

Gigabit 2x2 CROSSPOINT SWITCH

FEATURES

- Up to 4.25 Gbps Operation
- Non-blocking Architecture Allows Each Output to be Connected to Any Input
- 30 ps of Deterministic Jitter
- Selectable Transmit Pre-Emphasis Per Lane
- Receive Equalization
- Available Packaging 24 Pin QFN
- Propagation Delay Times: 500 ps Typical
- Inputs Electrically Compatible With CML Signal Levels
- Operates From a Single 3.3-V Supply
- Ability to 3-STATE Outputs
- Low Power: 290 mW (typ)
- Integrated Termination Resistors

APPLICATIONS

- Clock Buffering/Clock MUXing
- Wireless Base Stations
- High-Speed Network Routing
- Telecom/Datacom
- XAUI 802.3ae Protocol Backplane Redundancy

DESCRIPTION

The SN65LVCP402 is a 2x2 non-blocking crosspoint switch in a flow-through pin-out allowing for ease in PCB layout. VML signaling is used to achieve a high-speed data throughput while using low power. Each of the output drivers includes a 2:1 multiplexer to allow any input to be routed to any output. Internal signal paths are fully differential to achieve the high signaling speeds while maintaining low signal skews. The SN65LVCP402 incorporates 100-Ω termination resistors for those applications where board space is a premium. Built-in transmit pre-emphasis and receive equalization for superior signal integrity performance.

The SN65LVCP402 is characterized for operation from -40°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

LOGIC DIAGRAM

Note:

V_{BB}: Receiver input internal biasing voltage (allows ac coupling)

EQ: Input Equalizer (compensates for frequency dependent transmission line loss of backplanes)

R_T: Internal 50-Ohm receiver termination (100-Ohm differential)

Preemphasis: Output precompensation for transmission line losses

TERMINAL FUNCTIONS

TERMINAL		TYPE	DESCRIPTION
NAME	NO.		
High Speed I/O			
xA xB	2, 5 3, 6	Differential Inputs (with 50-Ω termination to V _{BB}) xA=P; xB=N	Line Side Differential Inputs CML compatible
xY xZ	17, 14 16, 13	Differential Output xY=P; xZ=N	Switch Side Differential Outputs. VML
Control Signals			
x \overline{DE}	24, 7	Input	Data Enable; Active Low; LVTTTL; When not enabled the output is in 3-STATE mode for power savings
S1, S2	1, 18	Input; S1 = Channel 1	Switching Selection; LVTTTL
P11-P22	22, 21, 9, 10	Input; P11- Channel 1 bit one	Output Preemphasis Control; LVTTTL
EQ	23	Input: Selection for Receive Equalization Setting	EQ=1 (default) is for the 5 dB setting; EQ=0 is for the 12 dB setting
Power Supply			
VCC	8, 12, 19	Power	Power Supply 3.3 V ±5%
GND	11, 15, 20		
Thermal Pad	Thermal Pad		The ground center pad of the package must be connected to GND plane with thermal vias.
V _{BB}	4	Input	Receiver input biasing voltage. For ac coupling, V _{BB} should be left floating for optimal bias value. For dc coupling, V _{BB} can be driven to change the common mode. V _{BB} should not be tied to ground.

AVAILABLE OPTIONS

T _A	DESCRIPTION	PACKAGED DEVICE ⁽¹⁾⁽²⁾
		RGE (24 pin)
-40°C to 85°C	Serial multiplexer	SN65LVCP402

(1) The package is available taped and reeled. Add an R suffix to device types (e.g., SN65LVCP402RGER).

(2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

DISSIPATION RATINGS

PACKAGE THERMAL CHARACTERISTICS ⁽¹⁾		
Parameter	Conditions	NOM
θ_{JA} (junction-to-ambient) #1	4-layer JEDEC Board (JESD51-7), Airflow = 0 ft/min	106.6 C/W
θ_{JA} (junction-to-ambient) #2	4-layer JEDEC Board (JESD51-7) using 4 Thermal-vias of 22-mil diameter each, Airflow = 0 ft/min	55.4 C/W

(1) See application note [SPRA953](http://www-s.ti.com/sc/psheets/spra953/spra953.pdf) for a detailed explanation of thermal parameters (<http://www-s.ti.com/sc/psheets/spra953/spra953.pdf>).

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		UNIT	
V_{CC}	Supply voltage range ⁽²⁾	–0.5 V to 6 V	
V_I	Voltage range	Control inputs, all outputs	–0.5 V to ($V_{CC} + 0.5$ V)
		Receiver inputs	–0.5 V to 4 V
ESD	Human Body Model ⁽³⁾	All pins	4 kV
	Charged-Device Model ⁽⁴⁾	All pins	500 V
T_J	Maximum junction temperature	See Package Thermal Characteristics Table	
	Moisture sensitivity level	2	
	Reflow temperature package soldering, 4 seconds	260°C	

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.

(3) Tested in accordance with JEDEC Standard 22, Test Method A114-A.

(4) Tested in accordance with JEDEC Standard 22, Test Method C101.

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT	
dR	Operating data rate			4.25	Gbps	
V _{CC}	Supply voltage	3.135	3.3	3.465	V	
V _{CC(N)}	Supply voltage noise amplitude	10 Hz to 2 GHz		20	mV	
T _J	Junction temperature			125	°C	
T _A	Operating free-air temperature ⁽¹⁾	-40		85	°C	
DIFFERENTIAL INPUTS						
V _{ID}	Receiver peak-to-peak differential input voltage ⁽²⁾	dR _(in) ≤ 1.25 Gbps		100	1750	mV _{PP}
		1.25 Gbps < dR _(in) ≤ 3.125 Gbps		100	1560	mV _{PP}
		dR _(in) > 3.125 Gbps		100	1000	mV _{PP}
V _{ICM}	Receiver common-mode input voltage	Note: for best jitter performance ac coupling is recommended.		1.5	1.6 V _{CC} - $\frac{ V_{ID} }{2}$	V
CONTROL INPUTS						
V _{IH}	High-level input voltage	2		V _{CC} + 0.3	V	
V _{IL}	Low-level input voltage	-0.3		0.8	V	
DIFFERENTIAL OUTPUTS						
R _L	Differential load resistance	80	100	120	Ω	

(1) Maximum free-air temperature operation is allowed as long as the device maximum junction temperature is not exceeded.

(2) Differential input voltage V_{ID} is defined as |IN+ – IN–|.

ELECTRICAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
DIFFERENTIAL INPUTS					
V _{IT+}	Positive going differential input high threshold			50	mV
V _{IT–}	Negative going differential input low threshold	-50			mV
A _(EQ)	Equalizer gain	at 1.875 GHz (EQ=0)		12	dB
R _{T(D)}	Termination resistance, differential	80	100	120	Ω
V _{BB}	Open-circuit Input voltage (input self-bias voltage)	AC-coupled inputs		1.6	V
R _(BBDC)	Biassing network dc impedance		30		kΩ
R _(BBAC)	Biassing network ac impedance	375 MHz	42		Ω
		1.875 GHz	8.4		
DIFFERENTIAL OUTPUTS					
V _{ODH}	High-level output voltage	R _L = 100 Ω ±1%, PRES_1 = PRES_0=0; PREL_1 = PREL_0=0; 4 Gbps alternating 1010-pattern; Figure 3		650	mV _{PP}
V _{ODL}	Low-level output voltage			-650	mV _{PP}
V _{ODB(PP)}	Output differential voltage without preemphasis ⁽²⁾	1000	1300	1500	mV _{PP}
V _{OCM}	Output common mode voltage			1.65	V
ΔV _{OC(SS)}	Change in steady-state common-mode output voltage between logic states	See Figure 2		1	mV

(1) All typical values are at T_A = 25°C and V_{CC} = 3.3 V supply unless otherwise noted. They are for reference purposes and are not production tested.

(2) Differential output voltage V_(ODB) is defined as |OUT+ – OUT–|.

ELECTRICAL CHARACTERISTICS (continued)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
$V_{(PE)}$	Output preemphasis voltage ratio, $\frac{V_{ODB(PP)}}{V_{ODPE(PP)}}$	$R_L = 100 \Omega \pm 1\%$; $x = \text{Channel 1 or 2}$; See Figure 3				dB
		$Px_2:Px_1 = 00$		0		
		$Px_2:Px_1 = 01$		3		
		$Px_2:Px_1 = 10$		6		
		$Px_2:Px_1 = 11$		9		
$t_{(PRE)}$	Preemphasis duration measurement	Output preemphasis is set to 9 dB during test $PREx_x = 1$; Measured with a 100-MHz clock signal; $R_L = 100 \Omega \pm 1\%$, See Figure 4		175		ps
r_o	Output resistance	Differential on-chip termination between OUT+ and OUT–		100		Ω
CONTROL INPUTS						
I_{IH}	High-level Input current	$V_{IN} = V_{CC}$			5	μA

I_{CC}	Device current consumption	All outputs terminated 100 Ω			115	mA
		PRBS 2 ⁷⁻¹ pattern at 4 Gbps				

SWITCHING CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
MULTIPLEXER						
$t_{(SM)}$	Multiplexer switch time	Multiplexer to valid output		3	6	ns
DIFFERENTIAL OUTPUTS						
t_{PLH}	Low-to-high propagation delay	Propagation delay input to output See Figure 6		0.5	0.7	ns
t_{PHL}	High-to-low propagation delay			0.5	0.7	ns
t_r	Rise time	20% to 80% of $V_{O(DB)}$; Test Pattern: 100-MHz clock signal; See Figure 5 and Figure 8		80		ps
t_f	Fall time			80		ps
$t_{sk(p)}$	Pulse skew, $ t_{PHL} - t_{PLH} $ ⁽²⁾				20	ps
$t_{sk(o)}$	Output skew ⁽³⁾	All outputs terminated with 100 Ω		25	100	ps
$t_{sk(pp)}$	Part-to-part skew ⁽⁴⁾				300	ps
t_{zd}	3-State switch time to disable	Assumes 50 Ω to V_{cm} and 150 pF load on each output			20	ns
t_{ze}	3-State switch time to enable	Assumes 50 Ω to V_{cm} and 150 pF load on each output			10	ns
RJ	Device random jitter, rms	See Figure 8 for test circuit. BERT setting 10 ⁻¹⁵ Alternating 10-pattern.		0.8	2	ps-rms

(1) All typical values are at 25°C and with 3.3 V supply unless otherwise noted.

(2) $t_{sk(p)}$ is the magnitude of the time difference between the t_{PLH} and t_{PHL} of any output of a single device.(3) $t_{sk(o)}$ is the magnitude of the time difference between the t_{PLH} and t_{PHL} of any two outputs of a single device.(4) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

SWITCHING CHARACTERISTICS (continued)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS			MIN	TYP ⁽¹⁾	MAX	UNIT
DJ	Intrinsic deterministic device jitter ⁽⁵⁾⁽⁶⁾ , peak-to-peak	0 dB preemphasis (PRE _x = 0); See Figure 8 for the test circuit.	PRBS 2 ⁷⁻¹ pattern	4 Gbps			30	ps
	Absolute deterministic output jitter ⁽⁷⁾ , peak-to-peak	0 dB preemphasis (PRE _x = 0); See Figure 8 for the test circuit.	PRBS 2 ⁷⁻¹ pattern	1.25 Gbps Over 20-inch FR4 trace 4 Gbps Over FR4 trace 2-inch to 20 inches long		7	20	ps

- (5) Intrinsic deterministic device jitter is a measurement of the deterministic jitter contribution from the device. It is derived by the equation $(DJ_{(OUT)} - DJ_{(IN)})$, where $DJ_{(OUT)}$ is the total peak-to-peak deterministic jitter measured at the output of the device in PSPP. $DJ_{(IN)}$ is the peak-to-peak deterministic jitter of the pattern generator driving the device.
- (6) The SN65LVCP402 built-in passive input equalizer compensates for ISI. For a 20-inch FR4 transmission line with 8-mil trace width, the LVCP402 typically reduces jitter by 60 ps from the device input to the device output.
- (7) Absolute deterministic output jitter reflects the deterministic jitter measured at the SN65LVCP402 output. The value is a real measured value with a Bit error tester as described in [Figure 8](#). The absolute DJ reflects the sum of all deterministic jitter components accumulated over the link: $DJ_{(absolute)} = DJ_{(Signal\ generator)} + DJ_{(transmission\ line)} + DJ_{(intrinsic(LVCP402))}$.

Figure 8. AC Test Circuit — Jitter and Output Rise Time Test Circuit

The SN65LVCP402 input equalizer provides 5-dB frequency gain to compensate for frequency loss of a shorter backplane transmission line. For characterization purposes, a 24-inch FR-4 coupled transmission line is used in place of the backplane trace. The 24-inch trace provides roughly 5 dB of attenuation between 375 MHz and 1.875 GHz, representing closely the characteristics of a short backplane trace. The loss tangent of the FR4 in the test board is 0.018 with an effective $\epsilon(r)$ of 3.1.

APPLICATION INFORMATION

BANDWIDTH REQUIREMENTS

Error free transmission of data over a transmission line has specific bandwidth demands. It is helpful to analyze the frequency spectrum of the transmit data first. For an 8B10B coded data stream at 3.75 Gbps of random data, the highest bit transition density occurs with a 1010 pattern (1.875 GHz). The least transition density in 8B10B allows for five consecutive ones or zeros. Hence, the lowest frequency of interest is $1.875 \text{ GHz}/5 = 375 \text{ MHz}$. Real data signals consist of higher frequency components than sine waves due to the fast rise time. The faster the rise time, the more bandwidth becomes required. For 80-ps rise time, the highest important frequency component is at least $0.6/(\pi \times 80 \text{ ps}) = 2.4 \text{ GHz}$. Figure 17 shows the Fourier transformation of the 375-MHz and 1.875-GHz trapezoidal signal.

Figure 17. Approximate Frequency Spectrum of the Transmit Output Signal With 80 ps Rise Time

The spectrum analysis of the data signal suggests building a backplane with little frequency attenuation up to 2 GHz. Practically, this is achievable only with expensive, specialized PCB material. To support material like FR4, a compensation technique is necessary to compensate for backplane imperfections.

EXPLANATION OF EQUALIZATION

Backplane designs differ widely in size, layer stack-up, and connector placement. In addition, the performance is impacted by trace architecture (trace width, coupling method) and isolation from adjacent signals. Common to most commercial backplanes is the use of FR4 as board material and its related high-frequency signal attenuation. Within a backplane, the shortest to longest trace lengths differ substantially – often ranging from 8 inches up to 40 inches. Increased loss is associated with longer signal traces. In addition, the backplane connector often contributes a good amount of signal attenuation. As a result, the frequency signal attenuation for a 300-MHz signal might range from 1 dB to 4 dB while the corresponding attenuation for a 2-GHz signal might span 6 dB to 24 dB. This frequency dependent loss causes distortion jitter on the transmitted signal. Each LVCP402 receiver input incorporates an equalizer and compensates for such frequency loss. The SN65LVCP402 equalizer provides 5/12 dB of frequency gain between 375 MHz and 1.875 GHz, compensating roughly for 20 inches of FR4 material with 8-mil trace width. Distortion jitter improvement is substantial, often providing more than 30-ps jitter reduction. The 5-dB compensation is sufficient for most short backplane traces. For longer trace lengths, it is recommended to enable transmit preemphasis in addition.

SETTING THE PREAMPHASIS LEVEL

The receive equalization compensates for ISI. This reduces jitter and opens the data eye. In order to find the best preemphasis setting for each link, calibration of every link is recommended. Assuming each link consists of a transmitter (with adjustable pre-emphasis such as LVCP402) and the LVCP402 receiver, the following steps are necessary:

1. Set the transmitter and receiver to 0-dB preemphasis; record the data eye on the LVCP402 receiver output.
2. Increase the transmitter preemphasis until the data eye on the LVCP402 receiver output looks the cleanest.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL PAD MECHANICAL DATA

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

4206344-3/AG 04/14

NOTES: A. All linear dimensions are in millimeters

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
