

### **Oscilloscope Probes and Probe Accessories**

# **PROBE SELECTION GUIDE**

LeCroy has a wide variety of world class probes and amplifiers to compliment its product line. From the ZS high impedance active probes to the WaveLink differential probing system which offers bandwidths up to 25 GHz, LeCroy probes and probe accessories provide optimum mechanical connections for signal measurement.

### **ACTIVE VOLTAGE PROBES**

### **ACTIVE VOLTAGE PROBES**

LeCroy Active Voltage Probes Model Numbers:

> ZS1000 ZS1500 ZS2500

Engineers must commonly probe high-frequency signals with high signal fidelity. Typical passive probes with high input R and C provide good response at lower frequencies, but inappropriately load the circuit, and distort signals, at higher frequencies. Active voltage probes feature both high input R and low input C to reduce circuit loading across the entire probe/oscilloscope bandwidth. With low circuit loading, and a form factor that allows probing in confined areas, the active voltage probe becomes the everyday probe for all different types of signals and connection points.

# **ZS SERIES ACTIVE PROBES**

LeCroy Active Voltage Probe Model Numbers:

ZS1000 ZS1500 ZS2500 The ZS Series probes provide high impedance and an extensive set of probe tips and ground accessories to handle a wide range of probing scenarios. The high 1 M $\Omega$  input resistance and low 0.9 pF input capacitance mean this probe is ideal for all frequencies. The ZS Series probes provide full system bandwidth for all LeCroy oscilloscopes having bandwidths of 2 GHz and lower.

### High Impedance Reduces Circuit Loading Across Full Oscilloscope Bandwidth

Engineers must commonly probe high frequency signals with high signal fidelity. Typical passive probes with high input R and C provide good response at lower frequencies, but inappropriately load the circuit, and distort signals, at higher frequencies. The ZS Series features both high input R (1 M $\Omega$  and low input C (0.9 pF) to reduce circuit loading across the entire probe/oscilloscope bandwidth. With low circuit loading, and a form factor that allows probing in confined areas, the ZS Series becomes the everyday probe for all different types of signals and connection points. The ZS1000 is ideal for 200–600 MHz oscilloscopes. The ZS1500 is ideal for 1 GHz oscilloscopes and the ZS2500 is ideal for 2 GHz oscilloscopes.

## **CURRENT PROBES**

### **Measuring AC and DC Currents**

LeCroy current probes do not require the breaking of a circuit or the insertion of a shunt to make accurate and reliable current measurements. Based on a combination of Hall effect and transformer technology, LeCroy current probes are ideal for making accurate AC, DC, and impulse current measurements.

### Fully Integrated with Oscilloscope

Many current probes require external power supplies or amplifiers to display a waveform on the oscilloscope screen. All LeCroy current probes are powered through the LeCroy ProBus connection and require no additional hardware. Along with providing power, the ProBus connection allows the current probe and oscilloscope to communicate, resulting in current waveforms automatically displayed on screen in Amps, and calculated power traces scaled correctly in Watts. This full integration also allows for Degauss and Autozero functions to be done directly from the oscilloscope with a single button press.

### **Applications**

LeCroy current probes are available in a wide range of models for a wide range of applications. The full range of LeCroy current probes includes models with bandwidths up to 100 MHz, peak currents up to 700 A and sensitivities to 10 mA/div. Multiple current probes can be used together to make measurements on three-phase systems, or a single current probe can be used with a voltage probe to make accurate instantaneous power measurements. LeCroy current probes are often used in applications such as the design and test of switching power supplies, motor drives, electric vehicles, and uninterruptible power supplies. LeCroy Current Probes Model Numbers:

> AP015 CP030 CP031 CP150 CP500

*Opposite page:* CP031, 30A, 100 MHz Current Probe.

### **CURRENT PROBES**

LeCroy Current Probes Model Numbers:

CP031 CP030 AP015 / DCS015 CP150 CP500

#### CP031 – 30A, 100 MHz

The CP031 is LeCroy's highest bandwidth current probe. Along with the high 100 MHz bandwidth the CP031can probe continuous currents of 30  $A_{rms}$  and peak currents up to 50 A. The CP031 features a small form factor making it easier to probe on a crowded, compact board.

#### CP030 - 30 A, 50 MHz

The CP030 was designed with a small form factor for today's crowded boards. The small jaw can probe currents in tight spaces and still clamp onto conductors up to 5 mm in diameter. Continuous currents of 30  $A_{rms}$  and peak currents of 50 A can be measured by the CP030, which also features a 50 MHz bandwidth.

#### AP015 – 30 A, 50 MHz

The AP015 current probe can measure continuous current of 30 A<sub>rms</sub> and peak pulses of up to 50 A for durations up to 10 seconds. This probe also features an overheating protection circuit, which will display an on-screen warning to the user to prevent damage. A probe unlock detection feature is also built in to the AP015 to ensure accurate measurements.

#### DCS015 – Deskew Calibration Source for AP015

The DCS015 calibration source has both voltage and current timealigned signals, which enables the precise deskew of voltage and current probes. Most voltage probes along with the CP031, CP030 and AP015 are compatible with the DCS015.

## **CURRENT PROBES**

### CP150 - 150 A, 10 MHz

Features:

- 150 Arms continuous current
- 500 Apeak
- 10 MHz bandwidth

### CP500 – 500 A, 2 MHz

Features:

- 500 Arms continuous current
- 700 Apeak
- 2 MHz bandwidth

### **DIFFERENTIAL PROBES**

## **DIFFERENTIAL PROBES**

Differential active probes are like two probes in one. Instead of measuring a test point in relation to a ground point (like single-ended active probes), differential probes measure the difference in voltage of a test point in relation to another test point.

**Differential Probes** Model Numbers: 200 MHz - 1.5 GHz **ZD200 ZD500 ZD1000 ZD1500 AP033 AP034** 3 GHz - 6 GHz **D300A-AT D410 D420 D500PT D600A-AT D610 D620** 8 GHz - 13 GHz **D830 D1030 D1330** 11 GHz - 25 GHz D1305-A D1605-A D2005-A D2505-A

LeCroy

# **ZD SERIES DIFFERENTIAL PROBES**

LeCroy Differential Probe Model Numbers:

ZD200 ZD500 ZD1000 ZD1500 The ZD Series probes provide wide dynamic range, excellent noise and loading performance and an extensive set of probe tips, leads, and ground accessories to handle a wide range of probing scenarios. The low 1 pF capacitance means this probe is ideal for all frequencies. The ZD Series differential probes provide full system bandwidth for all LeCroy Oscilloscopes 1.5 GHz and lower.

#### **Fully Integrated**

With the ProBus interface, the ZD500, 1000, and 1500 becomes an integral part of the oscilloscope. All probe gain and offset controls are transparent to the user, making it easier to probe the circuit without concern for which gain setting to choose. When used with a LeCroy digital oscilloscope, no external power supply is required.

#### Wide Dynamic Range

The ZD500, 1000, 1500 probes provides transparent probe attenuation so signals are always optimized for the display. The differential range is 18 V<sub>p-p</sub> with a differential offset of ±8 and common mode range of ±10 V, making this versatile for every probing application.

#### **Wide Applications**

The wide dynamic range of 16  $V_{p-p}$  and offset range of ±8 suit this probe to a wide range of applications and signal types. The ZD differential probes are ideally suited for Automotive, Serial Data, power, and general purpose use.

# WAVELINK LOW BANDWIDTH DIFFERENTIAL PROBES

LeCroy WaveLink Low Bandwidth Differential Probe and Accessory Model Numbers:

D410 D410-PT D420 D420-PT D500PT D300A-AT D600A-AT D610 D610-PT D620 D620-PT WL-PBus WL-PLink WaveLink® probes provide industry leading technology for wideband signal connection to test instruments. The first differential probes to employ SiGe technology, they deliver full system bandwidth when used with WaveRunner,® WavePro,® WaveMaster,® DDA and SDA oscilloscopes up to 6 GHz.

WaveLink probes:

D500PT-Tin

Dx10-HiTemp

(Optional)

- Maintain good loading characteristics across the frequency span
- Optimized for gain, noise and bandwidth for optimal performance
- Offer broad range of dynamic range and noise over gain settings by incorporating automatic probe attenuation changes

WaveLink is the first differential probe to use a unique calibration process to achieve superb waveform fidelity for routine voltage measurements. Calibration coefficients "fine tune" the frequency response of each WaveLink probe and are individually determined during factory calibration and programmed into the probe. The SDA, DDA, WaveMaster, WaveRunner, or WavePro Series oscilloscopes read this data and use it to digitally compensate the entire system response for superior fidelity.

## WAVELINK MEDIUM BANDWIDTH DIFFERENTIAL PROBES

LeCroy WaveLink Medium Bandwidth Differential Probe and Accessory Model Numbers:

D830 D1030 D1330 Dxx30-PT-KIT Dxx30-SMA-SMP-LEADS WL-PLINK-CASE

#### **General Purpose Probe with Range of Capabilities**

LeCroy's WaveLink 8-13 GHz Differential Probes are a medium bandwidth, general purpose probing solution with high input dynamic range and offset range capability. These probes support solder-in, positioner (browser), square pin and SMA/SMP cabled tip/lead connections. The range of capabilities is ideal for a variety of high speed DDR signals where high dynamic range and large offset requirements are common.

#### **Features and Benefits**

- Choice of 8, 10, or 13 GHz bandwidth models
- 3.5 Vpk-pk dynamic range
- ±4 V offset range
- Ideal for DDR3, DDR4, LPDDR3
- Deluxe soft carrying case
- Wide variety of tips and leads
  - Solder-In Lead
  - Positioner (Browser) Tip
  - SMA/SMP Lead
  - Square Pin Lead
- SMA/SMP lead set accessory does not require purchase of a different amplifier
- Deluxe Soft Carrying Case

# WAVELINK HIGH BANDWIDTH DIFFERENTIAL PROBES

LeCroy WaveLink High Bandwidth Differential Probe and Accessory Model Numbers:

D1305-A D1605-A D2005-A D2505-A LPA-2.92 WL-2.92MM WL-PLINK-A

#### **Ultra-wideband Architecture for Superior Signal Fidelity**

LeCroy's WaveLink® high bandwidth differential probes utilize advanced differential traveling wave (distributed) amplifier architecture to achieve superior high frequency true analog broadband performance. Traveling wave (distributed) amplifiers are commonly used in ultra high frequency broadband amplifiers. This multi-stage amplifier architecture maximizes gain per stage and minimizes probe attenuation, which provides very low probe noise and fast rise times.

#### **Features & Benefits**

- Up to 25 GHz bandwidth (probe + oscilloscope)
- System rise time as fast as 13 ps (20–80%)
- Highest bandwidth Solder-In solution (25 GHz)
- Ultra-compact browsertip (22 GHz)
- Superior probe impedance minimizes AC loading on device under test (DUT)
- Carbon-composite browser tips optimize signal fidelity and loading
- Probe noise as low as 14 nV/√Hz (1.6 Vrms)
- Low probe attenuation
- Large operating voltage range
  - ±4 V common mode range
  - ±2.5 V offset range
  - 2.0 V<sub>pk-pk</sub> dynamic range
- Long length Solder-In tip with field replaceable resistors

## WAVELINK HIGH BANDWIDTH DIFFERENTIAL PROBES

### **DIFFERENTIAL PROBES**

LeCroy Differential Probes Model Numbers:

AP033 AP034

#### AP033 and AP034

**AP033** 

High bandwidth, excellent common-mode rejection ratio (CMRR) and low noise make these active differential probes ideal for applications such as disk drive design and failure analysis, as well as wireless and data communication design. With the ProBus interface, the AP034 and AP033 become an integral part of the oscilloscope, allowing sensitivity, offset and common-mode range to be displayed on the scope screen. Common mode sensing and input protection capabilities of the AP033 add additional functionality.

#### **Features for both probes:**

- 500 MHz bandwidth (AP033)
- 1 GHz bandwidth (AP034)
- x10 gain to ÷ 10 attenuation range (AP033)
- 10,000:1 DC CMRR
- Low 9 nV/√Hz noise (AP033)
- 1.5 pF/side input C (AP034)
- 200 µV/div (AP033)
- Input ESD protection
- Autozero feature

## **DIFFERENTIAL PROBES**

Specifications	AP034	AP033

### **Ordering Information**

Product Description	Product Code
500 MHz Differential Probe	AP033
1 GHz Differential Probe	AP034

Differential active probes are like two probes in one. Instead of measuring a test point in relation to a ground point (like singleended active probes), differential probes measure the difference in voltage of a test point in relation to another test point. LeCroy High Voltage Differential Probe Model Numbers: AP031 ADP300 ADP305

*Opposite page: ADP305 High Voltage Differential Probe* 

LeCroy High Voltage Differential Probes Model Numbers:

AP031 ADP300 ADP305 The AP031 is a low cost, battery operated active differential probe intended for measuring higher voltages. The differential techniques employed permit measurements to be taken at two points in a circuit without reference to the ground, allowing the oscilloscope to be safely grounded without the use of opto-isolators or isolating transformers.

#### **Features**

- Safe floating measurements
- 15 MHz bandwidth
- 700 V maximum input voltage
- Works with any 1 M $\Omega$  input oscilloscope

### **AP031 Specifications**

Attenuation	÷10 / ÷100
Bandwidth	15 MHz
Input R	4 MΩ
Differential Mode Range	±70 V / ±700 V DC + Peak AC
Common Mode Range	±700 V DC + Peak AC
CMRR	86 dB @ 50 Hz
	56 dB @ 200 kHz

Power Requirements: four AA batteries

ADP30X high-voltage active probes are safe, easy-to-use, and ideally suited for measuring power electronics. The ADP300 is designed for troubleshooting low-frequency power devices and other circuits where the reference potential is elevated from the ground or the location of the ground is unknown. The ADP305 is designed for measuring the high-speed floating voltages found in today's power electronics.

#### **Features**

- 20 MHz and 100 MHz bandwidth
- 1,000 V rms common mode voltage
- 1,400 V peak differential voltage
- EN 61010 CAT III
- 80 dB CMRR at 50/60 Hz
- ProBus system
- Full remote control

### **ADP30X Specifications**

#### **Electrical Characteristics**

Bandwidth	20 MHz (ADP300)		
	100 MHz (ADP305)		
Differential Voltage	1,400 V peak		
Common Mode Voltage	1,000 V rms CAT III		
Low-Frequency Accuracy (probe only)	1% of Reading		
CMRR	50/60 Hz 80 dB (10,000:1)		
	100 kHz 50 dB (300:1)		
Max. Slew Rate (referenced to input)	60,000 V/μs (ADP300)		
	300,000 V/µs (ADP305)		
AC Noise (referenced to input)	50 mV rms		
Attenuation	÷100/÷1000 (automatically selected by scope)		
Input Impedance	Between inputs 8 MΩ, 6 pF		
	Each input to ground $4 M\Omega$ , 1 pF		
Sensitivity	1 V/div to 350 V/div (ADP300)		
	200 mV/div to 350 V/div (ADP305)		
Interface	ProBus, 1 MΩ*		

#### **General Characteristics**

Overall Length	2 m
Input Connectors	4 mm Shrouded Banana Plug
Operating Temperature	0 °C to 50 °C
Warranty	1 year

\*Requires AP-1M for oscilloscopes with 50  $\Omega$  only inputs

## **DIFFERENTIAL AMPLIFIERS**

Differential amplifiers are intended to act as signal conditioning preamplifiers for oscilloscopes and network and spectrum analyzers, providing differential measurement capability to instruments having only a single-ended input. The "-PR2" version of each amplifier is a dual channel unit. The DXC series differential input cables are matched to the characteristics of the amplifier. LeCroy Differential Amplifier and Accessory Model Numbers:

DA1855A DA1855-PR2 DA1855A-PR2-RM DA1855A-RM DSC5100 DXC100A DXC200 DA101

Opposite page: The DA1855A Differential Amplifier can be used for a complete PowerMeasure System.

### **DIFFERENTIAL AMPLIFIERS**

LeCroy Differential Amplifier and Accessory Model Numbers:

DA1855A DA1855-PR2 DA1855A-PR2-RM DA1855A-RM DSC5100 DXC100A DXC200 DA101

#### **DXC-5100**

÷100, 2.5KV Passive High Voltage Probe Pair. Requires DA101 for full performance

#### **DXC100A**

÷100 or ÷10 Selectable, 250 MHz Passive Differential Probe Pair

- DC to 100 MHz Bandwidth with DA1855A DC to 10 MHz Band width with DA1822
- Max Input Voltage 500 V
- Selectable 10 or 100 Attenuation
   Factor
- 1.2 Meter Cable Length

#### **DXC200**

÷1, 50 MHz, Passive Differential Probe Pair

- DC to 50 MHz with DA1855A DC to 10MHz with DA1822A
- Max Input Voltage
   500 V (Limited to Amplifier Max Input Voltage)
- x1 Differential Probe Pair
- 0.7 Meter Cable Length

**DA101** ÷10, 1MOhm Passive Attenuator for DXC series probes

## **DIFFERENTIAL AMPLIFIERS**

#### **DA1855A**

The DA1855A is a stand-alone, high-performance 100 MHz differential amplifier. It is intended to act as a signal conditioning preamplifier for oscilloscopes, digitizers and spectrum analyzers, providing differential measurement capability to instruments having only a single-ended input. When used with a DA1855A, oscilloscopes can obtain Common Mode Rejection Ratio (CMRR) and overdrive recovery performance levels previously unobtainable.

Amplifier gain can be set to 1 or 10. A built-in input attenuator can be separately set to attenuate signals by a factor of 10, providing gains of 10, 1, or 0.1 and common mode dynamic range of  $\pm 15.5$  V ( $\pm 1$ ) or  $\pm 155$  V ( $\pm 10$ ). Optional probes increase the maximum input signal and common mode ranges in proportion to their attenuation ratio but do not exceed their maximum input voltage rating. Effective gain of the DA1855A, including probe attenuation, amplifier gain and attenuator settings, is automatically displayed.

#### DA1855A-PR2

2 Ch, 100 MHz Differential Amplifier with fast over drive recovery, calibrated offset, and selectable LP filters.

LeCroy High Voltage Probe Model Numbers:

> PPE1.2KV PPE2KV PPE4KV PPE5KV PPE6KV PPE20KV

The PPE series of probes are suitable for a wide range of applications where high-voltage measurements must be made safely and accurately. There are five fixed-attenuation probes covering a range from 2 kV to 20 kV, and one switchable probe providing  $\div$ 10/ $\div$ 100 attenuation for voltage inputs up to 1.2 kV.

New technology which utilizes hybrid circuitry (and switch reading for probes with switchable gain/attenuation) minimizes ringing and overshoot to provide a precise response.

*Opposite page: PPE Series High Voltage Probe* 

LeCroy High Voltage Probe Model Numbers:

PPE1.2KV PPE2KV PPE4KV PPE5KV PPE6KV PPE20KV The PPE series includes five fixed-attenuation probes covering a range from 2 kV to 20 kV, and one switchable probe providing  $\div$ 10/ $\div$ 100 attenuation for voltage inputs up to 1.2 kV. All fixed-attenuation, standard probes automatically rescale compatible LeCroy oscilloscopes for the appropriate attenuation of the probe.

#### **Features**

- Safe, accurate high-voltage measurement
- 1.2 kV to 20 kV

# **OPTICAL PROBES**

LeCroy's wide-band multi-mode optical-to-electrical converters are designed for measuring optical communications signals. Their broad wavelength range and multi-mode input optics make these devices ideal for applications including Gigabit Ethernet, Fibre Channel, and ITU telecom standards.

The OE695G is compatible with WaveMaster 8 Zi/Zi-A, LabMaster 9 Zi-A, and LabMaster 10 Zi oscilloscopes. Connection to a real-time LeCroy oscilloscope is through the 2.92mm interface, with a provided adapter to connect to ProLink interfaces.

The OE425 and OE455 are ProBus modules compatible with WaveRunner Xi/Xi-A, WaveRunner 6 Zi, WavePro 7 Zi/Zi-A oscilloscopes, as well as WaveMaster 8 Zi/Zi-A and LabMaster 9 Zi-A when used with an LPA-BNC adapter. The OE525 and OE555 are ProLink modules compatible with WavePro 7 Zi/Zi-A, WaveMaster 8 Zi/Zi-A, and LabMaster 9 Zi-A oscilloscopes. LeCroy Optical Probe Model Numbers:

### **OE695G**

LeCroy's OE695G wide-band optical-to-electrical converter is ideal for measuring optical datacom and telecom signals with data rates from 622 Mb/s to 12.5+ Gb/s. Connection to a real-time LeCroy oscilloscope is through the 2.92mm interface, with a provided adapter to connect to ProLink interfaces.

### Features

- Compatible with LeCroy WaveMaster 8 Zi/Zi-A, LabMaster 9 Zi-A, and LabMaster 10 Zi oscilloscopes
- Frequency range DC to 9.5 GHz (electrical, -3 dB)
- Reference receiver support from 8GFC to 10GFC FEC, or Custom (<12.5Gb/s)
- Full bandwidth mode (no reference receiver applied)
- 62.5/125 µm multi-mode or single-mode fiber input
- +7 dBm (5 mW) max peak optical power
- Low noise (as low as 25 pW/ $\sqrt{Hz}$ )
- Ideal for Eye Mask, Extinction Ratio, and Optical Modulation Amplitude (OMA) testing

## **Specifications**

Optical Wavelength Range	780 to 1550 nm (calibrated range) 750 to 1650 nm (usable range)
Maximum Modulation Bandwidth	DC to 8.625 GHz (-3 dBe, electrical) DC to 11.64 GHz (-3 dBo, optical) (Reference Receiver Applied) DC to 9.5 GHz (-3 dBe) DC to 12 GHz (-6 dBe) DC to 17 GHz (-14 dBe) (+/-1 dBe passband variations typical, no Reference Receiver Applied)
Reference Receiver Uncertainty	±1.6 dBe up to Fref =0.75*bit rate ±4 dBe 2*bit rate setting (typical) ±0.85 dBe up to Fref =0.75*bit rate ±4 dBe 2*bit rate setting (on matched oscilloscope input channel 4 with 11, 17, 20, 30, 39, 50, 75, 90, or 100 mV/div gain ranges) with purchase of OE695G- REFCAL)
Reference Receiver Settings	8GFC, OC192/STM64,10GBASE-W,10GBASE-R, 10GFC, ITU-T G.975 FEC, ITU-T G.709 FEC, 10GbE FEC, 10GFC FEC, Custom (622 Mb/s to 12.5 Gb/s), None (Maximum Bandwidth)
Noise Equivalent Power	25 pW/√Hz @ 1310 nm (typical) 50 pW/√Hz @ 850 nm (typical) Average noise spectral density 0-10 GHz using most sensitive vertical scale
Rise Time (10-90%)	33 ps (typical, no reference receiver applied)
Connector Type	FC/PC, compatible with 62.5/125 µm Multi-Mode fiber, or mechanically compatible Single-Mode fiber
Maximum Optical Linear Input (1 dB compression point)	-2 dBm (typical), -3 dBm (minimum) at 1550/1310 nm +4 dBm (typical), +3 dBm (minimum) at 850 nm
Maximum Optical Power	+7 dBm (5 mW) Peak

# **OPTICAL PROBES**

### OE425/OE455/OE525/OE555

The O/E converters contain calibration data that can be used to create optical reference receivers for SONET/SDH (up to OC48/STM16), Fibre Channel, Gigabit Ethernet, and other optical standards. This feature is available when the O/E is used on a supported oscilloscope. The universal reference receiver supports any data rate up to 3 GHz and remains calibrated on any channel of the oscilloscope.

### **Features**

- Frequency range to 5 GHz (6 GHz optical)
- 62.5 µm or narrower multi-mode or single-mode fiber input
- Broad wavelength range:
  - 500-870 nm (OE425, OE525)
  - 950-1630 nm (OE455, OE555)
- High responsivity
- Low noise
- Included Accessories: Multi-mode optical fiber jumper FC-FC FC to ST adapter FC to SC adapter

Specifications	OE425/OE525	OE455/OE555

Passive probes are the standard probe provided with most oscilloscopes. Typical passive probes provide a  $\div$ 10 attenuation and feature a high input resistance of 10 M $\Omega$ . This high input resistance means that passive probes are the ideal tool for low frequency signals since circuit loading at these frequencies is minimized. Passive probes are designed to handle voltages of at least 400 V, some as high as 600 V. LeCroy passive probes feature an attenuation sense pin which tells the oscilloscope to scale the waveforms automatically requiring no user input. LeCroy Passive Probe Model Numbers:

> PP005A PP006A PP007-WR-1 PP008-1 PP009-1 PP010-1 PP011-1 PP016

LeCroy Passive Probe Model Numbers:

PP005A PP006A PP007-WR-1 PP008-1 PP009-1 PP010-1 PP011-1 PP016 Each passive probe is recommended for a certain oscilloscope, using the right passive probe with the right oscilloscope means that the probe can be properly compensated across the entire bandwidth. Using probes with a different oscilloscope will only let you compensate for low frequencies.

### **Features**

- Bandwidth from 200 MHz to 500 MHz
- Probe encoding ring for automatic scale factor readout on LeCroy oscilloscopes

# **TRANSMISSION LINE PROBES**

Transmission line probes are a special type of passive probe designed for use at very high frequencies. They replace the high impedance probe cable found in a traditional passive probe with a precision transmission line, with a characteristic impedance that matches the oscilloscope input (50  $\Omega$ ). This greatly reduces the input capacitance to a fraction of a picofarad, minimizing the loading of high frequency signals. A matching network at the tip increases the DC input resistance. While they have lower DC input resistance than a traditional passive probe (usually 500  $\Omega$ ) to 5 k $\Omega$ ), the input impedance of these probes remains nearly constant over their entire frequency range. A traditional  $\div$ 10 passive probe will have a 10 M $\Omega$ ) input impedance at DC, however this impedance drops rapidly with frequency, passing below the input impedance of a transmission line probe at less than 100 MHz.

In some applications, transmission line probes offer advantages over active probes. In addition to being less expensive, their passive design is more robust to over voltage and ESD exposure. They are useful in applications producing fast rising, narrow pulses with amplitudes which exceed the dynamic range of active probes. They also tend to have less parasitic effects on frequency response. A high BW transmission line probe driving a sampling oscilloscope can be used as a "golden standard" in situations when the response of an active probe measurement is questioned. ## **TRANSMISSION LINE PROBES**

LeCroy Transmission Line Probe Model Numbers:

PP066 PP065

#### **PP066**

The PP066 is a high-bandwidth passive probe designed for use with the WaveMaster and other high-bandwidth oscilloscopes with 50  $\Omega$  input termination. This very low capacitance probe provides an excellent solution for higher frequency applications, especially the probing of transmission lines with 20–100  $\Omega$  impedance. The PP066 accommodates a wide range of applications, including probing of analog and digital ICs commonly found in computer, communications, data storage, and other high-speed designs.

#### **Features**:

- Interchangeable attenuator tips
- Signal integrity at high bandwidth
- Standard SMA cable connection
- Ultra low capacitance

#### **PP066 Specifications**

#### **Electrical Characteristics**

Bandwidth	DC to 7.5 GHz
Risetime	< 47 ps
Input Capacitance	< 0.20 pF
Input Resistance	500 $Ω$ (÷10 cartridge)
	1000 $\Omega$ (÷20 cartridge)
Maximum Voltage	15 V rms
Cable Length	1 m

#### **Included with PP0066**

PACC-AD001 SMA to BNC Adapter

# **TRANSMISSION LINE PROBES**

### **PP065**

The PP065 is a transmission line probe designed for use at very high frequencies. The probe's input impedance remains nearly constant over its entire frequency range. Robust to over voltage and ESD exposure, it is particularly useful in applications producing fast rising, narrow pulses with amplitudes, which exceed the dynamic range of active probes.

### **Features**:

- 1 GHz
- Low capacitance
- ÷100 1 GHz 5 k passive probe

### **PP065 Specifications**

Bandwidth	1 GHz
Input Capacitance	1.5 pF
Input Resistance	500 Ω
Maximum Voltage	22 V
Attenuation	÷100

## **Ordering Information**

Product Description	Product Code
7.5 GHz Low Capacitance Passive Probe ( $\div$ 10, 1 k $\Omega$ ; $\div$ 20, 500 $\Omega$ )	PP066
$^{-}$ 1 GHz Low Capacitance Passive Probe (÷10, 5 k $\Omega$ )	PP065
