

## Filter Logic FL-ZAX2 is a compatible replacement cartridge for QL1-Zip/Everpure Water Filter (Part No. 91240)

Below is a brief overview of the cartridge procedure for your Zip Hydro Tap water filter system. For full instructions please refer to page 21 of your Zip Hydro Tap user manual.

When the cartridge is due to be replaced, the 'Filter Status' light will begin to flash white every minute and will continue to do so until the system has been reset. The change filter light can be found on the tap head assembly between the blue and red lights.

When replacing the filter it is important to keep a bucket and towel handy to mop up any spillage or catch any drips if water leaks from the filter head.

### Instructions to change the filter

- 1 Isolate the water supply by selecting 'Flush Filter Off' via the on-screen menu of the control panel.
- 2 Open the door on the left and hold the cartridge firmly, twisting it one quarter-turn to the right until it stops.
- 3 Detach the cartridge from the filter head by gently easing the filter downwards (to prevent dirty water spilling from the socket, avoid tilting the cartridge at an angle).
- 4 On the label of the new cartridge write today's date.
- 5 To avoid bacterial contamination of the new cartridge, try not to touch the filter opening or the 'O'-rings.
- 6 Ensure the tabs of the cartridge are aligned with the slots underneath the filter head and push the cartridge up into the filter head, turning it from left to right until it stops.
- 7 Flush the new cartridge for a minimum of 5 minutes by opening the flush hose tap lever (refer to your Zip Hydro Tap manual if you are uncertain where to find the flush filter hose or activate the flush filter procedure from the control panel).
- 8 Reset the litre counter by selecting 'Litres Filtered' and reset the timer by selecting 'Filter Used (Days)' via the on screen menu.
- 9 Check for leaks and secure the appliance by closing the door. Continue to check for leaks as part of your regular maintenance schedule.

**WARNING:** Should your Zip Hydro Tap appliance remain unused for a prolonged period (e.g. 2 days or more), flush water through the chilled water outlet for a minimum of 5 minutes prior to drinking.

FOR ADDITIONAL INFORMATION RELATING TO THE CARTRIDGE CHANGE PROCEDURE PLEASE REFER TO YOUR ZIP HYDRO TAP USER MANUAL.
