**Deutsch HD30 Series**

A heavy duty, environmentally sealed, multi-pin circular connector, featuring quick connect-disconnect bayonet coupling, single hole bulkhead mounting, silicone seals, with a rear insertion/rear removal contact system.

The Deutsch HD30 Series connector, was developed to meet the needs of the heavy duty equipment and transportation industries for rugged, multi-pin, sealed connector systems.

**Deutsch HDP20 Series**

Designed specifically for the truck, bus and off-highway industry, the HDP20 Series is a heavy duty rated, environmentally sealed, composite shell, multi-pin connector. The plug features a quick connect-disconnect bayonet style coupling and the receptacle is designed for single hole mounting. Thus reducing assembly line time and installation costs.
The HD/HDP Series

Decreases Costs and UP-Grades Performance

The Deutsch HD/HDP Series was developed to provide a solution to today's system problems found in the heavy duty trucking, equipment and transportation industries. The HD/HDP is a cylindrical, multi-pin, sealed device utilizing crimp type contacts that are quickly and easily inserted or removed. Use of the HD/HDP Series eliminates several other common connector problems.

Problems associated with assembly and network time, operational breakdowns requiring costly repairs and lengthy out of service time in the field have all been reduced and/or eliminated by the judicious application of the HD/HDP Series.

Deutsch HD/HDP Series provide the widest selection of interconnections for critical circuits requiring heavy-duty environmental terminations. Together, the HD and HDP offer common layouts, common tooling, the same adaptability to backshells and both meet the performance standards for heavy duty applications. So whether you are looking for rugged HD metal shells or cost effective HDP plastic shells, Deutsch offers the best product for your applications while holding the line on hidden inventory and assembly costs.

Some of the benefits of the Deutsch HD/HDP Series include:

• Quick, fool-proof assembly, decreasing time on the assembly line and eliminating miswiring.
• Simple and easy to rework, decreasing down time and increasing profits to the operator.
• Sealed against moisture and contaminants, eliminating open wiring system.
• Operation under severe shock and vibration, reducing breakdown and out of commission loss due to rugged operating conditions.
• Performance over a wide temperature range (-55°C to +125°C) meaning continuous operation in all environments, from arctic to desert conditions.
• Human factors engineered to assure that assembly and rework can be reliably handled by unskilled personnel.
Sealed Against Moisture and Contaminants

Unlike terminal strips, binding posts and other open-wiring systems, the Deutsch HD/HDP Series is a completely sealed unit. The rear of the connector features an integral grommet wire seal that automatically seals each contact as it is locked into place during installation. There is no extra hardware to fasten or tighten or potting operation to achieve this seal.

Fabricated from tear resistant, high temperature silicone, this rear grommet protects the contact from moisture, sand, dust, lubricating oils, road salt, hydraulic fluid, grease, mud and other contaminants encountered in heavy duty use. The elimination of open-wiring systems does away with such common hazards as short circuits due to metallic objects across the terminals. This is especially important during loading or refueling operation when a spark could cause a serious explosion. Closed wiring also protects maintenance personnel against accidental shock, yet can be easily checked for circuit continuity.

Contact Retention Decreases Installation Costs and Increases Reliability

The HD/HDP Series uses crimp type, solid copper alloy contacts for damage proof performance and stamped & formed copper alloy contacts for cost effectiveness. Each style has the ability to carry continuous high operating current loads without overheating. The contacts or terminals are crimp terminated using automatic tooling for production and inexpensive readily available hand tools for field maintenance. After crimping, these contacts are easily installed by simply pushing the contact into place by hand. Contacts are positively secured by use of “fingers” in the connector which lock behind the shoulder of the contact, preventing accidental dislodging. Although securely locked in place, these contacts can be quickly and easily removed by the use of an inexpensive, non-conductive removal tool.

Corrosion Proof Plastic Shell HDP20 Series Provide a Cost Effective Alternative

Deutsch plastic shell HDP20 Series provide cost effectiveness with heavy duty terminations for the truck, bus & off-highway industries. Other features include: silicone wire and interfacial seals, visual indication of lock and mated position. Corrosion proof plastic shells and use of low cost stamped and formed contacts provides a cost effective solution for your application.

The HDP20 uses a bayonet coupling system to provide a vibration resistant locking mechanism. This shell provides a multiple keying system that positively prevents mismating and makes plug and receptacle coupling quick and easy. Receptacles mount with a single hole using a “flat” to prevent the connector from rotating.

Rugged Metal Shell HD30 Series Withstands Years of Abuse

Deutsch HD30 Series features a lightweight, yet compact and rugged metal shell to protect contacts and sealing grommets. This shell provides a multiple keying system that positively prevents mismating and makes plug and receptacle coupling quick and easy.

The HD30 Series uses a bayonet coupling system that provides a positive vibration resistant locking mechanism with visual indication of proper mate and lock. This quick disconnect system requires only a quarter turn to operate.

Easy installation to structure is provided by a single one-hole mounting system using a “flat” to prevent the connector from rotating during assembly or service.
HD/HDP Series Connector Features

Deutsch HD/HDP Series environmental connectors offer the advantages of decreased costs and upgraded performance. Designed to withstand years of abuse, the Deutsch HD/HDP Series is setting the pace in the Heavy Equipment Industry. Key features common to the HD/HDP Series are itemized below.

I. Contacts
   A. Solid copper alloy construction withstands continuous current overload without degradation.
      Cost effective stamped and formed contacts provide high reliability and low cost.
   B. Range of contact and acceptable wire sizes
      1. Size #4 AWG 6 (13.0 mm$^2$)
      2. Size #8 AWG 8 & 10 (8.0 – 5.0 mm$^2$)
      3. Size #12 AWG 12 & 14 (4.0 – 2.0 mm$^2$)
      4. Size #16 AWG 14 & 20 (0.5 – 2.0 mm$^2$)
      5. Size #20 AWG 16 & 22 (0.5 – 1.5 mm$^2$)
   C. Closed entry socket contact design assures positive conductivity and eliminates probe damage.
   D. Simplified pin contact design limits possibility of bending.

II Inserts
   A. The hard plastic insert and closed contact interface captivate the contacts to prevent “float” and “splay”.
   B. Positive contact retention is provided through the use of plastic locking fingers which snap closed behind the shoulder of the contact.
   C. Interfaces
      1. Lead-ins on socket interface properly align bent pins.
      2. Hard plastic prevents pins from penetrating dielectric material.
   D. Available in several insert arrangements*.
      1. Five in shell size 18 (HD30 or HDP20).
      2. Fourteen in shell size 24 (HD30 or HDP20).
   *See Page 9
   E. Redundant wire seals prevent contamination from entering from rear of connector.
   F. Sealing plug to fill unused cavities to keep environmental sealing characteristics intact.

III. Shell
   A. Rugged, all metal shell to withstand years of abuse (HD30) Corrosion resistant all plastic shell (HDP20) has same features (item C).
   B. Positive shell keying prevents mismating.
   C. Simple, one quarter turn coupling.
      1. Free rotating, captivated coupling ring for fast assembly.
      2. Coupling ring designed to insure proper environmental sealing with minimum mating forces.
      3. Audio and visual indications of positive locked condition.
   D. Available in a straight plug and single hole mounting receptacle for easy installation to structure.

IV. Application Tooling
   A. Standard crimp tool or semi-automated, high-speed crimping tool is available.
      1. Fast, reliable, uniform results.
      2. Simplified procedures mean that only average skill is required for assembly.
      3. No soldering heat means:
         a. No chance of heat damage to parts.
         b. No wicking to contribute to vibration failure.
   B. Inexpensive plastic removal tool designed to eliminate hidden internal insert damage.
      1. Removal tool designed to break rather than injure connector.
      2. Dielectric tool construction prevents shocks to personnel.
Material Specifications

HD30 Plug
Shell: Aluminum
Coupling Ring: Aluminum
Insert Retainer: Thermoplastic
Grommet - Silicone rubber

HD30 Receptacle
Shell: Aluminum
Insert Retainer: Thermoplastic
Grommet - Silicone rubber

HD20 Plug
Shell: Thermoplastic
Coupling Ring: Thermoplastic
Insert Retainer: Thermoplastic
Grommet - Silicone rubber

HD20 Receptacle

Insert Retainer: Thermoplastic
Grommet - Silicone rubber

HD/HDP Mounting Hardware
Panel Nut: Aluminum, Plastic
Lockwasher: Spring Steel - Tin over Nickle

Solid Contacts
Pin: Copper Alloy
Socket: Copper Alloy
Finish: Nickel plating
Optional: Gold plating is available for dry circuit applications

Stamped & Formed Contact
Pin: Copper Alloy
Socket: Copper Alloy
Finish: Nickel plating
Optional: Gold plating is available for dry circuit applications

Sealing Plugs
Thermoplastic: Size 20 thru 8
Elastomer: Size 4

Performance Specifications

Temperature
Operating at temperatures from -55°C to + 125°C.
Continuous at rated current

Durability
No electrical or mechanical defects after 100 cycles of engagement or disengagement.

Physical Shock
No unlocking unmating or other unsatisfactory result during or after 50 g's in each of three mutually perpendicular planes.
No electrical discontinuities longer than 1 microsecond. MIL-STD 202, Method 213, Condition “C”.

Contact Current Rating @ 125°C (continuous)
Contact Size | Max. Current
---|---
#20 | 7.5 amps
#16 | 13 amps
#12 | 25 amps
#8 | 60 amps
#4 | 100 amps

Insulation Resistance
1000 megohms min. at 25°C.

Vibration
Maintains continuity and exhibits no mechanical or physical damage during or while subject to a sinusoidal vibration, having an amplitude of .060 inches double amplitude and the frequency varied linearly between limits of 10 to 2000 to 10 Hz with a maximum force of 20g's. No electrical discontinuities longer than 1 microsecond.

Moisture Resistance
Water does not penetrate seals when submerged in 3 feet of water.

Corrosion Resistance
Connectors show no evidence of corrosion after exposure to 48 hours of salt spray per MIL-STD 1344 method 1001.

Fluid Resistance
Connectors show no damage when exposed to most fluids used in industrial applications.

Dielectric Withstanding Voltage:
Current leakage less than 2 milliamps at 1500 VAC.

Crimp Tensile Strength: (Solid & Stamped)

Receptacle Mounting

To mate the plug and the receptacle, line up the index groove on the plug with the flat surface on the receptacle, turn 1/4 turn clockwise. You will feel and hear the pieces snap into the locked position. To unmate the plug and receptacle, reverse the above procedure.

**Mating / Unmating Instructions**

**CAUTION:** When mating or unmating plug and receptacle, disassemble by hand. DO NOT use pliers or any other tool.

“D” Hole Punches available from: LADD Industrial Sales.
**Contact Insertion**

1. Grasp contact approximately (25.4 mm) one inch behind the contact crimp barrel.

2. Hold connector with rear grommet facing you.

3. Push contact straight into connector grommet until a positive stop is felt. A slight tug will confirm that it is properly locked in place.

**Contact Removal**

1. With rear insert toward you, snap appropriate size extractor tool over the wire of contact to be removed.

2. Slide tool along into the insert cavity until it engages contact and resistance is felt.

3. Pull contact-wire assembly out of connector.

**NOTE:** Do not twist or insert tool at an angle.
