

# PC-PSA series - Leather fitted case

*PSA-T series* PSA1301T  
PSA2701T

**Leather fitted case for protection during use**

This case fits around the PSA1301T or PSA2701T to provide protection both when in transit and when in use.

The case has apertures both for the display and controls, and for all of the connections sockets and other access points.

The case is padded to provide some drop protection. The fold-over lid is secured by rare earth magnets making it particularly convenient to close between operations.

The rear of the case has an elasticated hand strap for added security. Fixing points are incorporated for a carrying strap (included with the case) which allows the unit to be hung around the neck, for example.

An elasticated tube on the right hand side provides space for a telescopic antenna, or other small accessory to be carried with the spectrum analyzer.

This case will appeal particularly to users whose primary use for a spectrum analyzer is in the field.
