## **Functions and Features**

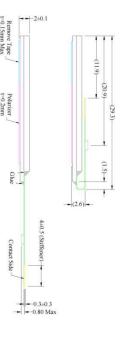

- 256X64 Graphic
- Built-in controller
- viewing angle Free
- Wide Temperature  $-40^{\circ}$ C  $\sim +85^{\circ}$ C (Operating)
- RoHS compliant

# **Mechanical Specification**

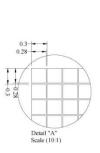

Item	Description	
Product No.	0 A	
Inch	3.12"	
Color	Green	
Active Area	76.78(W)×19.18(H)	mm
Panel Size	88.00(W)×27.80(H)×2.00(D)	mm
Dot Size	0.28(W)×0.28(H)	mm
Dot Pitch	0.3(W)×0.3(H)	mm
Display Format	256×64	
Duty Ratio	1/64 Duty	Duty
Controller	SSD1322 or Equivalent	
Operation Temperature	-40~85	°C
Storage Temperature	-40~90	°C
Response Time	≤10	us
Assembly	Connector

30	N.C. (GND)

Symbol N.C. (GND) VSS

#### Notes:

- 1. Color: White
- 2. Driver IC: SSD1322 3. Die Size: 12374um x 1526um
- 4. COF Number: SSD1322U

5. Interface: 8-bit 68XX/80XX Parallel, 3-/4-wire SPI

- 6. General Tolerance: ±0.30
- The total thickness (2.10 Max) is without polarizer protective film & remove tape.
   The actual assembled total thickness with above materials should be 2.35 Max.

# **Pin Description**

#### **Power Supply**

Pin Number	Symbol	Туре	Function
			Power Supply for Operation
26	VCI		This is a voltage supply pin. It must be connected to external source &
			always be equal to or higher than VDD & VDDIO.
			Power Supply for Core Logic Circuit
25	VDD		This is a voltage supply pin. It can be supplied externally (within the range
25	VUU		of 2.4~2.6V) or regulated internally from VCI. A capacitor should be
			connected between this pin & VSS under all circumstances.
			Power Supply for I/O Pin
			This pin is a power supply pin of I/O buffer. It should be connected to
24	VDDIO		VDD or external source. All I/O signal should have VIH reference to
		Р	VDDIO. When I/O signals pins (BS0~BS1, D0~D7, control signals) pull
			high, they should be connected to VDDIO.
			Ground of Logic Circuit
2	VSS		This is a ground pin. It also acts as a reference for the logic pins. It must
			be connected to external ground.
			Power Supply for OEL Panel
3,29	VCC		These are the most positive voltage supply pin of the chip. They must be
			connected to external source.
			Ground of Analog Circuit
5,28	VLSS		These are the analog ground pins. They should be connected to VSS
			externally.

#### Driver

Pin Number	Symbol	Туре	Function
			Current Reference for Brightness Adjustment
22	IREF	ı	This pin is segment current reference pin. A resistor should be connected
			between this pin and VSS. Set the current lower than 10uA.
			Voltage Output High Level for COM Signal
4	VCOMH	Р	This pin is the input pin for the voltage output high level for COM signals.
			A tantalum capacitor should be connected between this pin and VSS.
			Voltage Output Low Level for SEG Signal
27	VCI		This is segment voltage reference pin. When external VSL is not used,
27	VSL	VSL P	this pin should be left open. When external VSL is used, this pin should
			connect with resistor and diode to ground.

#### **Testing Pads**

Pin Number	Symbol	Туре	Function
			Current Reference for Brightness Adjustment
21	FR	0	This pin is segment current reference pin. A resistor should be connected
			between this pin and VSS. Set the current lower than 10uA.

#### Interface

Symbol	Туре	Function							
		Communicating Protocol Sele	Communicating Protocol Select						
		These pins are MCU interface s	selection input.	See the following table:					
DCO			BS1	BS2

When serial or I2C of the CS# is pulled low. When serial or I2C of the CS# is pulled low. When serial or I2C of the CS# is pulled low. When serial or I2C of the CS# is pulled low.					

			Host Data Input/output Bus
			These pins are 8-bit bi-directional data bus to be connected to the
6~13	D7~D0	I/O	microprocessor's data bus. When serial mode is selected, D1 will be the
			serial data input SDIN and D0 will be the serial clock input SCLK. Unused
			pins must be connected to VSS except for D2 in serial mode.

#### Reserve

Pin Number	Symbol	Туре	Function
			Reserved Pin
23	N.C.	-	The N.C. pin between function pins is reserved for compatible and flexible
			design.
	N.C		Reserved Pin (Supporting Pin)
1,30	N.C.	-	The supporting pins can reduce the influences from stresses on the
	(GND)		function pins. These pins must be connected to external ground.

## **Block Diagram**

MCU Interface Selection: BS0 and BS1

Pins connected to MCU interface: D7~D0, E/RD#, R/W#, D/C#, CS#, and RES#

C1, C3, C5:  $0.1 \mu$  F C2, C4:  $4.7 \mu$  F C6:  $10 \mu$  F C7:  $1 \mu$  F

C8:  $4.7 \mu$  F / 25V Tantalum Capacitor

R1:  $680k\Omega\Box$ , R1 = (Voltage at IREF – VSS) / IREF

R2:  $50 \Omega$ , 1/4WD1: 2.4V, 0.5W

### **DC Characteristics**

Item	Symbol	Condition	Min.	Туре	Max.	Unit
Supply Voltage for Operation	Vcı		2.4	2.8	3.5	Volt
Supply Voltage for Logic	Vdd		2.4	2.5	2.6	Volt
Supply Voltage for I/O Pins	VDDIO		1.65	1.8	VCI	Volt
Supply Voltage for Display	Vcc	Note 3	11.5	12	12.5	Volt
Operating Current for VCI	Icı		-	1.8	2.25	mA
On a rational Command for VCC	laa	Note 4	-	26.3	32.9	mA
Operating Current for VCC	Icc	Note 5	-	41.1	51.4	mA
Sleep Mode Current for VCI	Icı,SLEEP		-	1	5	μA
Sleep Mode Current for VCC	Icc,SLEEP		-	1	5	μA

Note 3: Brightness (Lbr) and Supply Voltage for Display (VCC) are subject to the change of the panel characteristics and the customer's request.

Note 4: VCI = 2.8V, VCC = 12V, 50% Display Area Turn on.

Note 5: VCI = 2.8V, VCC = 12V, 100% Display Area Turn on.

# **Optical Characteristics**

Item	Symbol	Conditions	Min.	Тур	Max.	Unit
Brightness(Green)	Lbr	1		120	-	cd/m²
C.I.E. (Green)	(X)	C.I.E	0.27	0.31	0.35	
	(Y)	O.I.E	0.58	0.62	0.66	
Dark Room Contrast	CR	-	-	>10000:1	-	
Viewing anglerange	-	-	-	Free	-	Degree

<sup>\*</sup> Optical measurement taken at VDD = 2.8V, VCC = 12V.

## **Absolute Maximum rating**

Item	Symbol	Min.	Тур.	Max.	Unit	Notes
Supply Voltage for Operation	VCI	-0.3	-	4	Volt	1,2
Supply Voltage for Logic	VDD	-0.5	-	2.75	Volt	1,2
Supply Voltage for I/O Pins	VDDIO	-0.5	-	VCI	Volt	1,2
Supply Voltage for Display	Vcc	-0.5	-	16	Volt	1,2
Life Time (60 cd/m²)			100,000		Hour	

Note 1: All the above voltages are on the basis of "VSS = 0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section. "Optics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

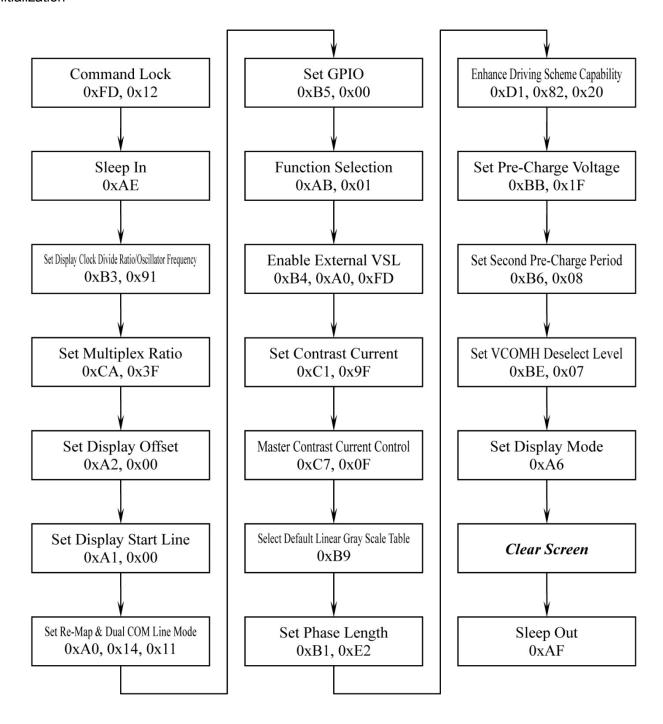

#### **AC Characteristics**

Please refer "SSD1322 specification.

### **Actual Application Example**

Command usage and explanation of an actual example

<Initialization>

If the noise is accidentally occurred at the displaying window during the operation, please reset the display in order to recover the display function.
