A Microchip Technology Company

2.4 GHz High-Power, High-Gain Power Amplifier
SST12LP19E

Data Sheet

SST12LP19E is a versatile power amplifier based on the highly-reliable InGaP/ GaAs HBT technology. SST12LP19E is a 2.4 GHz fully-integrated, high-power, high-gain Power Amplifier module designed in compliance with IEEE 802.11b/g/n applications. It typically provides 25 dB gain with 34% power-added efficiency. SST12LP19E has excellent linearity while meeting 802.11g spectrum mask at 23.5 dBm and 802.11b spectrum mask at 23 dBm. This power amplifier includes a power detector with dB-wise linear voltage output and features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin. SST12LP19E and is offered in both 6- and 8-contact XSON packages.

Features

- **Excellent RF Stability with Moderate Gain:**
  - Typically 25 dB gain across 2.4 – 2.5 GHz
- **High linear output power:**
  - >26 dBm P1dB
    - Please refer to “Absolute Maximum Stress Ratings” on page 6
  - Meets 802.11g OFDM ACPR requirement up to 23.5 dBm
  - ~2.5% added EVM up to 18 dBm (high-efficiency configuration) or ~3% added EVM up to 19.5 dBm (high-power configuration) for 54 Mbps 802.11g signal
  - Meets 802.11b ACPR requirement up to 23 dBm
- **High power-added efficiency/Low operating current for 802.11b/g/n applications**
  - ~34%/200 mA @ P_{OUT} = 23.5 dBm for 802.11g
  - ~31%/195 mA @ P_{OUT} = 23 dBm for 802.11b
- **Single-pin low I_{REF} power-up/down control**
  - I_{REF} <2 mA
- **Low idle current**
  - ~40-65 mA I_{CQ}, depending on package type and configuration.
- **High-speed power-up/down**
  - Turn on/off time (10%- 90%) <100 ns
  - Typical power-up/down delay with driver delay included <200 ns
- **Low Shut-down Current (~2 µA)**
- **High temperature stability**
  - ~1 dB gain/power variation between 0°C to +85°C
- **Excellent On-chip power detection**
  - 20 dB dynamic range on-chip power detection
  - dB-wise linear output voltage
  - Temperature stable and load insensitive
- **Simple input/output matching**
- **Packages available**
  - 8-contact XSON – 2mm x 2mm
  - 6-contact XSON – 1.5mm x 1.5mm
- **All non-Pb (lead-free) devices are RoHS compliant**

Applications

- **WLAN (IEEE 802.11b/g/n)**
- **Home RF**
- **Cordless phones**
- **2.4 GHz ISM wireless equipment**

Product Description

SST12LP19E is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology.

SST12LP19E can be easily configured for high-power applications with good power-added efficiency while operating over the 2.4- 2.5 GHz frequency band. It typically provides 25 dB gain with 34% power-added efficiency (PAE) @ P_{OUT} = 23.5 dBm for 802.11g and 31% PAE @ P_{OUT} = 23 dBm for 802.11b.

This device has excellent linearity, typically ~3% added EVM at 19.5 dBm output power which is essential for 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 23.5 dBm and 802.11b spectrum mask at 23 dBm.

SST12LP19E can also be easily configured for high-efficiency operation, typically ~2.5% added EVM at 18 dBm output power and 92 mA total power consumption for 54 Mbps 802.11g applications. High-efficiency operation is desirable in embedded applications, such as in hand-held units, where SST12LP19E can provide 25 dB gain and meet 802.11b/g/n spectrum mask at 22 dBm output power with 34% PAE.

This power amplifier also features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin. Ultra-low reference current (total I_{REF} ~2 mA) makes the SST12LP19E controllable by an on/off switching signal directly from the baseband chip. These features coupled with low operating current make the SST12LP19E ideal for the final stage power amplification in battery-powered 802.11b/g/n WLAN transmitter applications.

SST12LP19E has an excellent on-chip, single-ended power detector, which features wide-range (>15 dB) with dB-wise linear output voltage. The excellent on-chip power detector provides a reliable solution to board-level power control.

The SST12LP19E is offered in both 8-contact XSON and 6-contact XSON packages. See Figure 3 for pin assignments and Tables 1 and 2 for pin descriptions.

Electrical Specifications

The RF and DC specifications for the power amplifier interface signals. Refer to Table 4 for the DC voltage and current specifications. Refer to Figures 4 through 14 for the RF performance.

Absolute Maximum Stress Ratings (Applied conditions greater than those listed under "Absolute Maximum Stress Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Input power to pin 2 (P_{IN}) . . . . . +5 dBm
Average output power from pins 6 and 7 (P_{OUT})[1] for 8-contact XSON . . . . . +26 dBm
Average output power from pin 6 (P_{OUT})[1] for 6-contact XSON . . . . . +26 dBm
Supply Voltage to pins1, 3, and 8 (V_{CC}) for 8-contact XSON . . . . . -0.3V to +4.6V
Supply Voltage to pins 1, 3, and 6 (V_{CC}) for 6-contact XSON . . . . . -0.3V to +4.6V
Reference voltage to pin 4 (V_{REF}) . . . . . -0.3V to +3.3V
DC supply current (I_{CC})[2] . . . . . 400 mA
Operating Temperature (T_A) . . . . . -40ºC to +85ºC
Storage Temperature (T_{STG}) . . . . . -40ºC to +120ºC
Maximum Junction Temperature (T_J) . . . . . +150ºC
Surface Mount Solder Reflow Temperature . . . . . 260°C for 10 seconds

1. Never measure with CW source. Pulsed single-tone source with <50% duty cycle is recommended. Exceeding the maximum rating of average output power could cause permanent damage to the device.
2. Measured with 100% duty cycle 54 Mbps 802.11g OFDM Signal

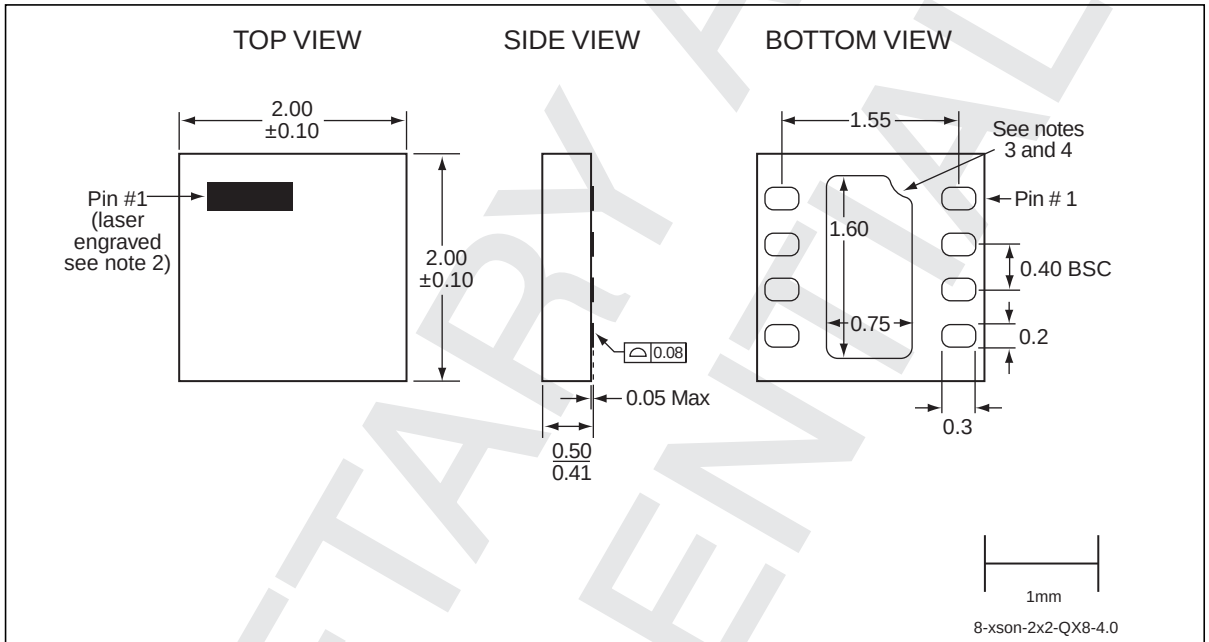
Packaging Diagrams



Note:
1. Similar to JEDEC JEP95 XQFN/XSON variants, though number of contacts and some dimensions are different.
2. The topside pin #1 indicator is laser engraved; its approximate shape and location is as shown.
3. From the bottom view, the pin #1 indicator may be either a curved indent or a 45-degree chamfer.
4. The external paddle is electrically connected to the die back-side and to V_{SS}.
   This paddle **must** be soldered to the PC board; it is required to connect this paddle to the V_{SS} of the unit.
   Connection of this paddle to any other voltage potential **will** result in shorts and electrical malfunction of the device.
5. Untoleranced dimensions are nominal target dimensions.
6. All linear dimensions are in millimeters (max/min).
