COAST™

LIGHTS • KNIVES • MULTI-TOOLS

COAST Products is a 93-year-old, family-owned company that produces LED lights, knives, and multi-tools for work, recreation, and everyday use.

COAST produces innovative, technologically advanced products backed by a lifetime guarantee that makes the user's life safer, easier, and more enjoyable.

THREE GENERATIONS OF QUALITY
SINCE 1919

LIFETIME GUARANTEE

LIFETIME GUARANTEE: COAST Products guarantees this product to be free of defects in materials and workmanship for the life of the original purchaser. This guarantee does not cover normal wear and tear, nor damage resulting from misuse or neglect. If this product is defective, return it to us for repair or replacement, along with a check for $5.00 shipping and handling. Guarantee does not include batteries.

David C. Brands—Owner, COAST Products

Quality in Action

I am currently stationed in Iraq at Joint Base Balad. I purchased one of your LED flashlights...and it has been an invaluable asset to me getting the job I do here done. Thank you for having such wonderful products for us in the military available for us to purchase here.

—*Steven P.*

Since 1995, COAST has provided over 500,000 lights, knives, and multi-tools to U.S. military installations all over the world.

The Maximum Amount of Light for Your Application

FLOOD BEAM

for General Use

BULLS-EYE SPOT™ BEAM

for Tactical & Professional Use

INSPECTION BEAM

for Up-Close & Inspection Use

Key Technologies

Fingertip Speed Focus Control™ & Beam Lock™

Many of our High Performance lights feature a one-handed system for moving from a broad flood beam to a focused spot beam. A simple push forward or pull back with the thumb on the head of the light adjusts the beam to suit your application. Then simply twist to lock in exactly the beam you need.

Twist Focus System

Twist the head of the flashlight to move between a flood and a spot beam.

Quick-Cycle Switch System™

To activate the high-output setting from the OFF position, fully depress and release the switch one time. High output setting is the standard setting when a bright light is needed. To activate the 50% beam setting from the OFF position, fully depress and release the switch two times. 50% output is useful for reading, report writing, identification and personal inspections.

Some COAST lights also feature a strobe as the second part of the cycle. In this case, the light sequence is high, strobe, low.

Dual Color

COAST dual color lights have both clear, bright white LEDs and a red LED. The white LEDs are perfect for general use, while the red LED offers glare-free light. Because the red beam doesn't cause the pupils of the eye to constrict, it preserves night vision. This makes it useful for reading maps at night or for locating things outdoors or in a darkened room without the dazzling glare of a white light.

Glossary of LED Flashlight Icons

FINGERTIP SPEED FOCUS – BEAM LOCK™: Focusing system that allows you to adjust your light from flood to spot with just your fingertip. Lock the beam focus in any position you want.

4 COLORS, 4 POWER SWITCHES: Our 4-color system combines one white LED, one red LED, one blue LED, one green LED, each color controlled with its own switch.

MAX BEAM™ OPTIC – BULLS-EYE SPOT™: It produces our Bulls-Eye Spot™ beam giving you a great focused spot, while producing an outer ring of flood light which allows you to see a broader area for added side vision.

MAX-BEAM™ OPTIC – WHITE FLOOD BEAM: Multiple LEDs project a wide, flood beam giving you the maximum amount of light with no dark spots.

MAX-BEAM™ OPTIC – WHITE INSPECTION BEAM: Produces a tight inspection beam, giving you the most useful light beam for short distance applications.

PURE BEAM™ FOCUSING OPTIC – FLOOD BEAM / BULLS-EYE SPOT™: Our patented focusing system that provides superior beam consistency from spot to flood, with no dark rings typically associated with focusing flashlights.

QUICK-CYCLE SWITCH – HIGH & LOW: Allows you to select between a high output or a low output setting so you can choose the right level for your application.

QUICK-CYCLE SWITCH – HIGH, STROBE & LOW: Allows you to select between a high output, strobe, or low output setting so you can choose the right level for your application.

TWIST TO FOCUS: Our twist focusing system

WHITE FLOOD AND RED SPOT BEAM: Our dual-color system combines five white LEDs with one red LED, each color controlled with its own switch.

WHITE FLOOD AND UV SPOT BEAM: Our dual-color system combines three white LEDs with three UV LEDs, each color controlled with its own switch.

COAST™
LIGHTS • KNIVES • MULTI-TOOLS

Introducing COAST's New Patented Blade-Assist Line of Knives

Rapid Response® Knives
Advanced Knife Technology

Ambidextrous pocket clip

Fiberglass-filled textured nylon handles for secure grip

Stainless steel, heat-treated liners for strength and corrosion resistance

Ambidextrous thumb stud

High-carbon 400-series stainless steel blade

Locking systems are tested to ensure they are working properly.

Unlike other "hidden inside the handle" spring-assist designs, our open-frame design allows debris to be easily cleaned out of the knife.

S.A.T.™ Blade-Assist System
The patented (US 7,827,697 & 7,854,067) roller-bearing mounted to the blade of our Rapid Response™ knives makes them release faster and smoother.

Max-Lock™ System
Locks the blade closed and double locks the Liner-Lock® when open

**S.A.T.™
SMOOTH ASSIST
TECHNOLOGY**

Smooth Assist Technology— Not Just FASTER...SMOOTHER

Our patented system not only asists the blade to open quickly but smoothly due to its *friction-reducing roller-bearing* design. When the spring moves the blade out of the handle, it rides on the roller bearing, allowing the blade to open smoothly and quickly—without requiring tremendous spring force. The roller bearing also reduces the spring load on all internal blade-assist components for a lifetime of reliable, smooth, and fast operation.

MAX-LOCK™

Max-Lock™ Technology

Conveniently positioned on the side of the handle allowing easy access for your thumb to lock or unlock the safety. Move it forward to lock and back to unlock. This secondary lock can be engaged with the blade open *or* closed.

Double-Lock™ Technology

Knife shown is Dark Force II,
our 19357 located on page 39.

Double-Lock™ System

DOUBLE-LOCK™

Look for our new Double-Lock™ technology in our large Liner-Lock®
knives. When pushed forward into its engaged position, it prevents the
Liner-Lock® from moving out of its locked position.

Also included is a *tension-adjusting feature* so the user can adjust
the detent force required to move the Double-Lock™ forward to
engagement and rearward to the off position.

The Double-Lock™ system works well for any knife owner and when
it is engaged, adds that extra margin of safety for those that use their
knife in extremely rugged conditions. For fire & rescue, police, military
or challenging situations faced by anyone, the Double-Lock™ sets the
new standard for extreme use, knife safety, and convenience.

Glossary of Knife Icons

S.A.T.™ **SMOOTH ASSIST** **TECHNOLOGY**	**S.A.T.™ SMOOTH ASSIST TECHNOLOGY:** S.A.T.™ uses its friction-reducing roller-bearing design to allow the blade to open quickly but smoothly while reducing spring load on all internal blade-assist components. When the spring moves the blade out of the handle, it rides on the roller bearing, allowing the blade to open smoothly and quickly—without requiring tremendous spring force.
MAX-LOCK™	**MAX-LOCK™:** The Max-Lock™ is a safety button on the side of the knife's handle that can lock the blade in both the open and closed positions.
DOUBLE-LOCK™	**DOUBLE-LOCK™:** The Double-Lock™ safety switch mechanism works in conjunction with a primary Liner-Lock® blade lock system to prevent its disengagement. This makes a Liner-Lock® doubly safe.
LINER-LOCK®	**LINER-LOCK®:** The Liner-Lock® locking mechanism is a portion of the blades handle-liner that moves from the side of the handle into position to block the blade from closing when the blade is opened. This steel portion of the liner must be pushed to the side before the blade can be closed.
LOCKBACK	**LOCKBACK:** The Lockback blade locking system is located in the top of the knife handle and locks the blade by dropping a locking-bar into a locking notch at the top back-end of the blade.
MIDLOCK	**MIDLOCK:** The Midlock blade locking system is located in the top of the knife handle and locks the blade by dropping into a locking notch at the top back-end of the blade. The lock release is located midpoint between the front and back of the handle.
FRAME-LOCK	**FRAME-LOCK:** The Frame-Lock blade locking mechanism is part of the knife's frame that moves from the side frame of the knife when the blade is opened to block the blade from closing. This steel component of the frame must be pushed to the side to allow the blade to close.
BUTTON-LOCK	**BUTTON-LOCK:** The Button-Lock is a Liner-Lock® release button located in the side of the knife's handle and when it is pushed it releases the Liner-Lock® mechanism allowing the blade to close.
