a continuously illuminated lamp on the vertical axis of the beacon creating a powerful beam of light travelling

through 360 degrees. Generally, this type of beacon has a greater degree of light output than other models but this is off-set by the fact that the parabolic reflector only illuminates one given point at a time. The RA series also incorporates a Piezo Buzzer producing 85db, giving the user the peace of mind of two signals in one unit.

Features

- Continuously rated
- Suitable for use with conduit BESA box
- Suitable for surface or wall mounting
- Optional wall bracket & protective guard available – see accessory page
- Two signals in one unit
- Twin belt drive system
- IP65

Material

- UV Stable Polycarbonate Lens
- UV Stable ABS Mounting Base
