

2m USB 2.0 One Mini-b Male to Two A Male Y-Cable

Increase the power running to a portable hard drive from your PC or Mac®

Item #:81577

When a standard USB cable cannot transfer enough power to operate an external device, such as a portable 2.5in hard drive, you need a USB 2.0 y-cable. Simply plug this cable's USB Mini-b end into the device, and then plug the two USB A ends into open USB ports on one desktop PC or Mac. This cable then pulls power from both USB ports, and thus increases the output to the external drive.

The red moulded hood on the auxiliary USB A connector enables the user to quickly distinguish between main and auxiliary power. Foil and braid shielding reduces EMI/RFI interference, and twisted pair construction reduces crosstalk for high speed, error-free data transfer. This cable is compatible with USB 1.0, 1.1, and 2.0 specifications.

Please Note: This cable is not designed to split USB signals to multiple computers. The two USB A connectors are meant to plug into USB ports on the same computer.

Specifications

- Connectors: 1 USB type Mini-B Male to 2 USB type A Male
- Features a red moulded hood for the auxiliary USB A connector, allowing the user to easily distinguish between main and auxiliary power
- Foil and braid shielding reduces EMI/RFI interference and a twisted-pair construction helps reduce crosstalk, ensuring high-speed, error-free data transfer
- USB 2.0 compliant, Compatible with USB 1.0, 1.1
- Weight: 0.110 KG
- Colour: Black
