Programmable DC Power Supplies

Data Sheet
Reliable Power, Repeatable Results

- Single and dual outputs
- Dual range output
- 30 W to 100 W output power
- Front and rear output terminals
- Over-voltage protection
- Remote Sensing
- GPIB and RS-232 standard
- Save and recall functions

Great Performance, Outstanding Price

With the output power of 30 to 100 W, the Keysight Technologies, Inc. E364xA Series programmable DC power supplies provide great performance at a great price. All ten models deliver clean power, excellent regulation, fast transient response and built-in GPIB and RS-232 interfaces. They are designed to meet the needs of R&D design verification, production testing, QA verifications, and other demanding applications with Keysight Technologies’s quality and reliability.

Steady Output

With 0.01 percent load and line regulation, Keysight E364xA power supplies are able to maintain a steady output when power line and load changes occur. They also specify normal mode voltage noise and low common mode current noise. The low normal mode noise specification assures clean power for precision circuitry applications, and the low common mode current provides isolation from power line current injection. Keysight E364xA power supplies specify less than 90 msec of voltage settling time at any output load condition.

Remote Interface

Keysight E364xA power supplies support any PC with a GPIB (IEEE-488) card or RS-232 interface. Every model ships standard with both GPIB and RS-232. The easy-to-use SCPI (Standard Commands for Programmable Instruments) allow fast and simple programming procedures. Besides, the user manual provides sufficient information on programming for all end users, from beginners to veterans.

Broad Support

VXI plug and play software drivers are available for Keysight VEE, National Instruments LabView and LabWindows. With these drivers, integration of the E364xA into your system can never be any easier. The drivers are supported under Microsoft Windows 98 and NT.

Versatile Power

Keysight E364xA power supplies give you the flexibility to select from dual output ranges. Output load is protected against overvoltage, which can be easily monitored and adjusted from the front panel and remote interface. Remote sensing is available in the rear terminal to eliminate errors caused by voltage drops on the load leads. These power supplies offer new versatile binding posts on the front panel and screw-type terminals on the rear panel. New front panel binding posts allow you to use safety test leads as well as conventional banana clips and stripped wires. An optional rackmount kit is available. The Keysight E364xA Series employs a cooling fan with automatic speed control to reduce the acoustic noise.

Front Panel Operation

An easy-to-use rotary knob and self-guiding keypads allow you to set the output at your desired resolution without any effort. Also, both voltage and current levels can be set to a maximum resolution of 10 mV/1 mA from the front panel. In addition, you can store and recall for up to five complete power supply setups using the internal non-volatile memory.

The output on/off button sets the output to zero. If you own a dual output model, you can view two voltages or currents that are displayed simultaneously.
Highly visible vacuum fluorescent display

Selectable dual range provides flexibility and convenience

Electronic calibration from the front panel

Store and recall up to five different operating statuses in non-volatile storage locations

Set the overvoltage protection and enable the overvoltage protection circuit

Rotary knob for quick and analog-like control of voltage and current

Tough handle for easy carriage and unit prop-up

Versatile binding posts offer flexibility to use safety test leads, banana plugs or stripped wires

1 year warranty protects your investment

Built-in GPIB and RS-232 interfaces

Cooling fan with automatic speed control for low acoustic noise

- **OVP**
  - Accuracy, ± (% output + offset): < 0.5% + 0.5 V
  - Activation time: < 1.5 msec, OVP ¥3 V/< 10 msec, OVP < 3 V

---

1. Accuracy specifications are valid after a 1-hour warm-up with no load and calibration at 25 ºC.
2. Meter accuracy specification is at minimum 10 mV decimal limited by front panel resolution.
3. Maximum time required for the output voltage to change from 1% to 99% or vice versa following the receipt of VOLTage or APPLy command via direct GPIB or RS-232 interface.
4. Average time for output to start and drop after an OVP condition occurred.
