

WB-ANT - Wideband Telescopic Antenna for PSA Series Spectrum Analyzers

Features and Specification:

- Wideband Telescopic Antenna for PSA Series Spectrum Analyzers

Product Description:

This antenna is intended for general purpose applications where absolute measurements of field strength are not required.

The antenna is a high quality unit with a knuckle joint hinge in the base, terminating with an SMA connector suitable for direct connection to the PSA1302 or PSA2702.

The length is adjustable between 7.5cm and 35cm.

The useful bandwidth is specified by the manufacturer as 30MHz to 1.8GHz.

The resonant frequency as a quarter wave mono-pole is adjustable between approximately 200MHz and 1.0GHz.
