# LUXEON K

## High Efficiency Arrays

### Introduction

The LUXEON® K arrays in this datasheet deliver high flux at high efficacy in a small, easy to use package. The high efficiency delivers high light output in thermally constrained systems like retrofit lamps and high efficiency in systems like downlights aiming for high energy efficiency. The small size bolt down package enables simple assembly in space constrained systems. LUXEON K is specified at real world operating conditions,  $T_j$  85°C. With Freedom From Binning, every LUXEON K falls within a single 3 McAdam ellipse positioned around the center point of the ANSI nominal CCT bins to deliver tight Correlated Color Temperature control to ensure consistency in system color point. In addition, these parts deliver the lumen maintenance and reliability that all LUXEON LEDs are renowned for. This document contains the performance data needed to design and engineer LUXEON K based applications.

LUXEON K,

- Family of modules covering 400 to over 2000 lumens
- *Freedom From Binning* with single 3 step MacAdam ellipse color performance
- Exceed ENERGY STAR® lumen maintenance requirements
- High efficacy for sustainable design
- Simplifies system design/assembly
- Guaranteed performance at 350 mA, 85°C.

# General Information

## Product Nomenclature

LUXEON K products are specified and binned “hot” under conditions comparable to those found in “real-world” lighting products. The test conditions are at 350 mA D.C. with junction temperature at 85°C.

The part number designation is explained as follows:

L X K A - P B C D - E F G H

Where:

A — designates minimum CRI performance (value 8 = 80 minimum, value 9 = 90 minimum)

B — designates color (value W = White)

C, D — designates nominal ANSI CCT (value 27 = 2700K, 30 = 3000K, 35 = 3500K, 40 = 4000K, and 50 = 5000K)

E, F — custom spec designation

G, H — emitter count

Therefore, 3000K products specified at 350 mA 85°C follow the part numbering scheme:

L X K 8 - PW 3 0 - 0 0 0 4 for LUXEON K 3000K 4-up

L X K 8 - PW 3 0 - 0 0 0 8 for LUXEON K 3000K 8-up

## Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Philips Lumileds projects that LUXEON K products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700 mA. This projection is based on constant current operation with junction temperature maintained at or below 125°C. This performance is based on independent test data, Philips Lumileds historical data from tests run on similar material systems, and internal LUXEON reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

## Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON K is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS directive. Philips Lumileds will not intentionally add the following restricted materials to the LUXEON K: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

## LUXEON K at Test Current <sup>[1]</sup>, Junction Temperature = 85°C

Table 2.

Part Number	Nominal CCT	Color Temperature <sup>[2]</sup> CCT Typical	Typical Total Included Angle <sup>[3]</sup> (degrees) $\theta_{90V}$	Typical Viewing Angle <sup>[4]</sup> $2\theta_{1/2}$ (degrees)
LXKx-PW27-xxxx	2700K	2725K	125	100
LXKx-PW30-xxxx	3000K	3045K	125	100
LXKx-PW40-xxxx	4000K	3985K	125	100

Notes for Table 2:

1. Test current is 350 mA for all LXKx-PWxx products.
2. Total angle at which 90% of total luminous flux is captured.
3. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is  $1/2$  of the peak value.
4. All white products are built with Indium Gallium Nitride (InGaN).

Parameter	Maximum Performance
DC Forward Current (mA) <sup>[3]</sup>	1050
Peak Pulsed Forward Current (mA) <sup>[3]</sup>	1050
Average Forward Current (mA) <sup>[3]</sup>	1050
ESD Sensitivity	< 8000V Human Body Model (HBM) Class 3A JESD22-A114-E < 400V Machine Model (MM) Class B JESD22-A115-B
LED Junction Temperature <sup>[1]</sup>	125°C
Operating Case Temperature at 350 mA	-40°C - 125°C
Storage Temperature	-40°C - 125°C
Reverse Voltage (V <sub>r</sub> )	See Note 2

Notes for Table 5:

1. Proper current derating must be observed to maintain junction temperature below the maximum.
2. LUXEON Power LEDs are not designed to be driven in reverse bias.

# Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO<sub>2</sub> emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, consumer electronics, and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at [www.philipslumileds.com](http://www.philipslumileds.com).
