Connectix faceplates are available in standard or compact sized single and dual versions, and have been designed to fit all industry standard modules. An Elite version with a sleek curved look is also available for high end applications.

All faceplates are supplied with fixing screws. They are finished as standard in an attractive high gloss white. Grey faceplates are also available for when a high contrast is required between the mounting surface and the outlet (as specified in the Disability Discrimination Act).

Connectix backboxes are available in single and dual gang with a choice of surface mounted and flush mounted dry lined wall versions. Surface mount boxes feature knock outs for mini trunking adaptors.

Dry lining wall boxes are suitable for mounting into 6-14 mm thick board and can easily cope with irregular shaped aperture sizes. Swivelling snap out clamps will grip any standard thickness of building board tightly.
