Description

RM46 controlCARDS from Texas Instruments are ideal products for initial software development and short run builds for system prototypes, test stands, and many other projects that require easy access to high-performance controllers. The controlCARDS are complete board-level modules that utilize an industry-standard DIMM form factor to provide a low-profile single-board controller solution. controlCARDS use the same 100-pin connector footprint to provide the analog and digital I/Os on-board controller and are reasonably interchangeable. The RM46CNCD board operates from an external power supply provided via the barrel connector located on the top-front of the card. The expected voltage for the control card is 6.0V to 30.0V as per the input capability of the TPS65381. The control card can be used as part of a motor control kit and offers additional control, connectivity and safety evaluation features.

Features

The TMDXRM46CNCD is meant for use as part of a motor control kit and offers additional control, connectivity and safety evaluation features.

Key features include:

- A Texas Instruments RM46L852 337-ball BGA microcontroller
- A Texas Instruments TPS65381 Safety-Integrated Power Companion
- On board, isolated USB XDS100v2 JTAG emulator
- Optional path to EVM JTAG connector (via DIMM)
- Hardware option for routing N2HET timers or ePeripherals to the DIMM interface – includes HET monitoring of ePeripheral outputs
- 10/100 Mbps Ethernet interface via RJ-45 with same PHY as on the TMDXRM46HDK
- Isolated UART/SCI accessible through a USB Virtual Port (VCP)
- Ignition cycle simulator switch S2 – serves as system reset of TPS and MCU
- LPO_TEST (SW3) push button switch (causes CLKDET hardware fault on MCU)
- LED indicators for xds100 power, activity, target/MCU power, GIOB7 pin activity, Ethernet link and activity, Ethernet speed, and nERROR.
- Soft Reset pushbutton (nRST)
- On board power supply supporting a 6V – 30V DC input and producing the 6V, 3.3V and 1.2V for the MCU

What's Included

The CNCD is made available as part of the DRV8301-RM46-KIT or orderable standalone as TMDXRM46CNCD. The kit contains everything needed to develop and run brushless DC motor control applications utilizing Hercules Safety MCUs. For more information on the kit, please see

www.ti.com/tool/drv8301-RM46-kit. The stand-alone card is shipped with a DVD containing:

- TI GUIComposer runtime environment
- TI MotorWare motor control CCS5 example projects for redundant SMO and Encoder based FOC as well as InstaSPIN™-BLDC
- GUI applications demonstrating the MotorWare projects (as tested on the DRV8301)
- MotorWare™ Documentation
- Hardware Documentation
- HALCoGen
- nowFlash
- nowECC
