

Product Number: CY8CKIT-009A

PSoC® CY8C38 Family Processor Module Kit

The PSoC® CY8C38 Family Processor Module is designed to evaluate and experiment with Cypress's PSoC 3 programmable system-on-chip design methodology and architecture. This processor module can be used in conjunction with the PSoC Development Kit (CY8CKIT-001) to create designs utilizing on-board DVK resources or compatible expansion boards. This kit provides you with an additional processor module to use with different projects.

Note: *The PSoC 3 Processor Module (CY8CKIT-009) is equipped with ES2 silicon. Our Production silicon is now available, and we would like to offer our customers the opportunity to upgrade their Kits with our production silicon. This upgrade is free of charge to our valued customers.*

The kit contains:

- PSoC® CY8C38 Family Processor Module
- Kit CD, which includes: PSoC Creator™, PSoC Programmer, and Documentation
