

R-ADSL411N

802.11n Wireless ADSL2+Router with 3G Broadband Backup

Empowering your ADSL Information Super Highway.

Are you looking for the latest Wireless networking technology with advanced and easy-to-use features without the hefty price tag? Introducing the new Dynamode **R-ADSL411N** 802.11n 300Mbps Wireless Router for ADSL Customers and 3G Internet users.

The **R-ADSL411N** comes with an integral high-performance ADSL2+ Modem which is ideal for your existing Internet connection from the likes of BT® and TalkTalk® for example. Ideal for customers looking to upgrade their existing ADSL Wireless Router to enjoy the next generation of Digital Lifestyle applications including HD Movie streaming, online HD Game Play and of course normal Web and Email duties but with improved speed, Wireless range and of course security.

Never before seen at this low price point, the new **R-ADSL411N** features a highly secure real-time SPI Firewall to keep all users safe while on-line, integral USB *SharePort*™ for sharing USB storage devices across the Network or Web, 4-Port High-Speed Ethernet Ports for legacy 'wired-only' devices such as Game Consoles, Desktop Computers or Security Cameras.

What's more it also has provision to allow a user supplied 3G USB adapter*** to be installed and thus allow Internet connectivity to be provided to all attached LAN devices, ideal not just for business users needing piece of mind for a redundant link should the ADSL line fail but also for residential users looking for a powerful and secure 802.11n Router who may not have a BT type phone system installed.
