High Power Bipolar Transistors

Features:

- Collector - emitter sustaining voltage - $V_{CEO(sus)}$
= 60 V (Minimum) - TIP31A, TIP32A
= 100 V (Minimum) - TIP31C, TIP32C
- Collector - emitter sustaining voltage - $V_{CE(sat)}$ = 1.2 V (Maximum) at $I_C = 3 A$
- Current gain - bandwidth product $f_T = 3 MHz$ (Minimum) at $I_C = 500 mA$

Figure - 4 DC Current Gain

Figure - 5 Turn-Off Time

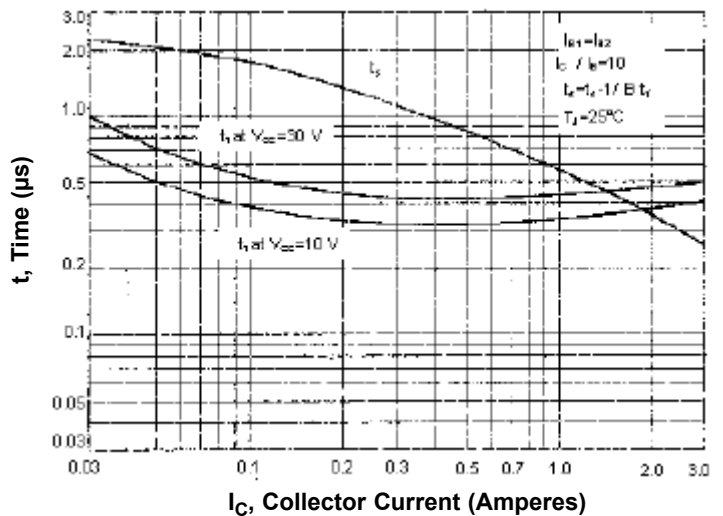

Figure - 6 Active Region Safe Operating Area

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate I_C - V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figure - 6 curve is based on $T_{J(PK)} = 150^\circ\text{C}$; T_C is variable depending on power level. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(PK)} = 150^\circ\text{C}$. At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown
