

Overview

First 90^o turn: Cam rotates behind frame

The door is now **latched** against opening

Then as you complete the half-turn motion, the shaft and cam compress to pull the door snugly against the frame or gasket into the **locked** position

Versatility and simplicity in action

Every *SOUTHCO® VISE ACTION®* Series latch solution starts with the single-turn latching and compressing action that is built into each model. At the heart of it all is our *VISE ACTION®* design that has proven itself in millions of installations.

Product features

- Suitable for a wide range of load configurations
- Excellent corrosion resistance
- Durable and reliable operation
- Multiple size, material and access configurations
- Compression achieved with minimal manual torque
- Suitable for NEMA4 / IP65 applications

Match material and finish options for style and functionality requirements

Variety of materials and finishes to complement your application. Die-cast zinc latch bodies standard finishes:

Black powder coated

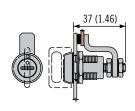

Silver powder coated

Stainless steel latch bodies are made by metal injection molding or precise machining.

Select one of these four housing styles to fit your access requirements

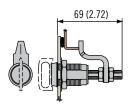

A series of basic housing styles of the *VISE ACTION®* compression latch have been developed to meet specific door configuration and mounting requirements - for depth, thickness, strength, grip dimension, and surface protrusion.

- **C** Right and left hand actuation
- Optional pre-assembled cam for quick installation
- Wide choice of accessories

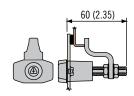

Small

 Optimum compression for use in confined space applications

Large

- Largest choice of head styles
- Max. grip range in door to frame spacing
- Minimal protrusion style available

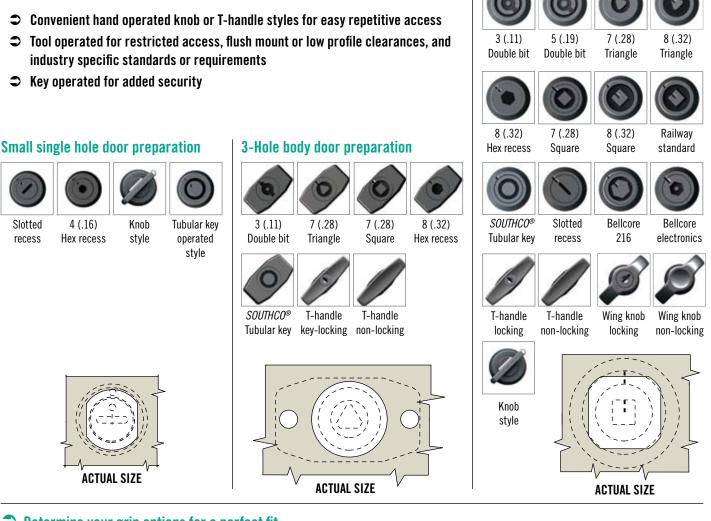

3-Hole Mount

- Simplified round-hole mounting
- Suitable for thick, soft or weak panels

CLIC

Determine your grip options for a perfect fit

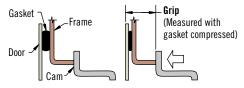

Choose from a wide range of head styles to fit your application and

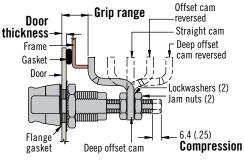

industry requirements

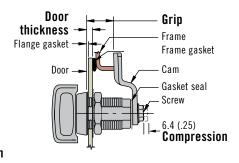

Grip dimension is an important consideration in compression latch applications involving gaskets for environmental or RFI sealing.

For gasketed doors:

ONNECT - CREATE - INNOVAT

Large single hole body door preparation

Adjustable cam designs

- Maximum flexibility in tolerance or gasket compression
- Cam choice to suit a broad range of grip dimensions

Fixed cam designs

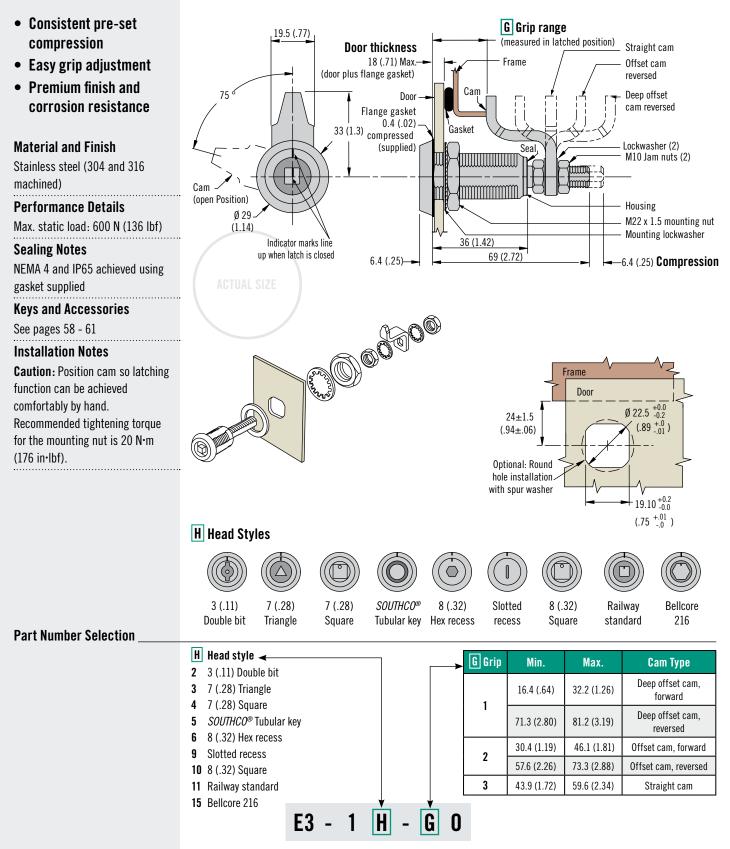

- Precise fit and minimum internal protrusion
- Wide cam selection for accurate grip dimension

Material and Finish

HOUSING and CAP: Die-cast zinc, bright chrome plated or powder coated, see table. **RETAINER and SPRING: 302 Stainless steel,** natural. O-RING: Buna-N rubber, natural. CAM and SLEEVE: 1075 Case hardened steel, zinc immersion coating. SHAFT and SCREW: Low carbon steel, zinc plate, chromate plus sealer. PIN: 1008 Steel, zinc plated plus chromate dip. MOUNTING WASHER, MOUNTING NUT and PAWL: 1010 steel, zinc plate, chromate plus sealer.

Product Strength Guidelines

(To assist in your product selection; samples are available for your evaluation.)

Maximum static load: 300 N (79 lbs.) Average ultimate load: 700 N (157 lbs.)

These loads apply to latch assemblies only. Retention to the panel is subject to user method of installation and material.

Installation

- 1. Insert the latch through the rear of the door. Place the mounting washer then the mounting nut onto the latch.
- 2. Adjust mounting nut so that the head of the latch is flush with the outside of the door. The holes in the washer and the nut must be aligned. The latch must be aligned to the latching position. Southco recommends using a minimum of three mounting screws in a pattern as shown above.
- 3. Place pawl on latch shaft and tighten pawl mounting screw while holding the pawl with a 17 (.67) wrench.

Recommended tightening torque for the Pawl Mounting Screw is 10 N•m (88.5 in-lbs).
