# **DeoxIT®** M260 Greases Mechanical & Electrical Greases

# Product Description: CAIG offers two types of DeoxIT® Greases (Mineral-based and Litium-based)

**DeoxIT® Greases** are manufactured in semi-solid form for use as a combination cleaning, deoxidizing, protecting and lubricating preparation. Greases protect against oxidation (galvanic corrosion) and are free of mineral acids, sulphurs, alkalis and other noxious components aggressive to metals. DeoxIT® Greases improve performance of electrical contacts and mechanical components that require precise lubrication.

**DeoxIT® Grease Type M260 - Mineral-based preparation.** Excellent lubrication, good wear resistance, excellent oxidation (galvanic corrosion) protection and good dripping-point characteristics. Operating temperatures: -40°C to 260°C

**DeoxIT® Grease Type L260 - Lithium-based preparation.** Good lubrication, excellent wear resistance, excellent pressure resistance, excellent oxidation (galvanic corrosion) protection, high dripping-point characteristics. Operating temperatures: -40°C to 260°C.

#### Grease Types: DeoxIT® Greases are offered with or without paricles.

- 1. NO particles = Soft, thixotropic grease for lubrication and protection of surfaces. Maximum lubrication for relatively clean surfaces.
- 2. COPPER particles (M260Cp and L260Cp) = Use when you require particles (conductive) to assist in oxide and corrosion breakup and need good lubrication. Copper is conductive. Use in areas that two contacts will not touch and possibly short. Example: disconnect switches or large connectors and relays.
- **3.** ALUMINUM particles (M260Ap and L260Ap) = Use when aluminum metals are involved. Use in areas that two contacts will not touch and possibly short. Example: aluminum rails, bolts, connectors.
- **4. GRAPHITE particles (M260Gp and L260Gp)** = Graphite provides excellent lubricating and heat transfer characteristics. Use where lubrication is vital and heat absorption and dissipation is important.
- 5. QUARTZ (M260Qp and L260Qp) = Use when you need particles (non conductive) to assist in oxide break up and you require good lubrication and heat abrasion. Quartz particles assist in breaking up oxidation and corrosion. Quartz is nonconductive.
- 6. GRAPHITE/QUARTZ (M260GQp and L260GQp) = Use when heat transfer, lubrication and assistance is needed in breaking up oxides and corrosion. Finer particles than the copper.
- 7. **TEFLON (M260Tp and L260Tp)** = Use when lubrication is essential. Teflon particles are nonconductive.
- 8. CUSTOM FORMULATIONS = Contact a CAIG Associate; http://store.caig.com/s.nl/it.l/id.7/.f

Product	Heat	Water	Oxidation	Oxidation
	Resistance	Resistance	Resistance *	Dissolving
DeoxIT® M260	Excellent	Good	Excellent	Good
DeoxIT® L260	Excellent	Excellent	Excellent	Good
Lithium	Good	Good	Fair	Poor
Lithium Complex	Excellent	Excellent	Fair	Poor
Complex	Excellent	Excellent	Fair	Poor
Bentone Clay	Excellent	Good	Good	Poor
Polyurea	Excellent	Excellent	Good	Poor

\* Oxidation of lubricants can produce sludge, varnish, gum and acid.

#### Features/Benefits:

#### Safe on Plastics.

Mineral-based preparation.

Excellent lubrication, good wear resistance, excellent oxidation (galvanic corrosion) protection and good dripping-point characteristics.

#### **Uses:**

#### **Electrical:**

Antenna connections, battery terminals, Buss bars, commutators, conductor rails, conductors, contactors, disconnects, drying & processing equipment, high amperage/high voltage applications, industrial electrical equipment (lifts, cranes, robotics, etc.), power tools, relays & switches (heavy duty, knife, step, rotary), etc.

#### Mechanical:

Bearings (all types), doors (closures), drives (chain/sprockets), hatch closures, O-rings and seals, linear motion systems, plugs (threaded holes), rack & pinion assemblies, screw devices (jacks, rails), slide bushings, sliding parts, tracks/guides/rails, threaded closures, worm gears, etc.

#### **Directions for Use:**

- 1. Turn off, unplug the device.
- 2. Clean/remove grease, dirt and other contaminations from the surfaces. Use a contact cleaner or degreaser (CAIG Labs., Part No DCC-V510 or DDW-V610).
- 3. Select which DeoxIT<sup>®</sup> Grease (with or without particles, see Page 1) is required for your application.
- 4. In extreme environmental conditions (salt, humidity, acidic, pollution), pre-treating with DeoxIT<sup>®</sup> Shield S-Series may be recommended.
- 5. Once surfaces are clean and pre-treated with DeoxIT<sup>®</sup> Shield (if required), apply DeoxIT<sup>®</sup> Grease onto the surfaces.
- 6. As an external environmental barrier (i.e. antenna connections, audio/video connections, etc.), apply liberally onto the entire surface.
- 7. For surface that require particles (i.e. disconnect knife switches, etc.), apply a small amount to the metal surfaces, then operate the switch to assist in break up of oxidation and corrosion. A second application may be required.
- 8. Turn on or energize the part/system.
- 9. For additional information or unique applications, contact a CAIG Associate; http://store.caig.com/s.nl/it.l/id.7/.f
