

AT-64000

Up to 4 GHz Linear Power Silicon Bipolar Transistor Chip

Data Sheet

Description

The AT-64000 of Avago Technologies is a high performance NPN silicon bipolar transistor. This device is designed for use in medium power, wideband amplifier and oscillator applications operating over VHF, UHF and microwave frequencies

Excellent device uniformity, performance and reliability are produced by the use of ion-implantation, self alignment techniques, and gold metallization in the fabrication of these devices. The use of ion-implanted ballast resistors ensures uniform current distribution through the multiple emitter fingers.
