

PmodTPH2 - 12-pin test point header

Connector(s): Two 12-pin pass-through headers, one 12-pin test header

Test points for use with the Digilent 12-pin (2x6) PMod connection protocol

Ships with a 6" 12-pin cable, a 6" 2x6-pin to dual 6-pin cable, one 12-pin header, and two 6-pin headers

The Digilent PmodTPH2 Test Point Header Module Board (the TPH2) is an ideal way to test the connection between a Pmod and system board with 12-pin (2x6) connectors loaded. It simply passes signals from the J1 connector to the J2 connector, providing test-point access via the J3 header.
