STD3PK50Z

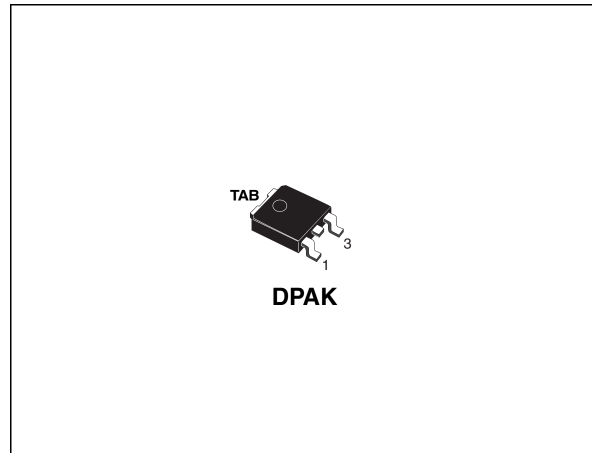
P-channel 500 V, 3 Ω typ., 2.8 A Zener-protected SuperMESH™ Power MOSFET in a DPAK package

Datasheet — production data

Features

Order code	V_{DSS}	$R_{DS(on)}max$	I_D	P_{TOT}
STD3PK50Z	500 V	< 4Ω	2.8 A	70 W

- Gate charge minimized
- Extremely high dv/dt capability
- 100% avalanche tested
- Very low intrinsic capacitance
- Improved ESD capability



Applications

- Switching applications

Description

This device is a P-channel Zener-protected Power MOSFET developed using STMicroelectronics' SuperMESH™ technology, achieved through optimization of ST's well established strip-based PowerMESH™ layout. In addition to a significant reduction in on-resistance, this device is designed to ensure a high level of dv/dt capability for the most demanding applications.

The built-in back- to-back Zener diodes have specifically been designed to enhance not only the device's ESD capability, but also to make them safely absorb possible voltage transients that may occasionally be applied from gate to source. In this respect the Zener voltage is appropriate to achieve an efficient and cost-effective intervention to protect the device's integrity. These integrated Zener diodes thus avoid the usage of external components.

Note: For the P-channel Power MOSFETs actual polarity of voltages and current has to be reversed.
