

### Low-cost DIP Switch with Slide Pins

- Allows automatic mounting with DIP IC insertion machines
- Washable models with seal tape are available
- SMT (surface-mounted terminal) models are available with/without embossed tape

### Ordering Information

# Specifications

## RATINGS/CHARACTERISTICS

Switching capacity	25 mA at 24 VDC	
Insulation resistance	100 MΩ min. (at 250 VDC)	
Contact resistance	200 mΩ max. (initial value)	
Dielectric strength	500 VAC for 1 min between terminals of same polarity, and between terminals of different polarity	
Vibration resistance	Malfunction: 10 to 55 Hz, 1.5-mm double amplitude	
Shock resistance	Malfunction: 300 m/s <sup>2</sup> min. (approx. 30G min.)	
Life expectancy	Mechanical	1,000 operations min.
	Electrical	1,000 operations min.
Ambient temperature	Operating	-20°C to 70°C (with no icing)
Ambient humidity	Operating	35% to 90%
Operating force	0.29 N min. (30 gf)	

## Dimensions

Unit: mm

Note: Unless otherwise specified, a tolerance of ±0.4 mm applies to all dimensions.

# Installation

## INTERNAL CONNECTIONS (TOP VIEW)

# Precautions

## CIRCUIT DESIGN

Use the DIP Switch within the rated voltage and current ranges, otherwise the DIP Switch may have a shortened life expectancy, radiate heat, or burn out.

## MOUNTING

Do not operate the DIP Switch while mounting, soldering, or washing the DIP Switch, otherwise the DIP Switch may deform due to the heat of the solder, the DIP Switch may malfunction due to the penetration of the washing agent, or the machine incorporating the DIP Switch may operate or be set incorrectly.

An automatic insertion machine incorporating a body stopper is available for mounting the DIP Switch. When using an automatic insertion machine incorporating a half-lead stopper to mount the DIP Switch, make sure that the automatic insertion machine will not deform the terminals of the DIP Switch, otherwise the improper insertion of the DIP Switch may result. Deformation of the terminals of the DIP Switch, otherwise the improper insertion of the DIP Switch may result.

## SOLDERING

Observe the following conditions when soldering the DIP Switch.

### Automatic Soldering Bath

Soldering temperature: 350°C at the tip of the soldering iron.  
Soldering time: 3 s max. for a 1.6-mm thick, single-side PCB.

## Reflow Soldering

## Manual Soldering

Soldering temperature: 350°C at the tip of the soldering iron.  
Soldering time: 3 s max. for a 1.6-mm thick, single-side PCB

Set the pins of the DIP Switch to OFF before soldering the DIP Switch.

Before soldering the DIP Switch on a PCB, make sure that there is no unnecessary space between the DIP Switch and PCB.

Before soldering the DIP Switch on a multilayer PCB, make sure that the DIP Switch will not be deformed by the soldering heat on the pattern or land of the multilayer PCB.

Do not solder the DIP Switch more than twice including rectification soldering. An interval of five minutes is required between the first and second solderings.

Make sure that there is no flux rise on the surface of the PCB.

**NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.**
