**NON-PROGRAMMABLE | ON DELAY, INTERVAL, TRUE OFF DELAY & FLASHER**

**TR-5 SERIES**

- Onboard & remote adjustable or fixed time delays from 0.05 seconds to 2 hours
- Uses industry-standard 8 pin octal sockets
- 10A DPDT output contacts

![Time Delay Relays](image)

- See “Definitions of Timing Functions”.
- Complete Product Number using two-digit Code from Table below.
- Note: If these products are ordered with the Remote Adjustable Time Delay modification (suffix -Rx), they will require an 11 pin octal socket—see www.macromatic.com/remote for information. Remote Adjustable Time Delay not available on TR-506 products.

**TIME DELAYS**

TR-5 Series Products have three time delay options:

- **Onboard Adjustable Time Delay**—complete Product Number by adding two-digit Code from Table at right, i.e., TR-50222-05 is an On Delay with a time delay range of 0.1-10 seconds.
- **Onboard Fixed Time Delay**—replace two-digit Code with suffix “F” followed by delay [0.1 ... 100] followed by (S) seconds, (M) minutes or (H) hours, i.e., TR-50222-F5S is an On Delay with a time delay fixed at 5 seconds.
- **Remote Adjustable Time Delay**—Selected TR-5 Series products can be built with two terminals for remote adjustable or fixed time delays. See www.macromatic.com/remote for information.

**See “Definitions of Timing Functions”.

**Complete Product Number using two-digit Code from Table below.

▲ 8 Pin SPDT versions of these functions (except Single Shot Falling Edge) are available.

### Definitions of Timing Functions

- **Off Delay:** Time delay from signal activation to output closure. The output remains closed after the delay has expired.
- **Single Shot:** Only one output cycle per input cycle. The output turns off after the first cycle and remains off until the next input cycle.
- **Watchdog:** A single-shot delay that can be retriggered by an input signal. It can be used to check if a system is functioning properly.

**Notes:**

- **Non-programmable:** OFF DELAY, SINGLE SHOT, WATCHDOG & SINGLE SHOT FALLING EDGE
- **TR-5 Series products:** Plug-in time delay relays

Build your Time Delay Relays with the Online Product Builder
Application Data

Voltage Tolerance:
AC Operation: +10/-15% of nominal at 50/60 Hz.
DC Operation: +10/-15% of nominal.

Load (Burden):
Maximum of 2 VA for all voltages

Setting Accuracy:
Maximum Setting (Adjustable): +5%, -0%
Minimum Setting (Adjustable): +0%, -50%
Fixed Time Delay: ±2% or 50ms, whichever is greater

Repeat Accuracy (constant voltage and temperature): ±0.1% or ± 0.04 seconds, whichever is greater

Reset Time:
Input Voltage (All Functions) 0.100 Seconds
Triggered Functions only 0.04 Seconds

Start-up Time:
(Time from when power is applied until unit is timing)
0.05 Seconds

Maintain Function Time:
(Time unit continues to operate after power is removed)
0.01 Seconds for all units

Temperature:
Operating: -28°C to 65°C (-18°F to 149°F)
Storage: -40°C to 85°C (-40°F to 185°F)

Output Contacts:
(All TR-5 Series Products except TR-506 & TR-546)
DPDT 10A @ 240V AC/30V DC,
1/2HP @ 120/240V AC (N.O.), 1/3HP @ 120/240V AC (N.C.)
B300 & R300, AC15 & DC13

(TR-506 & TR-546)
DPDT 10A @ 240V AC; 8A @ 28V DC,
1/2 HP @ 240V AC, 1/4HP @ 120V AC
B300 & R300

Life:
Mechanical: 10,000,000 operations (2,000,000 operations on TR-506 & TR-546 Series only)
Full Load: 100,000 operations

Compatibility:
Using a solid state switch to initiate the time sequence is acceptable. See www.macromatic.com/leakage or contact Macromatic for information regarding leakage current limits and other solid state design considerations.

Triggering Off Delay, Single Shot or Watchdog Units:
Timing sequence must be initiated only after input voltage is applied to unit. Minimum required trigger switch closure time is 0.05 seconds.

IMPORTANT FOR TR-506 & TR-546 SERIES ONLY:
These relays are shipped from the factory in the OFF state. A shock to the relay during shipping or installation may cause it to change to the ON state. It is recommended that input voltage be applied to the product for at least 0.1 second and removed to cycle the unit to the OFF state prior to use in the application. Please note that it will take as long as the OFF Delay setting to reset the unit once input voltage has been removed.

Approvals:
(All TR-5 Series Products except TR-506 & TR-546)

(TR-506 & TR-546 only)

DEFINITION OF TIMING FUNCTIONS

Understanding the differences between all the functions available in time delay relays can sometimes be a daunting task. To begin with, time delay relays are simply control relays with a time delay built in. Their purpose is to control an event based on time.

Typically, time delay relays are initiated or triggered by one of two methods, depending on the function:
- application of input voltage
- application of a trigger

These triggers can be one of two signals: a control switch (dry contact), i.e., limit switch, push button, float switch, etc., or voltage (commonly known as a power trigger).

CAUTION: any time delay relay that is designed to be initiated with a dry contact control switch trigger could be damaged if voltage is applied to the trigger switch terminals. Only products that have a “power trigger” should be used with voltage as the trigger.

To help understand, some definitions are important:
- Input Voltage - control voltage applied to the input terminals. Depending on the function, input voltage will either initiate the unit or make it ready to initiate when a trigger is applied.
- Trigger - on certain timing functions, a trigger is used to initiate the unit after input voltage has been applied. As noted above, this trigger can either be a control switch (dry contact switch) or a power trigger (voltage).
- Output (Load) - every time delay relay has an output (either mechanical relay or solid state) that will open & close to control the load. Note that the user must provide the voltage to power the load being switched by the output contacts of the time delay relay. In all wiring diagrams, the output is shown in the normal de-energized position.

Below and on the following pages are both written and visual descriptions on how the common timing functions operate. A Timing Chart shows the relationship between Input Voltage, Trigger (if present) and Output. If you cannot find a product to fit your requirements or have any questions, Macromatic’s Application Engineers offer technical information along with product selection and application assistance. Call us at 800-238-7474 or e-mail us tech-help@macromatic.com.

<tr>
<td><strong>FLASHER</strong> (ON First) <strong>F</strong></td>
<td>Upon application of input voltage, the output is energized and the time delay ( t ) begins. At the end of the time delay ( t ), the output is de-energized and remains in that condition for the time delay ( t ). At the end of the time delay ( t ), the output is energized and the sequence repeats until input voltage is removed.</td>
<td><img src="chart2" alt="Timing Chart for Flasher (ON First)" /></td>
</tr>
<tr>
<td><strong>ON/OFF DELAY</strong> <strong>G</strong></td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the time delay ( t_1 ) begins. At the end of the time delay ( t_1 ), the output is energized. When the trigger is removed, the output contacts remain energized for the time delay ( t_2 ). At the end of the time delay ( t_2 ), the output is de-energized &amp; the time delay relay is ready to accept another trigger. If the trigger is removed during time delay period ( t_1 ), the output will remain de-energized and time delay ( t_1 ) will reset. If the trigger is removed during time delay period ( t_2 ), the output will remain energized and the time delay ( t_2 ) will reset.</td>
<td><img src="chart3" alt="Timing Chart for On/Off Delay" /></td>
</tr>
<tr>
<td><strong>SINGLE SHOT FALLING EDGE</strong> <strong>H</strong></td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the output remains de-energized. Upon removal of the trigger, the output is energized and the time delay ( t ) begins. At the end of the time delay ( t ), the output is de-energized unless the trigger is removed and re-applied prior to time out (before time delay ( t ) elapses). Continuous cycling of the trigger at a rate faster than the time delay ( t ) will cause the output to remain energized indefinitely.</td>
<td><img src="chart4" alt="Timing Chart for Single Shot Falling Edge" /></td>
</tr>
<tr>
<td><strong>WATCHDOG Retriggerable Single Shot</strong> <strong>J</strong></td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the output is energized and the time delay ( t ) begins. At the end of the time delay ( t ), the output is de-energized unless the trigger is removed and re-applied prior to time out (before time delay ( t ) elapses). Continuous cycling of the trigger at a rate faster than the time delay ( t ) will cause the output to remain energized indefinitely.</td>
<td><img src="chart5" alt="Timing Chart for Watchdog Retriggerable Single Shot" /></td>
</tr>
<tr>
<td><strong>TRIGGERED ON DELAY</strong> <strong>K</strong></td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the time delay ( t ) begins. At the end of the time delay ( t ), the output is energized and remains in that condition as long as either the trigger is applied or the input voltage remains. If the trigger is removed during the time delay ( t ), the output remains de-energized &amp; the time delay ( t ) is reset.</td>

<tr>
<td><strong>Delayed Interval Single Cycle</strong> N</td>
<td>Upon application of input voltage, the time delay (t1) begins. At the end of the time delay (t1), the output is energized and remains in that condition for the time delay (t2). At the end of this time delay (t2), the output is de-energized. Input voltage must be removed to reset the time delay relay.</td>
<td><img src="chart3.png" alt="Timing Chart for Delayed Interval Single Cycle" /></td>
</tr>
<tr>
<td><strong>Triggered Delayed Interval</strong> P</td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the time delay (t1) begins. At the end of the time delay (t1), the output is energized and remains in that condition for the time delay (t2). At the end of this time delay (t2), the output is de-energized &amp; the relay is ready to accept another trigger. During both time delay (t1) &amp; time delay (t2), the trigger is ignored.</td>
<td><img src="chart4.png" alt="Timing Chart for Triggered Delayed Interval" /></td>
</tr>
<tr>
<td><strong>True Off Delay</strong> R</td>
<td>Upon application of input voltage, the output is energized. When the input voltage is removed, the time delay (t) begins. At the end of the time delay (t), the output is de-energized. Input voltage must be applied for a minimum of 0.5 seconds to assure proper operation. Any application of the input voltage during the time delay (t) will reset the time delay. No external trigger is required.</td>
<td><img src="chart5.png" alt="Timing Chart for True Off Delay" /></td>
</tr>
<tr>
<td><strong>On Delay/True Off Delay</strong> S</td>
<td>Upon application of input voltage, the time delay (t1) begins. At the end of the time delay (t1), the output is energized. When the input voltage is removed, the output remains energized for the time delay (t2). At the end of the time delay (t2), the output is de-energized. Input voltage must be applied for a minimum of 0.5 seconds to assure proper operation. Any application of the input voltage during the time delay (t2) will keep the output energized &amp; reset the time delay (t2). No external trigger is required.</td>
<td><img src="chart6.png" alt="Timing Chart for On Delay/True Off Delay" /></td>
</tr>
<tr>
<td><strong>Single Shot-Flashe</strong> T</td>
<td>Upon application of input voltage, the time delay relay is ready to accept a trigger. When the trigger is applied, the time delay (t1) begins and the output is energized for the time delay (t2). At the end of this time delay (t2), the output is de-energized and remains in that condition for the time delay (t2). At the end of the time delay (t2), the output is energized and the sequence repeats until time delay (t1) is completed. During the time delay (t1), the trigger is ignored.</td>
<td><img src="chart7.png" alt="Timing Chart for Single Shot-Flashe" /></td>
</tr>
<tr>
<td><strong>On Delay-Flashe</strong> X</td>
<td>Upon application of input voltage, the time delay begins (t1). At the end of the time delay (t1), the output is energized and remains in that condition for the time delay (t2). At the end of this time delay (t2), the output is de-energized and remains in that condition for the time delay (t2). At the end of the time delay (t2), the output is energized and the sequence repeats until input voltage is removed.</td>
<td><img src="chart8.png" alt="Timing Chart for On Delay-Flashe" /></td>

# SOCKETS & ACCESSORIES

### 8 Pin Octal Socket - Surface or DIN Rail-Mounted

- **Catalog Number:** 70169-D
- **Specifications:**
  - 10A @ 600V
  - 1 or 2 #12-22 AWG Wire
  - Recommended Tightening Torque of 7 in-lbs. (12 in-lbs maximum)
  - Pressure Wire Clamp Terminations

### 11 Pin Octal Socket - Surface or DIN Rail-Mounted

- **Catalog Number:** 70170-D
- **Specifications:**
  - 10A @ 300V
  - 1 or 2 #12-22 AWG Wire
  - Recommended Tightening Torque of 7 in-lbs. (12 in-lbs maximum)
  - Pressure Wire Clamp Terminations

### 8 Pin Octal Socket - Back-Mounted

- **Catalog Number:** SR6P-M08G
- **Specifications:**
  - 10A @ 300V
  - Pressure Wire Clamp Terminations

### 11 Pin Octal Socket - Back-Mounted

- **Catalog Number:** SR6P-M11G
- **Specifications:**
  - 10A @ 300V
  - Pressure Wire Clamp Terminations
Hold Down Spring
Catalog Number 70166

Can be used for:
◆ Panel-Mounted Sockets
◆ Sockets Mounted to 35mm DIN Rail *

* Requires two machine screws with washers & nuts--contact Macromatic or [www.macromatic.com/70166](http://www.macromatic.com/70166) for more information.

DIN Rail Adaptor Kit
Catalog Number 70500

Quick & Economical Way to Install Any THx Series 2” x 2” Encapsulated Time Delay Relays on 35mm DIN Rail
◆ Clip Comes with a Threaded Hole to Eliminate Need for a Washer & Nut
◆ All Mounting Hardware Included
