Section 1.Overview of Product Range

Developed for use in kiosk applications this range of Keyboards is suitable for use in exposed or hostile environments. Their robust construction is highly resistant to hard use, abuse and vandalism. They are sealed against water and dust to ensure responsive and reliable data entry in the most demanding situations.

2210 Keyboard, Vandal Resistant
Small Footprint
290mm x 118mm overall size

2210 Keyboard, Vandal Resistant
Small Footprint plus trackerball
360mm x 118mm overall size

2220 Keyboard. Vandal Resistant
Additional Function Keys
Medium Footprint 290mm x 137mm overall size

2230 Keyboard. QWERTY Layout,
Vandal Resistant Function Keys + Num. pad,
Large Footprint 346mm x 137mm overall size

Section 3. Ratings and Performance

The 2200 Series keyboard range is designed to meet the following requirements. Validation is by in-house test and additional third party assessment by an accredited test house, where appropriate. Storm 2200 Series keyboards are a UL Recognized Component.

DESCRIPTION	REFERENCE	RELATED BASIC STANDARD OR TEST METHOD	
Electrical			
EMC Emissions	EN55022 : 1998 Class B Limit		*
	FCC CFR 47 Part 15 Class B		*
EMC Immunity to ESD	EN55024 : 1998	EN 61000-4-2 :1995 ± 8kV Air ± 4kV Contact	*
EMC Immunity to Radiated Fields	EN55024 : 1998	EN61000-4-3 :1996	*
Electrical Safety	EN60950, UL60950 UL Recognized Component E230121		
Communication	Industry Standard PS2 or USB Interface		
Supply requirements – Voltage	+ 5V nominal (5.5 V to 4.75 V)		
Supply requirements – Current	60mA (with 2 LEDs illuminated)		
Environmental			
Sealing – Water / Particulates	EN60529 (sealing to IP65)		
Temperature	-20 °C to + 60 °C operating (dry)		
Mechanical			
Impact resistance	20 Joules via 50mm dia steel striker		
Key pitch	19mm		
Size	11mm square		
Travel	1.5mm nominal		
Actuation force	100g nominal		
Flammability of Major Plastic Parts	Keytops UL94 HB Moulding UL94 V-0 PCB UL94 V-0 Actuators UL94 HB		

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Section 4. Connectors and Connections

The 2200 range has as standard a selectable output for PS2 or USB. This is configured by the user via a switch on the encoder pcb at the time that the cables are fitted.

Connections

The 2200 keyboard is supplied without a cable so that the user can select the correct cable length and connector type to suit their application. Cables are offered as separately purchased options, or alternatively the user can source their own cable to suit the application. The pinout details for the connectors are shown on the following page.

Option 1 PS2 Minidin connector, straight cable, 2.5 metres long
Option 2 USB connector, straight cable, 2.5 metres long

Fitting Cables

WARNING : THE FOLLOWING MUST BE DONE IN AN ESSD SAFE HANDLING AREA
In order to fit the cable the pod cover on the back of the keyboard must be snapped open, and the molex connector plugged into the corresponding connector on board. Connect the earth tag to the securing nut and tighten. Set the positions of the USB / PS2 selector DIP switches. Note that position of SW2 does not matter.

	SW1	***SW2***	***SW3***
PS/2	*OFF*	*X*	*OFF*
USB	*ON*	*X*	*ON*

Ensure the grommet is correctly located into the slot in the pod; this provides strain relief and sealing. Close the pod cover.

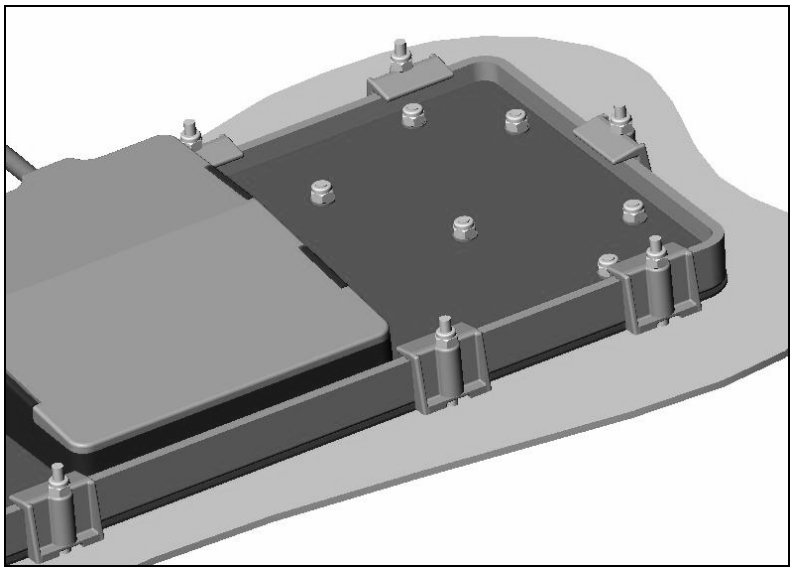
Section 5. Installation in host equipment

Underpanel use

The panel cutout sizes and space requirements for each size of 2200 keyboard are shown in Appendix 2 The overall requirements are as shown below

	2210	***2210 TB***	***2220***	***2230***
Overall Length mm (in)	*290.0 (11.4 in)*	*360.0 (14.2 in)*	*290.0 (11.4 in)*	*346.5 (13.6 in)*
Overall Width mm (in)	*117.6 (4.6 in)*	*117.6 (4.6 in)*	*136.5 (5.4 in)*	*136.5 (5.4 in)*
Overall Depth mm (in)	*18,5 plus 20 for pod (1.5 in. total)*	*18,5 plus 20 for pod (1.5 in. total)*	*18,5 plus 20 for pod (1.5 in. total)*	*18,5 plus 20 for pod (1.5 in. total)*
Weight Kg.	*1.05*	*1.8*	*1.5*	*2.2*
Underpanel cut out aperture dimensions (in) Panel thickness generally 2mm	*280.5 x 109.5 (11.0 x 4.3 in)*	*351.0 x 109.5*	*280.5 x 128.5 (11.0 x 5.0 in)*	*337.5 x 128.5*

The 2200 keyboard is designed to be mounted underpanel onto M3 studs, using the separately supplied mounting kit. See figure below for a scrap view.



Benchtop use

For use on top of a bench the 2200 requires a foot mounting kit (containing non-slip rubber feet) to be purchased separately and fitted to the rear of the unit prior to use.

This document is provided for use and guidance of engineering personnel engaged in the installation or application of STORM data entry products manufactured by Keymat Technology Ltd. Please be advised that all information, data, and illustrations contained within this document remain the exclusive property of Keymat Technology Ltd. and are provided for the express and exclusive use as described above. This document is not supported by Keymat Technology's engineering change note, revision or reissue system. Data contained within this document is subject to periodic revision, reissue or withdrawal. Whilst every effort is made to ensure the information, data and illustrations are correct at the time of publication, Keymat Technology Ltd. are not responsible for any errors or omissions contained within this document.

Section 6. Availability/Reliability/Maintainability.

Firmware

The firmware version is shown on the back of the microchip controller (visible when the pod is open).

Serviceability .

All STORM 2200 Series Keyboards are assembled in a clean purpose designed static free environment. Advanced and closely controlled cellular manufacturing techniques are used to ensure the keyboard remains responsive and reliable throughout it's operational life. The space enclosed within the keyboard casing is subjected to a vacuum test bar to establish a warranted and consistent water seal. For this reason the keyboard's performance, reliability and warranty will be compromised by any tampering or disassembly of major components.

As cables can become damaged in use, the keyboard's 'Interface Pod' [located on the keyboard's under surface] is designed to permit replacement or repair of the cable by any competent technician. If the selected STORM keyboard features a tracker ball, design provision has been made for the tracker ball to be replaced without disturbing the sealed section of the keyboard housing. Only STORM approved replacement parts should be used to ensure continued performance and reliability. The use of non-approved replacement parts may result in reduced performance and invalidated warranty.

The keyboard should be regularly cleaned by washing the operational surface with weak solution of detergent and water. Care should be taken to ensure that no liquids enter the rear face of the keyboard or the connector mechanism.

Warranty

Policy Statement

It is Keymat Technology's intention to provide a fair and rapid response when any customer reports a defect in any product supplied by Keymat Technology.

If a valid warranty claim is received, then it is our policy to repair, replace or provide a credit note for those defective products as quickly as possible and with minimum inconvenience to our customers.

Exclusions

Product shipped more than 12 months before the date of claim are not covered by warranty.
Product damaged by inappropriate use is not covered by warranty.
Product that has been modified is not covered by warranty.
Product where the serial numbers/ batch numbers have been removed or modified are not covered by warranty.

Release Codes.

The PC/AT release code for each key is the Scan Code preceded by H'F0.
*Example: Q – **H'F0', H'15.***

*Exception: Keys with Scan Codes starting with H'E0, the release code sequence (for example LEFT ARROW) is as follows: **H'E0', H'F0',H'6B.***
