

## High-Speed N-Channel Power MOSFET

### Features:

- Low Drain-to-Source On Resistance ( $R_{DS(ON)}$ )
- Low Total Gate Charge ( $Q_G$ ) and Gate-to-Drain Charge ( $Q_{GD}$ )
- Low Series Gate Resistance ( $R_G$ )
- Fast Switching
- Capable of Short Dead-Time Operation
- RoHS Compliant

### Description:

The MCP87018 is an N-Channel power MOSFET in a popular PDFN 5 mm x 6 mm package. Advanced packaging and silicon processing technologies allow the MCP87018 to achieve a low  $Q_G$  for a given  $R_{DS(on)}$  value, resulting in a low Figure of Merit (FOM). Combined with low  $R_G$ , the low FOM of the MCP87018 allows high efficiency power conversion with reduced switching and conduction losses.

### Applications:

- Point-of-Load DC-DC Converters
- High Efficiency Power Management in Servers, Networking and Automotive Applications

## 4.0 PACKAGING INFORMATION

### 4.1 Package Marking Information\*

8-Lead PDFN (5x6x1.0 mm)

Example

\*RoHS compliant using EU-RoHS exemption: 7(a) – Lead in high-melting-temperature-type solders (i.e., lead-based alloys containing 85% by weight or more lead) can be found on the outer packaging for this package.

<b>Legend:</b>	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
