Solder Pot - 2 lb. capacity, Electronic

SP-EL

Plato shears have a thin profile designed for those hard-to-reach areas in electronic assembly. Assemblers love the effortless shearing action, comfort, light weight, and safety for electronics lead and wire cutting. Plato shears use the sheared cutting method, which requires 50% less operator effort and extends cutting life because they shear rather than pinch. Handles are cushioned for day long comfort, and automatically spring back to their original position after each use.

Plato solder pots are ideal for tinning lead wires, pre-tinning small electrical parts, or dip soldering small assemblies and circuit devices. Porcelain Coated Crucibles Plato's porcelain coated crucible is easy to clean and offers a long service life. Solder will not adhere to the porcelainized surface, allowing for easy maintenance. The coating also resists the corrosion common with activated fluxes and high tin content solders. All Plato solder pots can be ordered with a porcelain coated crucible by adding a “P” to the end of the part number.

Precision electronic controlled solder pots

Plato's Precision Solder Pots exceed the requirements of military specifications ANSI (J-STD-001B). The pots control temperatures to ±5°F (±2.75°C) of a preselected setting from ambient to 925°F (496°C) and have an LCD temperature display.

- Safety heat shield
- Removable dross tray for easy cleaning
- 2.5” (64mm) diameter by 1.5” (38mm) deep crucible
- LCD that displays preset temperature and operating temperature
- Limits transient voltage spiking to 2mV peak-to-peak or less for voltage sensiti
