

NEW NEW 'Rotary Jet' NEW NEW Spray NEW NEW Etch/Developer

Rotary Jet

A Spray Processor with many advanced features making an ideal upgrade to a Bubble Etch Tank.

Etches PCBs in less than 90 seconds!

3-4 times faster than a Bubble Etch Tank.

Splash hopper included

Helps to contain chemistry to aid clean processing.

Optional Base Unit available

Places the top of the processing tank at an efficient working height of 110cm, (see over).

New Board Holder

Takes multiple small boards, (see over). Low profile design means less etchant or developer collects on board holder keeping processing cleaner.

Integral Spray Wash Tank

Washes the entire board holder to keep whole etching process clean. Fitted with adjustable spray bars.

Transparent case design

Panels can be examined after processing without removing.

Digital temperature control

Set & control temperatures accurately.

Developer or Etcher

As well as etching the unit can be used to develop photoresists.

Bottom drain with secure fastening

No syphoning necessary.

10" x 12" (254 x 305 mm) Board capacity

Safety cut-out on lid

Motor cuts off if lid is raised during etching.

Digital timer controls processing time

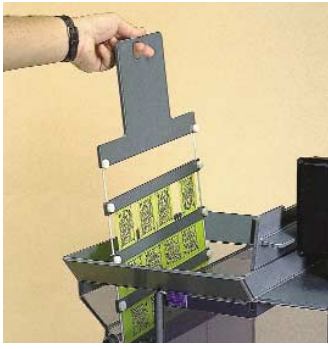

As the board is not immersed in liquid, there is no over-processing after completion. This makes over-etching very difficult.
