Block Diagram

Note: Default gate resistor for R_g is 10Ω for the gate ON and OFF. The user can control the gate turn ON and OFF speed by changing R_g to a lower value and gain better efficiency. The user can also control the Gate turn-ON and OFF speed independently by populating $R_{g.off}$ and D1.

Typical Application

Mounting Instructions

Designed to directly mount to Cree 62 mm style power modules. Four (4) mounting holes for 4x M4-8, Nylon screws are provided to secure the board to a bracket or enclosure (0.5 Nm) for additional support.

External wires with spade style connectors should be used to connect the Desat detect pins (X10 & X11) from the module to the gate drive board.
