## 3G SIM Master

### *The UK's Best Selling SIM Card Reader just got better*

The LM022 3G SIM Master is an invaluable tool to help mobile phone users backup their phone book data, SMS messages, move to a new handset and to effortlessly change network provider. Read phone book entries from your SIM card, edit, delete and backup to your PC. The enclosed software allows you to backup your phone book and avoid losing your information and transfer to a new SIM card or cards. Compose SMS messages on your PC and save to the SIM card ready to be sent from your mobile.

Writing messages on your PC is faster and easier than on your mobile. Save and backup your received messages for future use and reference. Link your saved phone book to a personnel data file and store all necessary information such as company name, e-mail address, fax ... etc.

With mobile phone crime on the increase and the ease at which we lose our mobile phones, having a backup of your contacts and sms messages can be as important as the insurance of the handset itself.

The 3G SIM Master now comes with a micro sim card adapter, which allows you to view and backup your micro sim card - great for those users with iPhones and iPads who want to transfer their contacts and sms messages from an existing mini SIM card to a iPhone / iPad micro SIM card. The 3G SIM Master is also 2G backward compatible and can save up to 500 contacts from a 3G GSM card.

### **Product Features:**

- Migrate phone books from one SIM card to another.
- Upgrade from a 2G SIM card to a 3G SIM card
