General Texas Instruments High Voltage Evaluation (TI HV EVM) User Safety Guidelines

WARNING

Always follow TI's set-up and application instructions, including use of all interface components within their recommended electrical rated voltage and power limits. Always use electrical safety precautions to help ensure your personal safety and those working around you. Contact TI's Product Information Center <http://support/ti.com> for further information.

Save all warnings and instructions for future reference.

Failure to follow warnings and instructions may result in personal injury, property damage or death due to electrical shock and burn hazards.

The term TI HV EVM refers to an electronic device typically provided as an open framed, unenclosed printed circuit board assembly. It is *intended strictly for use in development laboratory environments, solely for qualified professional users having training, expertise and knowledge of electrical safety risks in development and application of high voltage electrical circuits. Any other use and/or application are strictly prohibited by Texas Instruments.* If you are not suitable qualified, you should immediately stop from further use of the HV EVM.

1. Work Area Safety:

- (a) Keep work area clean and orderly.
- (b) Qualified observer(s) must be present anytime circuits are energized.
- (c) Effective barriers and signage must be present in the area where the TI HV EVM and its interface electronics are energized, indicating operation of accessible high voltages may be present, for the purpose of protecting inadvertent access I
- (d) All interface circuits, power supplies, evaluation modules, instruments, meters, scopes and other related apparatus used in a development environment exceeding 50Vrms/75VDC must be electrically located within a protected Emergency Power Off EPO protected power strip.
- (e) Use stable and non conductive work surface.
- (f) Use adequately insulated clamps and wires to attach measurement probes and instruments. No freehand testing whenever possible.

2. Electrical Safety:

As a precautionary measure, it is always a good engineering practice to assume that the entire EVM may have fully accessible and active high voltages.

- (a) De-energize the TI HV EVM and all its inputs, outputs and electrical loads before performing any electrical or other diagnostic measurements. Revalidate that TI HV EVM power has been safely de-energized.
- (b) With the EVM confirmed de-energized, proceed with required electrical circuit configurations, wiring, measurement equipment hook-ups and other application needs, while still assuming the EVM circuit and measuring instruments are electrically live.
- (c) Once EVM readiness is complete, energize the EVM as intended.

WARNING

While the EVM is energized, never touch the EVM or its electrical circuits as they could be at high voltages capable of causing electrical shock hazard.

3. Personal Safety:

- (a) Wear personal protective equipment e.g. latex gloves or safety glasses with side shields or protect EVM in an adequate lucent plastic box with interlocks from accidental touch.

Limitation for safe use: EVMs are not to be used as all or part of a production unit.

TX517 Dual Channel, 17-Level With RTZ, Integrated Ultrasound Transmitter

TX517 is a fully integrated, dual channel, high voltage Transmitter designed by Texas Instruments Incorporated. This EVM provides a means to evaluate the functionality of the device. The EVM includes a FPGA to provide an embedded pattern generator and digital control of the device. The output pattern and configuration settings are controlled by 8 push buttons on the EVM.

1 Default Configuration

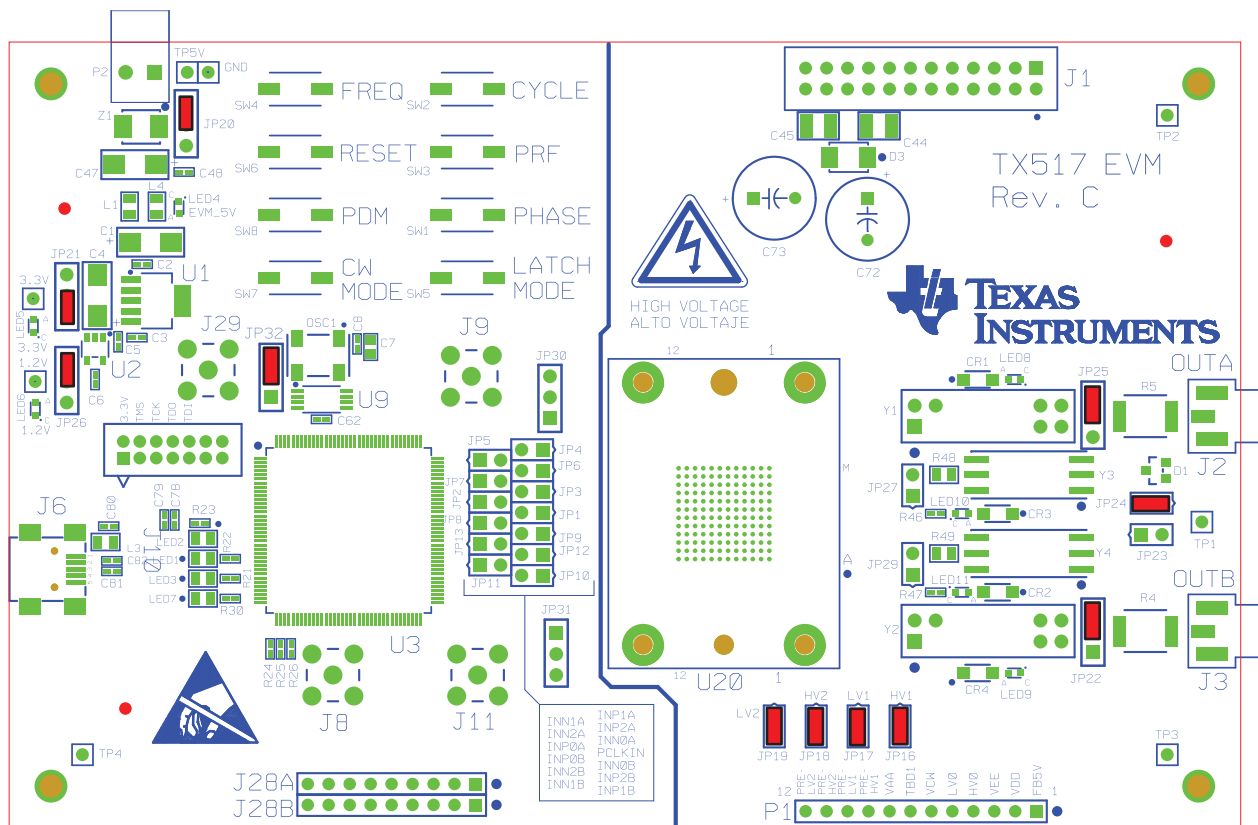

Figure 1. Tx517 EVM Basic Configuration

2 Buttons

There are eight buttons for controlling the output waveform settings. They are listed in [Table 1](#).

Table 1. Buttons

Button	Functionality
PHASE_BUTTON	Each time the button is pressed, the current INPx pattern becomes the pattern for INNx, the current INNx pattern becomes the pattern for INPx.
PRF_BUTTON	Changes the Pulse Repetition Frequency of the output waveform as given in Table 2 Each press increases the PRF and then cycles back to 0.
CYCLE_BUTTON	Changes the number of times the output pattern cycles within the pulse burst, as given in the Table 3 . Each press moves 1 level up and then back to 0
FREQ_BUTTON	Changes the Frequency of the output waveform as given in the Table 4 . Each press increases the frequency and then cycles back to 0
RESET_BUTTON	Reset all the setting to its default
PDM_BUTTON	One press changes the mode to Power down mode.
CW_MODE_BUTTON	First six times the button is pressed will change the pattern depth as shown in Table 5 . Seventh press will change the device to CW mode. In CW mode, pressing the button will revert back to 17-level. The latch mode is unaffected. Refer to Table 5 and Table 6 .
LATCH_MODE_BUTTON	First press changes to latch mode. Every consecutive pulse will toggle the mode between Latch and Non latch mode

Table 2. PRF

Index	PRF(kHz)	Comments
0	0.5	
1	1	
2	5	17-level Ramp Only
3	10	17-level Ramp Only

Table 3. Cycle

Index	PRF (kHz)	Comments
0	1	Longer than 5-level Only
1	2	Longer than 5-level Only
2	3	
3	5	
4	10	

Table 4. Frequency

Index	Frequency (MHz)	Comments
0	10	
1	20	
2	50	
3	100	

There are 7 patterns: 17-, 5-, 3-, 32-, 4- and 2-level. The patterns are given in [Table 6](#).

Table 5. Pattern Depth

Index	Pattern Depth	Comments
0	17	
1	5	
2	3	
3	32	
4	4	
5	2	
6	CW	

Table 6. Patterns of Different Level

17 level			5 level			3 level		
S/N	Pattern	Level	S/N	Pattern		S/N	Pattern	
1	516	8	1	516	8	1	516	8
2	514	7	2	1026	4	2	2145	0
3	577	6	3	2145	0	3	264	-8
4	1028	5	4	144	-4			
5	1026	4	5	264	-8			
6	1089	3						
7	2084	2						
8	2082	1						
9	2145	0						
10	81	-1						
11	73	-2						
12	2208	-3						
13	144	-4						
14	136	-5						
15	2336	-6						
16	272	-7						
17	264	-8						

3 SYNC Trigger

A **Sync trigger** pulse is generated at the start of the pattern transmission for triggering the monitoring device. Sync pulse will be 5 pattern clock cycle wide and it is active high. Sync pulse output thru J8 SMA connector..

4 Power up TX517

Connect +5V adaptor to P2 connector.

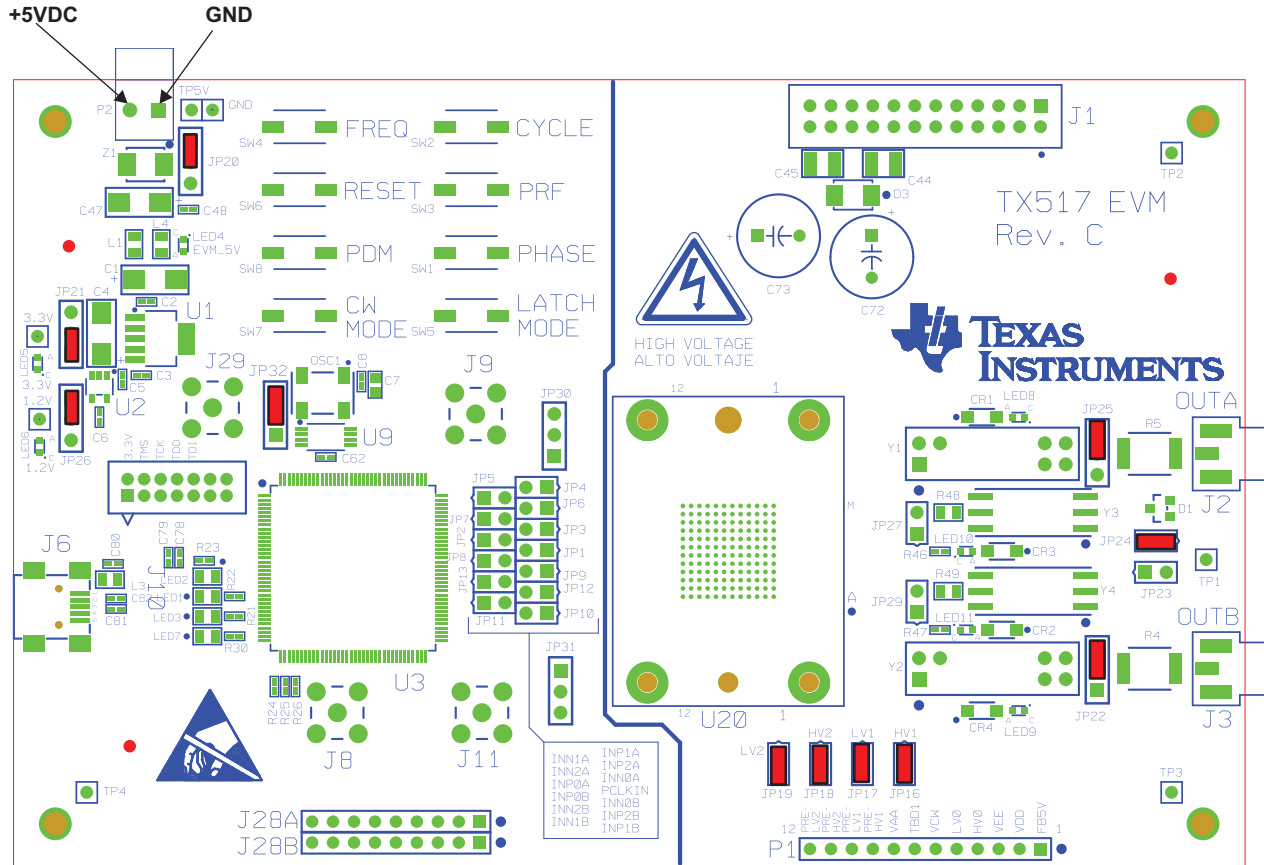

Figure 2. Power-Up Indications

5 Power Supplies for Output Waveform

Either J1-Header or P1-Header but not both, is used for this purpose.

WARNING

User may be exposed to high voltage depending on power supplies setting !

Table 7. Pin Definition for J1-Header

Pin	Voltage ⁽¹⁾	Pin	Voltage	COMMENT

6 Board Configuration

Table 9. Input/Output, Power, and USB

Connector	Description
P1	External power supplies to the device
P2	+5V power supply connector.
TP5V, TEST_GND	Test points for +5V power supply.
JP20	Jumper to select +5V or FB_5V.
JP21	Select +3.3V.
JP26	Select +1.2V
JP32	External clock/On board OSC
TP1,TP2,TP3,TP4	Ground test points.
TP33V, TP12V	Test points for +3.3V and +1.2V respectively.
JP16	Short always
JP17	Short always
JP18	Short always
JP19	Short always
JP22	Default setup is to output directly/ Others is to drive thru on board transformer.
JP25	JP25: Default setup is to output directly/ Others is to drive thru on board transformer.
JP23	Open when output directly. Short when driving thru transformer
JP24	Short always
JP27	Open
JP29	Open
JP1...JP13	Test points for test pattern. They can also be used for external test patterns.
JP30/JP31	CWINA/CWINB selection.
J6	USB interface connector

Table 10. LED Indicators

Reference Designator	Power Supply
LED1/LED2	USB interface indication
LED3/LED7	FPGA alive
LED4	+5V
LED5	+3.3V
LED6	+1.2V

Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive.**

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of -0.3 V to 5.3 V and the output voltage range of -0.3 V to 3.3 V .

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 50°C . The EVM is designed to operate properly with certain components above 25°C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
