Product Advisory  
PowerMod® Pin and Socket Contacts

This product advisory is for PowerMod® contact part numbers: PM16S2024S32, PM16S1416S32, PM16P1416S30 and PM16S12S32 which are used in PowerMod®, SBS®75x and SPEC Pak® connectors.

One customer has experienced difficulty inserting PowerMod® contacts into connector housings. This difficulty was due to a dimension on the retaining clip that was out of specification. We have not seen this issue with other customers nor can this customer provide us with the lot code information from our packaging. This report, combined with the analysis we performed, leads us to believe that this issue is isolated to a single lot produced between September 2013 and October 2013.

Should you experience difficult inserting contacts into their respective housing, please contact customer service for an RMA.
