DIN Rail Terminal Blocks  
for Junction Boxes

## Variety as a Matter of Principle

▲ Sales and  
Marketing Center  
in Bamberg

▲ Company headquarters  
in Bamberg

▲ STOCKO main plant in  
Wuppertal

# wieland group

## ACTIVE WORLDWIDE

The Wieland Group employs more than 2,000 people all around the globe. With some 15 locations and subsidiaries, and sales partners in more than 70 countries, the Wieland Holding is present in nearly all important key markets worldwide.

Always with a clear commitment to the German location where most of the products are still manufactured.

### The group makes us strong

The Wieland Holding is based in Bamberg, Bavaria, and comprises two independently acting subsidiaries: Wieland Electric and STOCKO Contact.

Groundbreaking innovations made Wieland Electric one of the leading suppliers of electrical connection technology. This company, founded in Bamberg in 1910, is the largest subsidiary of the Wieland Holding.

STOCKO Contact is based in Wuppertal and joined the Wieland Group in 2001. Stocko has also more than 100 years of company history to its credit and is one of the greatest manufacturers of connector systems and crimp contacts.

## Established in industries

Control cabinet engineering, industrial automation, building system technology – our large product portfolio provides solutions for all kinds of applications.

From innovative interface and network technology to terminal blocks to "safety first" – with modular system solutions and safety components. With Wieland products in your control cabinet, you are always on the safe side.

Energy bus systems for distributed automation or indoor and outdoor field

bus components – Wieland technology can be found everywhere, and in all kinds of applications.

In building system technology, Wieland Electric is the world market leader in pluggable electrical installation.

There are good reasons why our system solutions can be found in the most spectacular building projects worldwide. When it comes to electronic networking, Wieland leads the way to the "intelligent house".

## Welcome Future

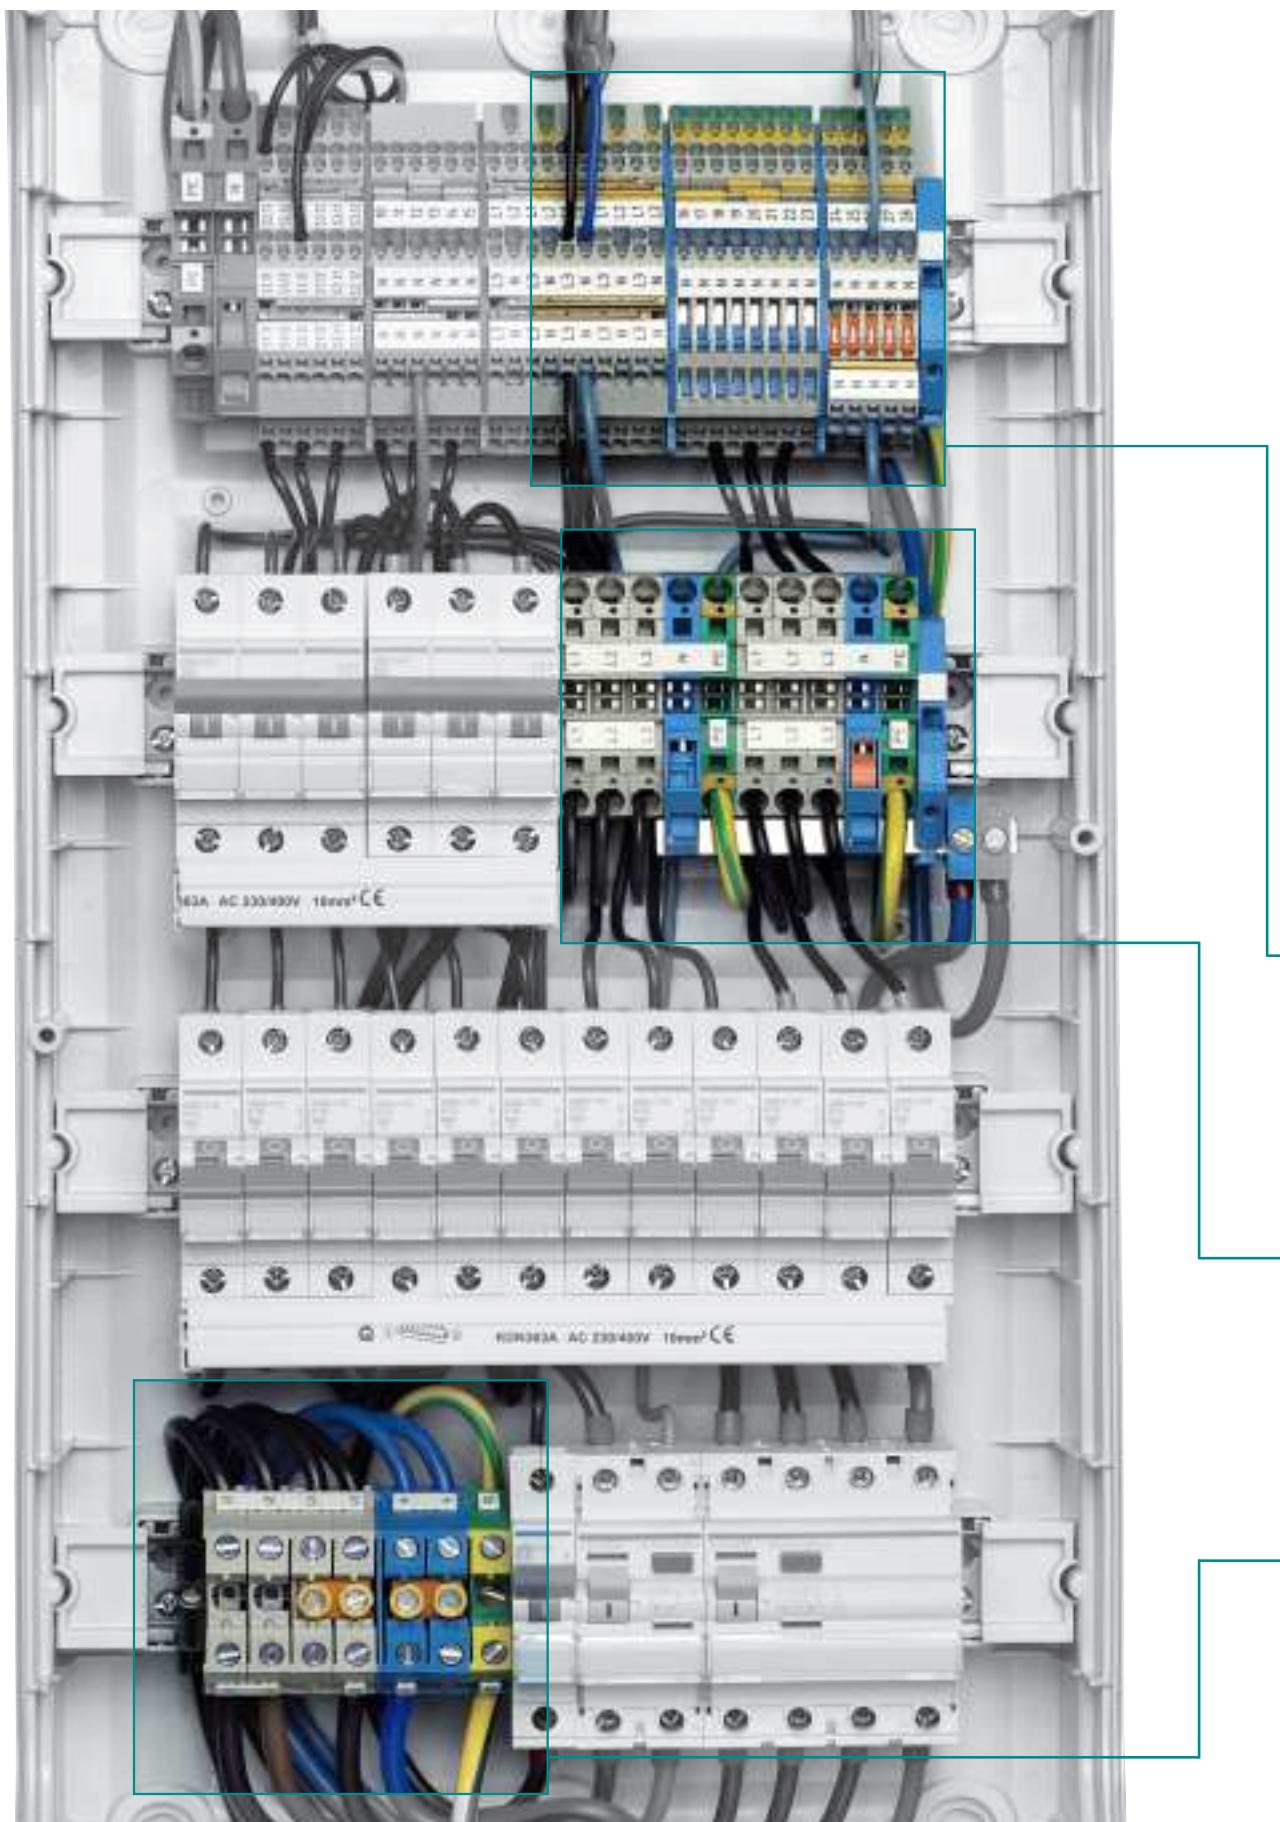

Wieland Electric is 100 years young, and full of innovative energy. And our commitment for the future is not only to find constantly new system solutions for our customers but also social responsibility.

Environmentally friendly high-tech products, manufactured to the latest production standards, an audited environmental management system and substantial investments in our locations are all part to this concept.

Global commitment and sustainable regional action – Wieland Electric is fit for the future: Contacts are green.

## DIN rail terminal blocks for junction boxes

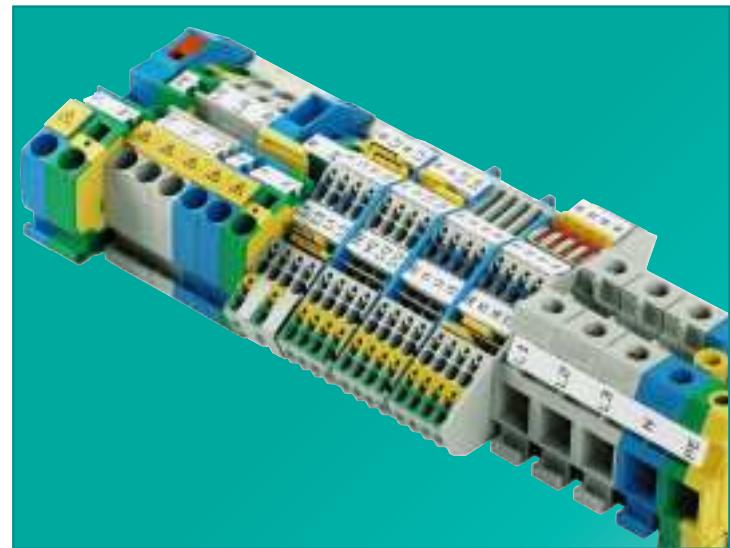

**"We at Wieland"** know what you need!

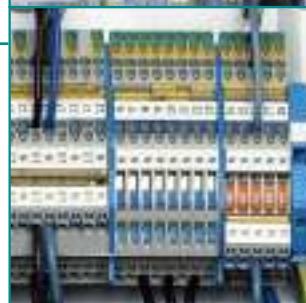

For more than 100 years we have been your competent partner in the field of connection technology for your products. Close cooperation with our customers helps to create innovative products manufactured according to the highest quality standards.

Increasing automation as well as the safety functions to be implemented inside buildings increase the requirements for power and signal management in electrical distribution systems. The growing number of circuits and the increasingly confined space available requires a DIN rail terminal block system that reduces the amount and costs of cabling but still enables clear and convenient wiring.

Wieland's DIN rail terminal blocks provide you with the right solution.

**selos/fasis**  
BIT

**fasis** BIT-S  
Type WKIS...

**selos** BIT  
Type WK/WKI...

**selos** BIT  
Type WK/WKI...

## The right solution for your application

All DIN rail terminal blocks in the BIT series comply with the directives for the setup of high-voltage and supply systems for safety services according to VDE 0108 and have been designed for use in public buildings. Isolation measurement, for example, can be carried out with the wires connected.

You have the choice. The connection technology can be implemented either in purely spring clamp or screw technology or they can be mixed together.

### DIN rail terminal blocks with push-in spring

The new installation blocks of series **fasis** BIT-S with push-in spring are an outstanding extension of the existing range.

**fasis** BIT-S helps to increase efficiency in electrical installations even more since rigid as well as flexible wires with ferrules can be directly connected without opening the termination point thus achieving considerable time savings.

### DIN rail terminal blocks with tension spring

The tension spring technology of series **fasis** BIT stands out due to its maintenance-free and vibration-proof connection technology. The TOP connection is especially suitable for confined spaces.

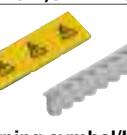

Due to its great product variety and a wire range between 0.5 mm<sup>2</sup> and 16 mm<sup>2</sup> the **fasis** BIT series enables many innovative solutions for various requirements.

### DIN rail terminal blocks with screw connection

The screw connection technology of series **selos** BIT is the best known and most used connection technology worldwide. The lateral connection option makes wiring more convenient in installations, especially on the supply side and in the case of larger cross sections.

The **selos** BIT series can be used universally; with its wire range between 0.5 mm<sup>2</sup> and 50 mm<sup>2</sup> it is very user-friendly.

# Configuration software for junction boxes, DIN rail terminal blocks

## Managing projects

### Benefits:

- To begin each configuration you automatically start from the basic project management menu.
- You create new projects and are reliably guided through the easy and practice-oriented program logics.
- You always have the choice of either opening an already existing project or of creating a new one.

## Configuring terminal block assemblies without errors

### Benefits:

- You work with high-quality graphs viewing the terminal blocks from the top; the accessories added are visible at any time.
- You continually use the plausibility check that reminds you of the accessories required such as end plates.
- You are provided with a product catalog with search function; you can add your own order numbers, if required; and you can create libraries for self-defined products.

## Entering order data

### Benefits:

- You enter your data such as invoice and delivery address in the order data screen only once and can use them for any follow-up orders.
- You may order by e-mail; in this case the terminal block assembly data are zipped automatically.

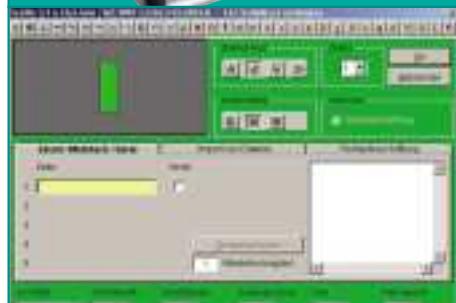

## Terminal block assembly output

### Benefits:

- You print out the order, the parts list and the drawing data, and, if required, your own order numbers.
- You create a DXF file and export the current terminal block assembly to a CAD program.
- You export the marking in CSV format including all marking data for further processing in **wiemarc**, for example.
- You can use a bidirectional interface available for your CAE system EPLAN.

## Marking system for junction boxes, DIN rail terminal blocks

Individual marking of DIN rail terminal blocks means **wiemarc** and **wieplot** at Wieland Electric. The **wiemarc** software was developed to provide you with maximum flexibility in marking your terminal block assemblies. Together with **wieplot** you have a powerful marking system that enables you to work professionally from the individual marking tag to series marking of your terminal block assemblies. You feel confident with the system due to its easy handling and visual representation of your marking, even when you use it for the first time.

But **wieplot** offers even more!

In addition to the marking tags for DIN rail terminal blocks you can also print self-adhesive tags and labels or cable markings. A slight modification can even make your plotter a powerful engraving system.

### Marking with a system – **selos** – **fasis**

- Individual marking of all terminal blocks for clear wire/termination point assignment
- One single marking system for all designs
- Marking of individual tags; marking strips in the relevant terminal block spacing; or group markings
- Individual planning of terminal block assemblies and markings with **wieplan**

### Ready for universal use – **wieplot**

- Marks all common marking systems available for DIN rail terminal blocks
- Different marking tags can be marked individually in one single work step
- Marking of labels, self-adhesive tags and cables is possible

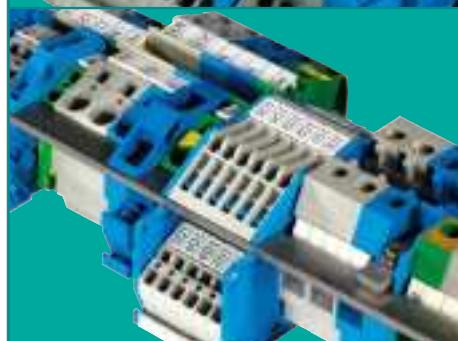

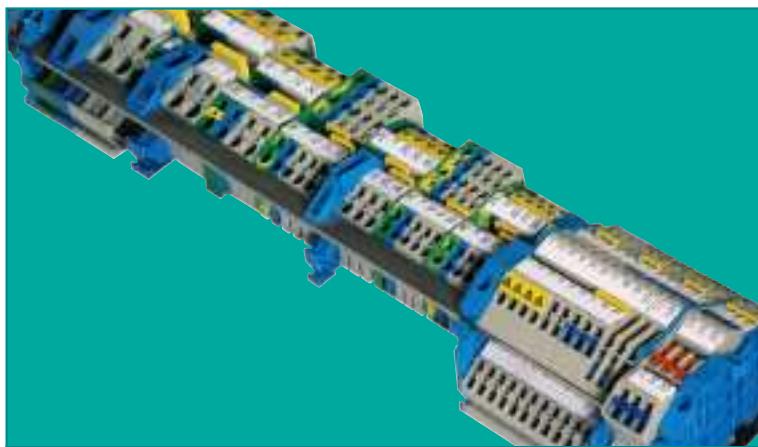

### Easy and quick – **wiemarc**

- Simple and intuitive user interface
- Direct graphical display of the marking tags including plausibility check
- Customized layouts can be created individually
- Data import from CAD, Excel, text or **wieplan** files

### Durable and safe – **wieplot** engraving system

- Easy modification to **wieplot** to make it an engraving system
- Engraving of multi-layer plastic boards
- Clean and dust-proof operation due to integrated vacuum device
- Create individual layouts using **wiemarc**

## DIN rail terminal blocks for junction boxes with tension spring connection, type WKF/WKIF

**Installation block  
WKIF 2,5...**

**Standard  
DIN rail terminal  
blocks for junction  
boxes**

**WKF 2,5 – WKF 16**

**Operation of the ter-  
minal blocks**

**Mixed  
and single-sort  
application**

The tension spring technology of series **fasis** BIT stands out due to its maintenance-free and vibration-proof connection technology. The TOP connection is especially suitable for confined spaces. The **fasis** BIT series has been designed for use in distribution systems. It accommodates the standardized dimensions for small and field distribution units with cover according to DIN 43871.

The neutral disconnect function integrated in **fasis** BIT enables the specified isolation measurement of all active conductors without having to disconnect the neutral conductor; the system can therefore be used in public and functional buildings.

### Circuit wiring with only one terminal block

- Wiring and assignment of the circuits clearly visible due to 5 mm wide, three-tier design.
- Neutral conductor connection, line feed-through and ground connection are combined in one terminal block.
- Safety and convenience due to selectable neutral disconnect
  - Disconnect unit for the neutral busbar, version ...NT-D-SL
  - Internal disconnect of the neutral potential, version ...NTM-D-SL

### Power supply and distribution

- Incoming supply, power distribution in sub-systems and routing to other sub-systems.
- Ground contact to the mounting rail is made immediately after snap-on of the ground block.
- PEN function with 2 pole cross connector and ground connection through neutral feed-through block.
- Safe disconnect of the neutral potential from the neutral busbar due to selectable neutral disconnect unit.

### Convenient switching and operation

- Convenient operation due to screwless spring connection technology without screws in inclined design. Wire entry and terminal operation are performed in parallel on one tier.
- Permanently secure and dynamic connection due to the spring connection technology with tension spring system and separation of electrical and mechanical functions.
- Safety and user-friendly operation even when the neutral conductor is disconnected from the neutral busbar by means of a disconnect unit to perform an insulation test with visual control.

### Combinations within the system

- A combination of the installation blocks with standard DIN rail terminal blocks and different connection styles.
- Example:
  - Incoming supply and circuit wiring with the screwless spring connection of **fasis** BIT throughout.
  - Incoming supply with the proven **selos** BIT screw connection style and circuit wiring with the compact **fasis** BIT installation blocks.

### Accumulating and isolating the neutral potential

- Combining the neutral conductors of the individual circuits through the neutral busbar up to a current load of 140 A.
- Connection of the busbar's neutral potential to the ground-fault circuit interrupter or supply for the distribution unit with connector clamp WAK in 16 or 35 mm<sup>2</sup>.
- Safe and stable 3D positioning of the neutral busbar through busbar support with end clamping function.

### Jumpering the terminal blocks

- Touchproof jumpering with insulated cross connector.
- High resistance of the cross connectors to the "rated current" of the rated cross section.
- High resistance to mechanical wear.
  - Due to a separation of the mechanical and electrical functions
  - Protection against excessive bending of the contact spring due to its structural design

### Marking live potentials

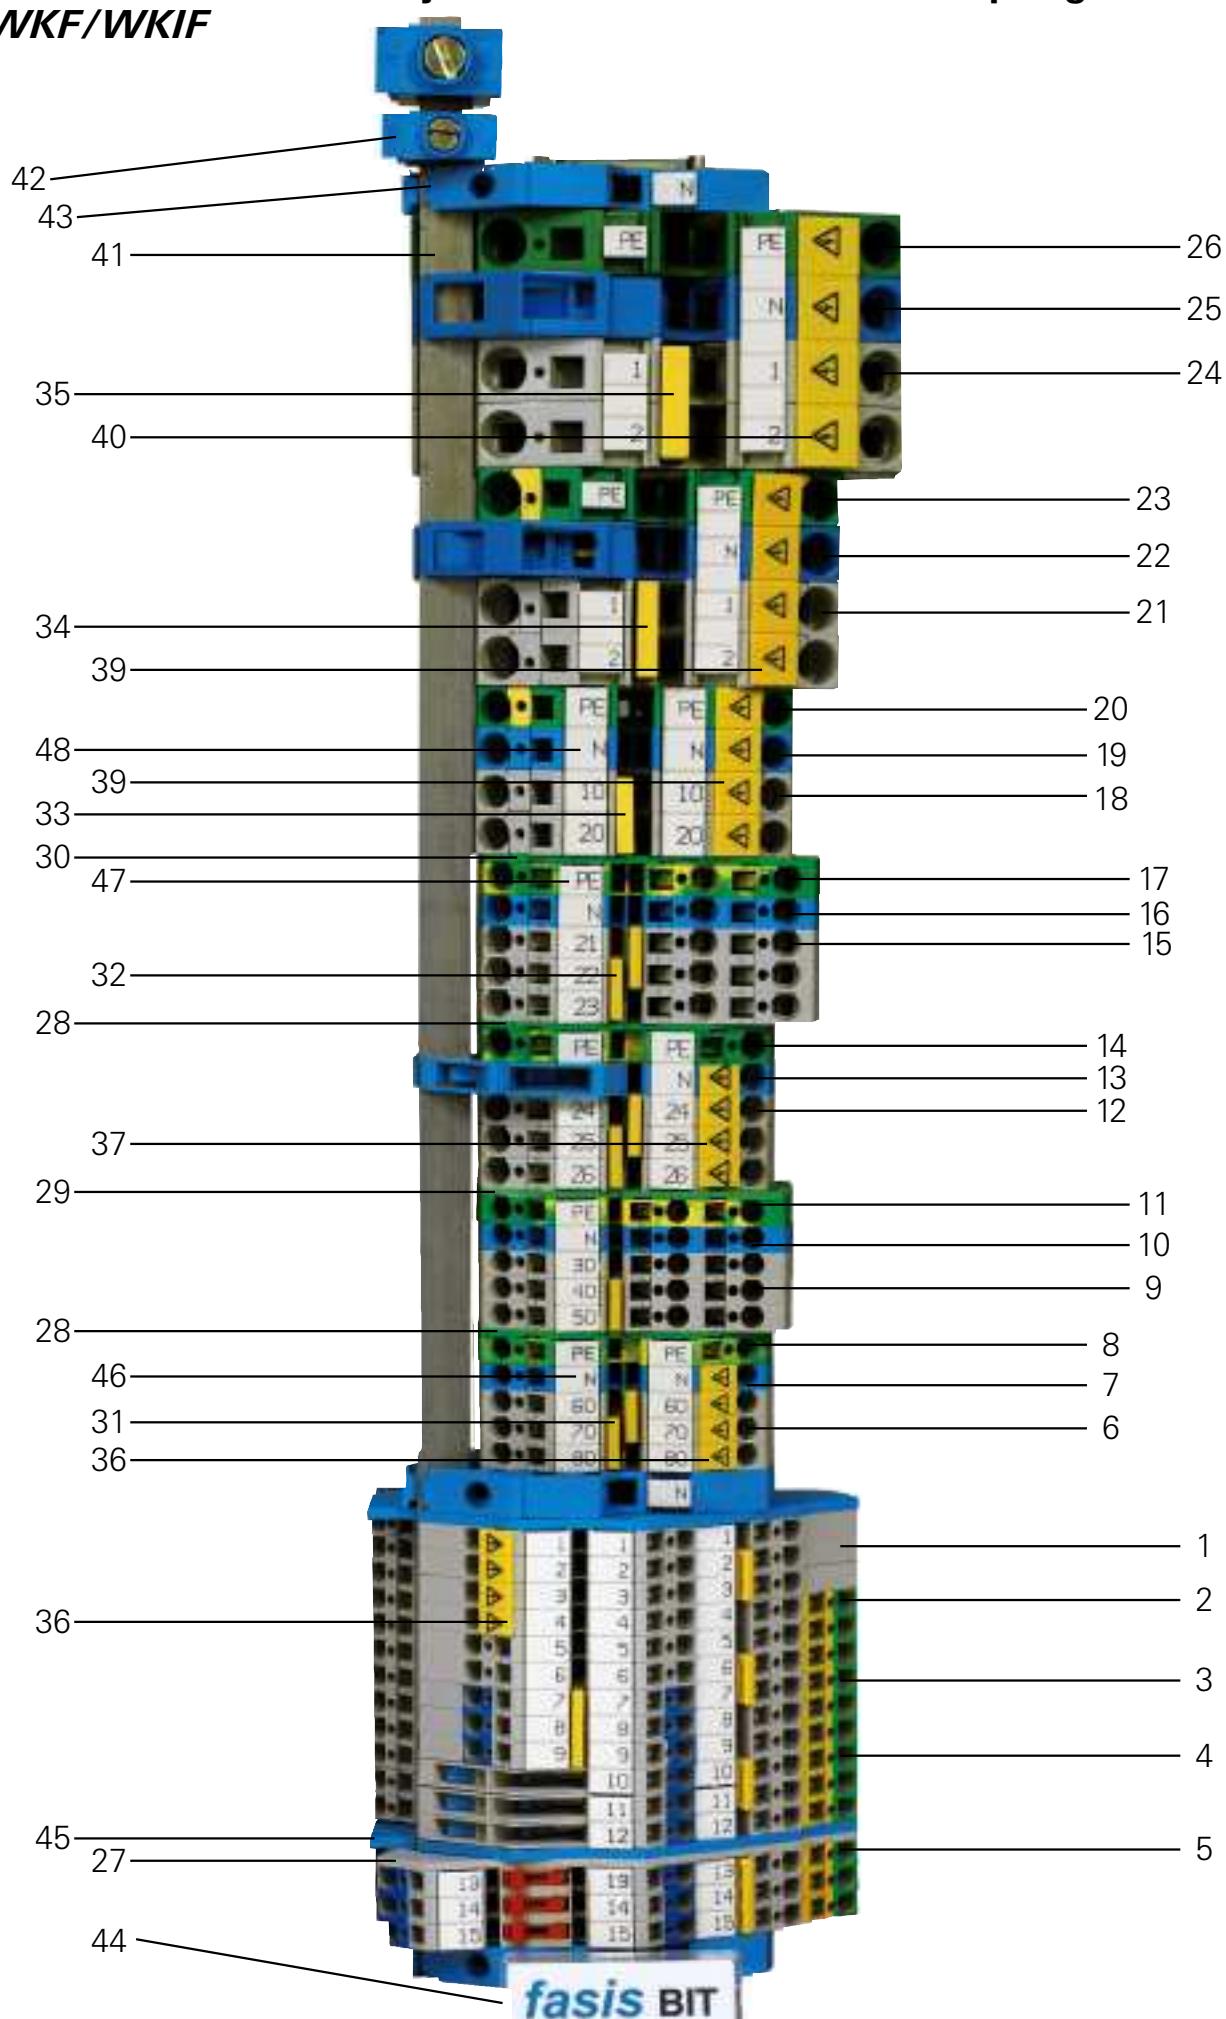

- Marking of live components for greater safety.
- For terminal blocks that remain live when the main switch is disconnected (DIN VDE 0113).
- The snap-on cover can only be removed with a tool.

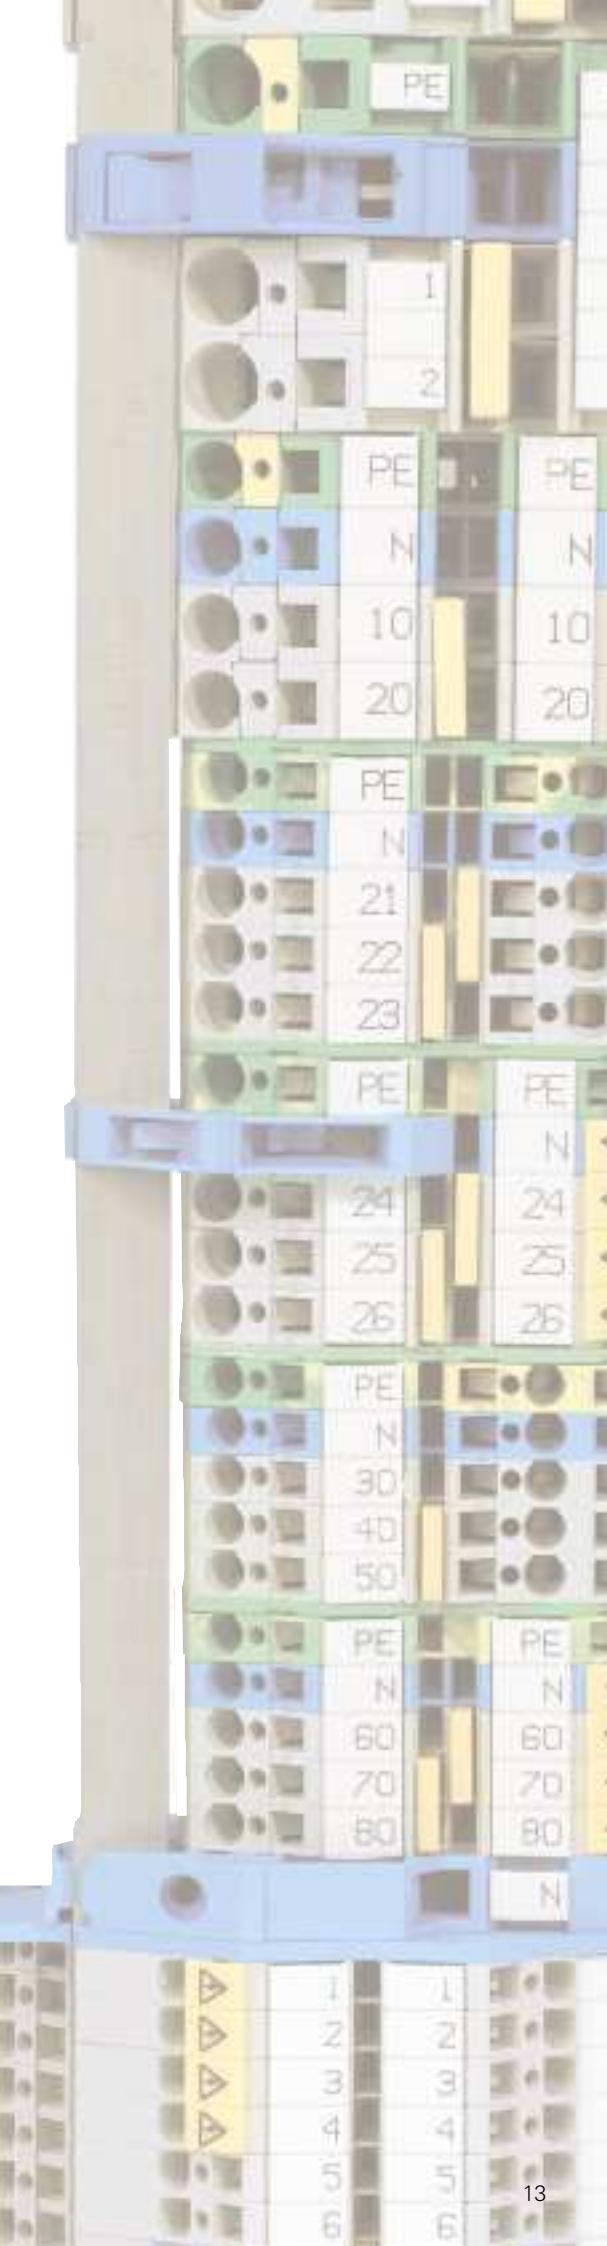

### Clearly marking all clamping points

- Marking tags easily readable even with the wires connected.
- Clear assignment of wire to clamping point during wiring.
- Simplified troubleshooting for servicing.
- Individual marking with the **wiemarc** and **wieplot** marking systems.

### Selection of high-quality materials

- Special alloys enable low contact resistance and provide a gas-tight contact area:
  - Clamping spring: stainless CrNi steel
  - Busbar: tin-plated copper
- Polyamide has excellent electrical, chemical and mechanical characteristics:
  - Temperature resistance: up to 120 °C
  - Creepage resistance: CTI 600
  - Flammability class: self-extinguishing, UL94-V0

## DIN rail terminal blocks for junction boxes with push-in spring connection, type WKIS

**Operating the installation block**

**Installation block WKIS 2,5...**

**Standard DIN rail terminal blocks for junction boxes**  
**WKF 2,5 – WKF 16**  
**WKF 2,5 – WKI 35**

The new installation blocks of the **fasis** BIT-S series with push-in spring extend the existing range and add value for the customer.

With **fasis** BIT-S the electrical installation can be made even more efficient. Rigid and flexible wires with ferrules can be connected directly without opening the termination point which can save much time.

The **fasis** BIT-S series has been designed for use in distribution systems. It accommodates the standardized dimensions for small and field distribution units with cover according to DIN 43871.

The neutral disconnect function integrated in **fasis** BIT-S enables the specified isolation measurement of all active conductors without having to disconnect the neutral conductor; the system can therefore be used in public and functional buildings.

### **Efficient connection and user-friendly circuit operation**

- Time savings and user-friendly operation with direct connection of rigid wires up to 4 mm<sup>2</sup> and flexible wires with ferrules up to 2.5 mm<sup>2</sup> without using any tools.
- Durably safe and dynamic connection due to the spring clamp connection with direct connection technology and isolation of the electrical and mechanical functions.
- Safety and user-friendliness even when disconnecting the neutral conductor from the busbar using a disconnect slide with position indicator.

### **Circuit wiring with only one terminal block**

- Clear wiring and assignment of the circuits due to 5 mm wide, three-tier design.
- Neutral conductor connection, line feed-through and ground connection are combined in one terminal block.
- Safe and user-friendly due to switchable neutral disconnect
  - Disconnect unit for the neutral busbar, version ...NT-D-SL
  - Internal disconnect of the neutral potential, version...NTM-D-SL

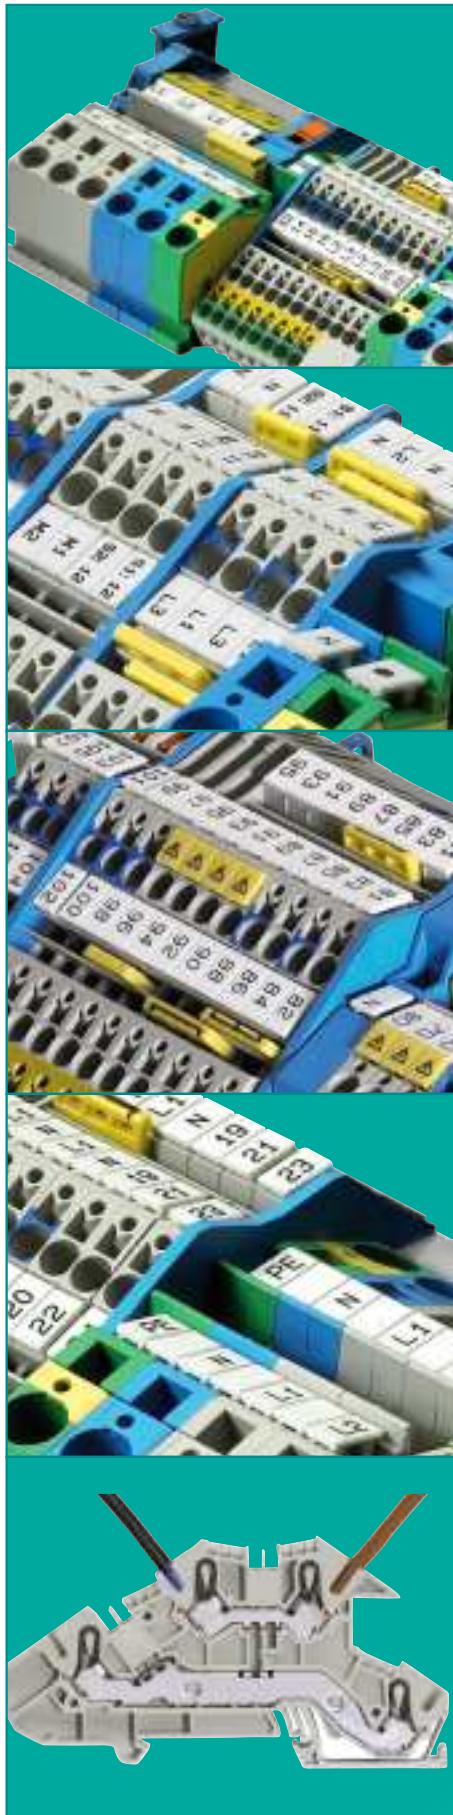

### **Power supply and distribution**

Standard DIN rail terminal blocks for junction boxes are available for supply, distribution and routing of power to the sub-distribution units.

- **fasis** BIT, DIN rail terminal blocks with tension spring up to 16 mm<sup>2</sup>
- **selos** BIT, DIN rail terminal blocks with screw connection up to 50 mm<sup>2</sup>

The ability to combine the installation blocks **fasis** BIT-S with standard DIN rail terminal blocks makes your applications flexible.

- Completely equipped with spring clamp technology
  - Circuit wiring using the efficient and compact **fasis** BIT-S installation blocks with direct connection technology
  - Supply and potential distribution in the likewise vibration-proof **fasis** BIT tension spring technology.
- Equipped with a combination of spring clamp and screw technology
  - Circuit wiring using the efficient and compact **fasis** BIT-S installation blocks with direct connection technology.
  - Supply and potential distribution using the universal and proven **selos** BIT screw technology.

### Accumulating and isolating the neutral potential

- Combining the neutral conductors of the individual circuits through the neutral busbar up to a current load of 140 A.
- Connection of the busbar's neutral potential to the ground-fault circuit interrupter or supply for the distribution unit with connector clamp WAK in 16 or 35 mm<sup>2</sup>.
- Safe and stable 3D positioning of the neutral busbar through busbar support with end clamping function.

### Jumpering the terminal blocks

- Touchproof jumpering with insulated cross connector.
- Flexible potential distribution with double jumpering channel and releasable links.
- High resistance of the cross connectors to the "rated current" of the rated cross section.
- High resistance to mechanical wear.
  - Due to a separation of the mechanical and electrical functions
  - Protection against excessive bending of the contact spring due to its structural design

### Marking live potentials

- Marking of live components for greater safety.
- For terminal blocks that remain live when the main switch is disconnected (DIN VDE 0113).
- The snap-on cover can only be removed with a tool.

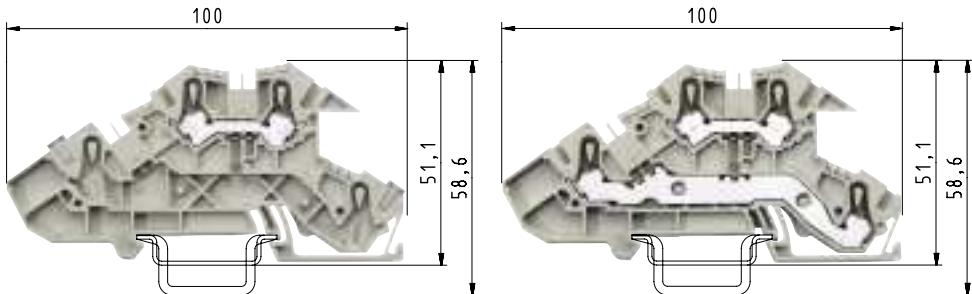

### Clearly marking all clamping points

- Marking tags easily readable even with the wires connected.
- Clear assignment of wire to clamping point during wiring.
- Simplified troubleshooting for servicing.
- Individual marking with the **wiemarc** and **wieplot** marking systems.

### Selection of high-quality materials

- Special alloys enable low contact resistance and provide a gas-tight contact area:
  - Clamping spring: stainless CrNi steel
  - Busbar: tin-plated copper
- Polyamide has excellent electrical, chemical and mechanical characteristics:
  - Temperature resistance: up to 120 °C
  - Creepage resistance: CTI 600
  - Flammability class: self-extinguishing, UL94-V0

## Multi-tier terminal blocks for junction boxes with push-in spring connection, type WKIS

The screw connection technology of series **selos** BIT is the best known and most widely used connection technology worldwide. The lateral connection technology is user-friendly both for supplying larger cross sections and for wiring the circuits. Thus, two conductors can be wired in one termination point, for example.

The **selos** BIT series has been designed for use in distribution systems. It accommodates the standardized dimensions for small and field distribution units with cover according to DIN 43871.

The neutral disconnect function integrated in **selos** BIT enables the specified isolation measurement of all active conductors without having to disconnect the neutral conductor; the system can therefore be used in public and functional buildings.

### Circuit wiring with only one terminal block

- Clear wiring and assignment of the circuits due to 6 mm<sup>2</sup> wide, three-tier design.
- Neutral conductor connection, line feed-through and ground connection are combined in one terminal block.
- Safe and user-friendly due to switchable neutral disconnect
  - Disconnect slide for the neutral busbar, version ...NT-D-SL
  - Internal disconnect of the neutral potential, version ...NTN-D-SL

### Power supply and distribution

- Incoming supply, power distribution in sub-systems and routing to other sub-systems.
- Tightening the clamping screw causes contact of the ground conductor to the mounting rail.
- PEN function is achieved using PEN blocks with the same contour.
- Safe disconnect of the neutral potential from the neutral busbar due to switchable neutral disconnect slide.

### Convenient switching and operation

- Operating safety thanks to worldwide proven screw connection. The funneled wire entries allow easy connection from the side even in crowded spaces.
- Gas-tight and dynamic connection thanks to screw connection technology in rising cage clamp system with one-piece threaded collar.
- User-friendly operation, even when the neutral conductor is disconnected from the neutral busbar, via disconnect unit.

### Combinations within the system

- A combination of the installation blocks with standard DIN rail terminal blocks and different connection styles.
- Example:
  - Consistent supply and circuit wiring with the proven **selos** BIT screw connection technology
  - Supply with **selos** BIT screw connection technology and circuit wiring with the compact installation blocks, for example with the **fasis** BIT-s direct connection technology.

**Busbar****Cross connectors****Cover****Partition plates****Material**

### **Accumulating and isolating the neutral potential**

- Combining the neutral conductors of the individual circuits through the neutral busbar up to a current load of 140 A.
- Connection of the busbar's neutral potential to the ground-fault circuit interrupter or supply for the distribution unit with connector clamp WAK in 16 or 35 mm<sup>2</sup>.
- Safe and stable 3D positioning of the neutral busbar through busbar support with end clamping function.

### **Jumpering the terminal blocks**

- Choice between insulated and uninsulated cross connectors.
- Touch-proof insulated cross connectors according to IP 20 without additional actions.
- Uninsulated cross connectors require covers to make them touch-proof.
- Jumper bars as additional jumpering option are inserted into the clamping body together with the conductor.

### **Marking live potentials**

- Marking of live components for greater safety.
- For terminal blocks that remain live when the main switch is disconnected (DIN VDE 0113).
- The snap-on cover can only be removed with a tool.

### **Potential isolation**

- Rated voltage can be applied to adjacent uninsulated cross connectors.
- Can be mounted later on without loss due to separation
- The snap-on partition plate can only be removed with a tool.

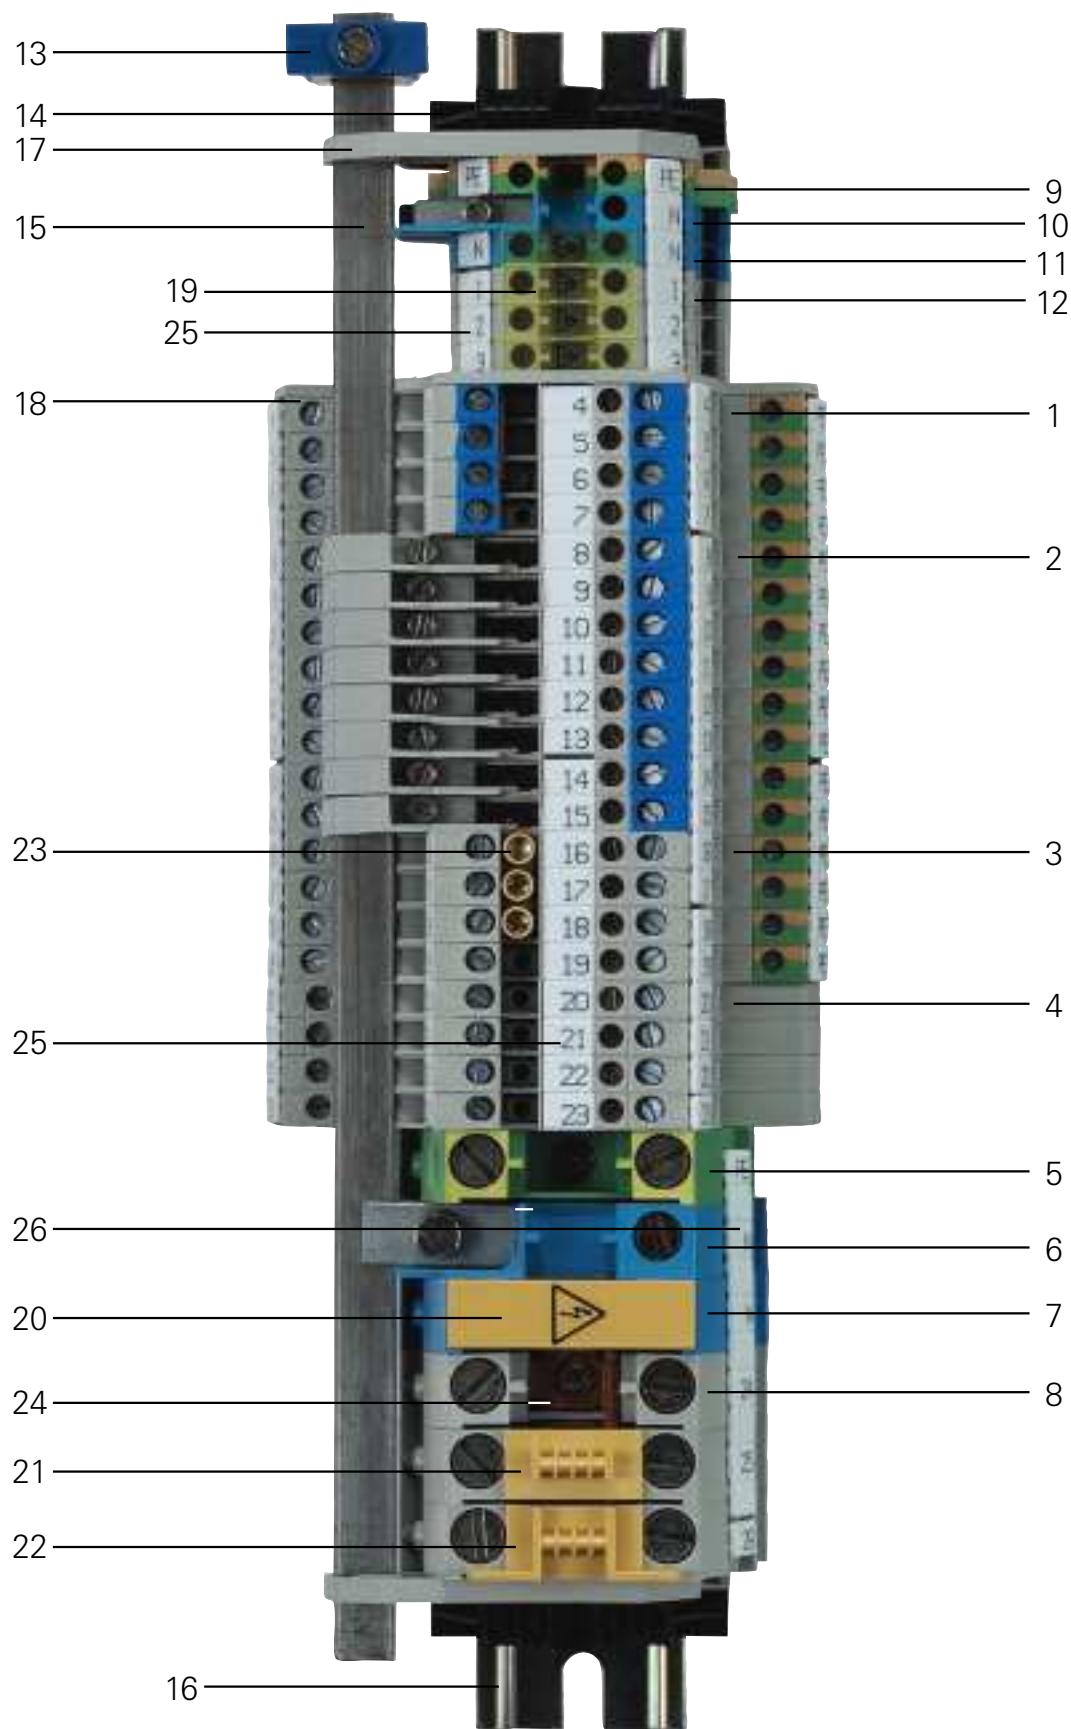

### **Clearly mark all clamping points**

- Marking tags easily readable even with the wires connected.
- Clear assignment of wire to termination point on wiring.
- Simplified troubleshooting for maintenance.
- Individual marking with the **wiemarc** and **wieplot** marking system.

### **Selection of high-quality materials**

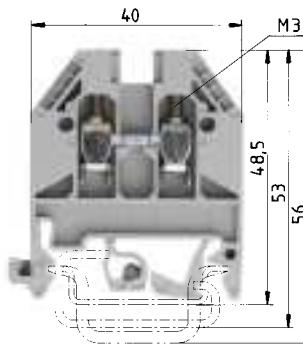

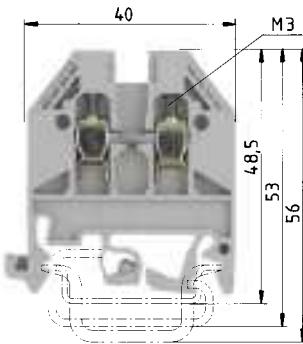

- Special alloys enable low contact resistance and provide a gas-tight contact area:
  - Clamping spring: steel, zinc-plated and dichromated
  - Busbar: tin-plated copper
- Polyamide has excellent electrical, chemical and mechanical characteristics:
  - Temperature resistance: up to 120 °C
  - Creepage resistance: CTI 600
  - Flammability class: self-extinguishing, UL94-V0

### PEN assembly block for junction box IEC 947-7-2 EN 60947-7-2

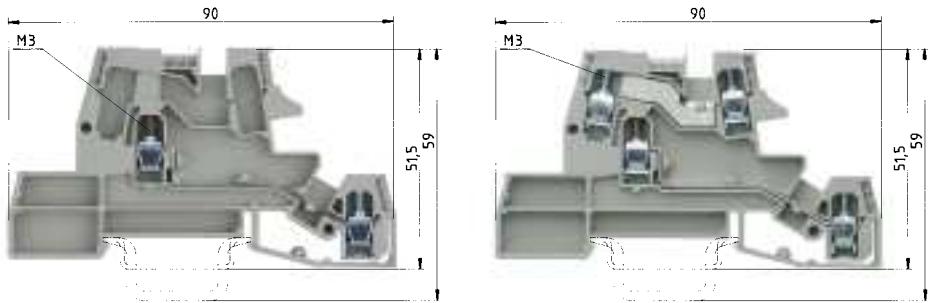

Electrical power is often supplied to the plant in a 4 conductor three phase system (L1, L2, L3, and Ground). However, the electrical equipment in the plant may require a 5 conductor three phase system (L1, L2, L3, N, and Ground). Therefore, it is important to have a connection system to accommodate both possibilities.

The Wieland **WKI...PEN/35** system accomplishes this task. The PEN assembly terminal block consists of a ground terminal which is grounded to the DIN rail and a neutral terminal (color coded blue) which is electrically isolated from the DIN rail. The two terminals are commoned via a cross connector (jumper bar) thereby, tying the neutral terminal to ground.

When using the PEN assembly terminal block system, the DIN mounting rail only acts as a grounding bus. Therefore, copper mounting rail is not required and standard zinc plated steel DIN can be used for grounding purposes.

These assemblies have the same symmetry as the corresponding feed-through terminals of the WKI series and fit the height required for junction boxes per DIN 43871 when using DIN rail size 35 x 27 x 7.5.

## Multi-tier terminal blocks for junction boxes with screw connection, type WKI 4...

## Multi-tier terminal blocks for junction boxes with screw connection, type WKI 4...

Nominal current according to VDE 0820 T2/EN 60 127-2 when using 1.6 W

- 6.3 A for single blocks

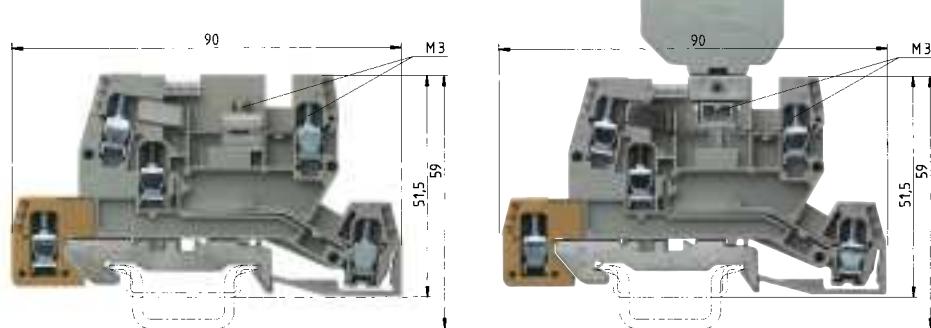

- 4 A for blocks mounted directly adjacent to each other

Voltage and current are determined by the LED and the fuse in the end application.

\*! For the current carrying capability of the mounting rail see **facts & DATA**

### Busbar application:

Position these terminals at the beginning or end of the assembly when incorporating the busbar system.

NTN – disconnect block  
D – line feed-through block  
SL – ground

TKG – fuse plug

<b>Description:</b>			<b>Description:</b>			<b>Description</b>		
<b>wieplan</b> is a software used to configure, document and order DIN rail terminal block assemblies. The intuitive user interface makes working with <b>wieplan</b> as easy as child's play.			<b>wieland marcom 2</b> is a freely programmable marking computer for DIN rail terminal blocks, pluggable connectors, switching devices and cables. The computer provides of a large number of fonts, with numerical and alphanumerical characters and symbols.			<b>wiemarc</b> is a Windows® based plotter software for customized marking using the <b>wieplot</b> 500 plotter system.		
<b>wieplan</b> enables data exchange through CAE systems: – EPLAN 5 – EPLAN Electric P8			<b>marcom 2</b> is portable and can be used at any location; it can be operated either using the mains or batteries.			Both the Wieland standard marking system and marking tags and labels of other suppliers can be marked easily. The <b>wiemarc</b> software version 4.0 provides the option of connecting to the <b>wieplot</b> 500 E-UNIT engraving system.

## Marking accessories

### DIN rail terminal blocks for junction boxes

Material:  
Polyamide 6.6  
black figures on white background

DIN rail terminal blocks, type WKF, can accept marking tags on both sides on top of the block in a 3-chamber slot. It can be either 3 single number tags from the tear-off marking strip, or single tags, or marking strips.

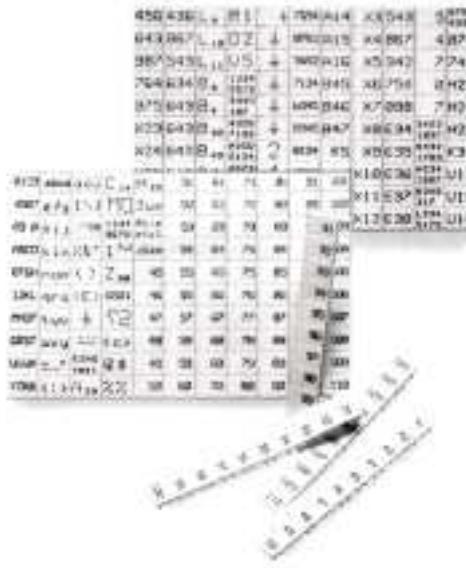

- Marking strips** marked and unmarked made from Polyamide 6.6, suitable for 10 terminal blocks.  
Marking 1-10, 11-20 etc. up to 991-999.  
Type 9705 A/5/10 (5 mm spacing) for DIN rail terminal blocks type WK/WKIF/WKIS 2,5...  
Type 9705 A/6/10 (6 mm spacing) for DIN rail terminal blocks type WK/WKI/WKF 4...  
Type 9705 A/5/10/5 B (10 mm spacing) for DIN rail terminal blocks type WKI/WKF 10...  
Type 9705 A/6/10/5 B (12 mm spacing) for DIN rail terminal blocks type WKI/WKF 16...  
Type 9705 A/8/10/5 B (16 mm spacing) for DIN rail terminal blocks type WKI 35...

- Tear-off marking strips** with 10 marking tags made from Polyamide 6.6, white, marked and unmarked.

This marking system considerably reduces the time required for marking terminal block assemblies. For numerical of terminal block rows only 11 stock positions are required. As the time used for picking and attaching the tags is reduced, and as stockkeeping is low and the prices extremely favorable, attractive cost savings are the result from using these tear-off marking strips.

Type 9704 A...

- Single marking tag** made from Polyamide 6.6, white, marked and unmarked.  
Type 9705 A...

**Marking plates**  
for the **marcom** 2 marking computer  
for the **wieplot** 500 plotter system

**All terminal blocks / 5 mm wide and larger**

## Industrial technology

### Solutions for the control cabinet

- DIN rail terminal blocks
  - Screw, tension spring or push-in connection technology
  - Wire cross sections up to 240 mm<sup>2</sup>
  - Numerous special functions
  - Software solutions interfacing to CAE systems
- Safety
  - Safe signal acquisition
  - Safety switching devices
  - Modular safety modules
  - Compact safety controllers
  - Applicative consultancy and training
- Network engineering and fieldbus systems
  - Remote maintenance via VPN industrial router and VPN service portal
  - Industrial Ethernet switches
  - PLC and I/O systems, standard and increased environmental conditions
- Interface
  - Power supply units
  - Overvoltage protection
  - Coupling relays, semiconductor switches
  - Timer relays, measuring and monitoring relays
  - Analog coupling and converter modules
  - Passive interfaces

### Solutions for field applications

- Decentralized installation and automation technology
  - Electrical installation for wind tower
  - Fieldbus interfaces and motor starters
- Connectors for industrial applications
  - Rectangular and round connectors
  - Aluminum or plastic housings
  - Degree of protection up to IP68
  - Current-carrying capacity up to 100A
  - Connectors for hazardous areas
  - Modular, application-specific technology

### PC board terminals and connectors

- Screw or spring clamp connection technology
- Spacings: 3.5 mm to 10.16 mm
- Reflow or wave soldering process

## Building and installation technology

- Building installation systems
  - Main power supply connectors IP 20/IP 65 ... IP 68
  - Bus connectors
  - Low-voltage connectors
  - Power distribution system with flat cables
  - Distribution systems
  - Bus systems in KNX, LON and radio technology
  - DIN rail terminal blocks for electrical installations
  - Overvoltage protection
