WM8311

Processor Power Management Subsystem

DESCRIPTION

WM8311 is an integrated power-management subsystem which provides a cost-effective, flexible, single-chip solution for power management, specifically targeted at the requirements of a range of low-power portable applications. WM8311 is specifically designed to operate as a system PMIC supporting a variety of industry standard processors and accessories in a wide range of applications.

The start-up behaviour and configuration is fully programmable in an integrated OTP non-volatile memory. This highly flexible solution helps reduce time-to-market, as changing application requirements can be very easily accommodated.

The WM8311 power management subsystem comprises of four programmable DC-DC converters, seven LDO regulators (one of which is low-noise for supplying sensitive analogue subsystems). The integrated OTP bootstrap circuitry controls the start-up sequencing and voltages of the converters and regulators as well as the sequencing of system clocks.

WM8311 can be powered from a battery, a wall adaptor or from a USB power source. An on-chip regulator provides power for always-on PMIC functions such as register map and the RTC. The device provides autonomous backup battery switchover. A low-power LDO is included to support 'alive' processor power domains external to the WM8311.

A linear on-chip battery charger supports trickle charging and constant current/constant voltage charging of single-cell lithium-ion/lithium-polymer batteries. The charge current, termination voltage, and charger time-out are programmable. WM8311 detects and handles battery fault conditions with a minimum of system software involvement.

A 12-bit Auxiliary ADC supports a wide range of applications for internal as well as external analogue sampling, such as voltage detection and temperature measurement. The Touch Panel controller uses the same ADC on an interleaved basis.

WM8311 includes a crystal oscillator, an internal RC oscillator and Frequency Locked Loop (FLL) to generate all clock signals for autonomous system start-up and processor clocking. A Secure Real-Time Clock (S-RTC) and alarm function is included, capable of waking up the system from low-power modes. A watchdog function is provided to ensure system integrity.

To maximise battery life, highly-granular power management enables each function in the WM8311 subsystem to be independently powered down through a control interface or alternatively through register and OTP-configurable GPIOs. The device offers a standby power consumption of <10uA, making it particularly suitable for portable applications.

The WM8311 is supplied in a 8x8mm 121-ball BGA package, ideal for use in portable systems. The WM8311 forms part of the Wolfson series of audio and power management solutions.

FEATURES

Power Management

- 2 x DC-DC synchronous buck converter (0.6V - 1.8V, 1.2A, DVS)
- 1 x DC-DC synchronous buck converter (0.85V - 3.4V, 1A)
- 1 x DC-DC boost converter (up to 30V, up to 170mA)
- 1 x LDO regulator (0.9V - 3.3V, 300mA, 1Ω)
- 2 x LDO regulators (0.9V - 3.3V, 200mA, 1Ω)
- 2 x LDO regulators (0.9V - 3.3V, 100mA, 2Ω)
- 1 x Low-noise LDO regulators (1.0V - 3.5V, 200mA, 1Ω)
- 1 x 'alive' regulator (0.8V – 1.55V, up to 10mA)

Backlight LED Current Sinks

- 2 x programmable constant current sinks, suitable for multi-LED display backlight control

Battery Charger

- Programmable single-cell lithium-ion / lithium-polymer battery charger (1A max charge current)
- Battery monitoring for temperature and voltage
- Autonomous backup battery charging and switching

System Control

- I^2C or SPI compatible primary control interface
- Interrupt-based feedback communication scheme
- Watchdog timer and system reset control
- Autonomous power sequencing and fault detection
- Intelligent power path and power source selection
- OTP memory bootstrap configuration function

Additional Features

- Auxiliary ADC for multi-function analogue measurement
- Touch Panel interface controller (4-wire and 5-wire)
- 128-bit pseudo-random unique ID
- Secure Real-Time Clock with wake-up alarm
- 16 x configurable multi-function (GPIO) pins
- Comprehensive clocking scheme: low-power 32kHz RTC crystal oscillator, Frequency Locked Loop, GPIO clock output and 4MHz RC clock for power management
- System LED outputs indicating power state, battery charger or fault status
- Selectable USB current limiting up to 1.8A (in accordance with USB Battery Charging specification Rev 1.1)
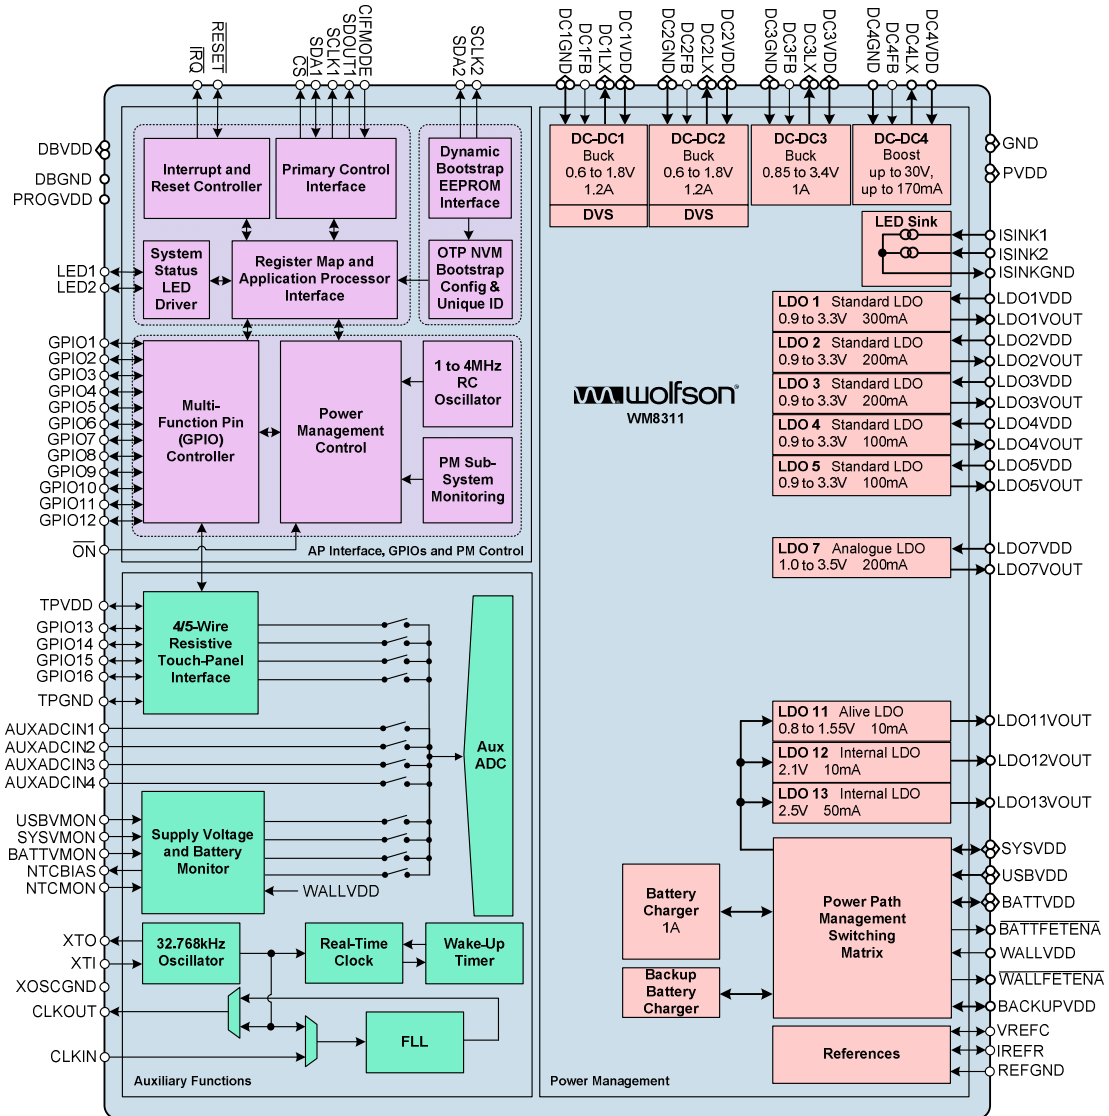

Package Options

- 8x8mm, 121-ball BGA package, 0.65mm ball pitch

APPLICATIONS

- Portable Media Players
- Portable Navigation Devices
- Cellular Handsets
- Electronic Books
- Electronic Gaming Devices

WOLFSON MICROELECTRONICS plc

BLOCK DIAGRAM

TYPICAL APPLICATIONS

The WM8311 is designed as a system PMIC device that manages multiple power supply paths (wall adapter, USB, battery) and generates configurable DC supplies to power processors and associated peripherals within a system. The WM8311 provides three step-down DC-DC converters and one step-up DC-DC converter. Seven LDO regulators provide a high degree of flexibility to provide power to multiple devices, with the capability to power-up and power-down different circuits independently.

Two of the DC-DC step-down converters are specifically designed to handle rapid changes in load current, as required by modern application processors; selectable operating modes allow the converters to be optimally configured for light, heavy or transient load conditions; they can also be tailored for minimum PCB area, maximum performance, or for maximum efficiency. The analogue LDOs provide low-noise outputs suitable for powering sensitive circuits such as RF / Wi-Fi / bluetooth radio applications.

The WM8311 powers up the converters and LDOs according to a programmable sequence. A configurable 'SLEEP' state is also available, providing support for an alternate configuration, typically for low-power/standby operation. The power control sequences and many other parameters can be stored in an integrated user-programmable OTP memory or may loaded from an external memory. The WM8311 supports autonomous programming and verification of the integrated OTP memory.

The WM8311 provides power path management which seamlessly switches between wall adapter, USB and battery power sources according to the prevailing conditions. A backup battery supply is also supported in order to maintain the Real Time Clock (RTC) in the absence of any other supplies. The WM8311 provides a battery charger for the main battery as well as the backup battery; these can be powered from either the wall adapter or USB supplies.

Programmable GPIO pins may be configured as hardware inputs for general use or for selecting different power management configurations. As outputs, the GPIOs can provide indications of the device status, or may be used as control signals for other power management circuits. The WM8311 also provides two LED drivers, which can be controlled manually or configured as status indicators for the OTP memory programmer, operating power state or battery charger.

ORDERING INFORMATION

ORDER CODE	TEMPERATURE RANGE (T_A)	PACKAGE	MOISTURE SENSITIVITY LEVEL	PEAK SOLDERING TEMPERATURE
WM8311GEB/V	-40°C to +85°C	121-ball (8 x 8mm) (Pb-free)	MSL3	260°C
WM8311GEB/RV	-40°C to +85°C	121-ball (8 x 8mm) (Pb-free, tape and reel)	MSL3	260°C

Note:

Reel quantity = 2200

PIN DESCRIPTION

Notes:

1. Pins are sorted by functional groups.

2. The power domain associated with each pin is noted; VPMIC is the domain powered by LDO12 for the 'always-on' functions internal to the WM8311.

PIN	NAME	TYPE	POWER DOMAIN	DESCRIPTION
Touch Panel and Auxiliary ADC				
F1, F2	USBVMON	Analogue Input	USBVDD	USBVDD Supply Voltage Monitor
G3	SYSVMON	Analogue Input	SYSVDD	SYSVDD Supply Voltage Monitor
G4	BATTVMON	Analogue Input	BATTVDD	BATTVDD Supply Voltage Monitor
K10	AUXADCIN1	Analogue Input/Output	SYSVDD	Auxiliary Analogue Input 1 / Battery Charge Current Monitor Output
K11	AUXADCIN2	Analogue Input		Auxiliary Analogue Input 2
L11	AUXADCIN3	Analogue Input		Auxiliary Analogue Input 3
H11	AUXADCIN4	Analogue Input	TPVDD	Auxiliary Analogue Input 4
F9	TPVDD	Supply		Touch panel VDD supply
G11	TPGND	Supply		Touch panel Power Ground
Clocking and Real Time Clock				
J9	XTO	Analogue Output	VPMIC	Crystal Drive Output
L9	XTI	Analogue Input		Crystal Drive Input or 32.768kHz CMOS Clock Input
K9	XOSCGND	Supply		Crystal Oscillator Ground
H3	CLKOUT	Digital Output	DBVDD2	CMOS Clock Output
J3	CLKIN	Digital Input		CMOS FLL Clock Input
General Purpose Input / Output				
C10	GPIO1	Digital I/O	DBVDD1 or VPMIC	GPIO Pin 1

B1	BATTFETENA	Digital Output	PVDD1	External Battery FET Driver
H4	WALLVDD	Supply		Wall VDD Supply/Sense
J4	WALLFETENA	Digital Output	highest VDD supply	External Wall FET Driver. Power domain is the highest out of WALLVDD, USBVDD or BATTVDD.
F3	NTCBIAS	Analogue Output	VPMIC	Battery NTC Temperature Monitor Supply
G5	NTCMON	Analogue Input		Battery NTC Temperature Monitor Voltage Sense Input
J10	BACKUPVDD	Supply		Secondary (Backup) Battery Supply
System LED Drivers				
F6	LED1	Digital Output	SYSVDD	Status LED Driver 1. Open Drain Output
F7	LED2	Digital Output		Status LED Driver 2. Open Drain Output

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings are stress ratings only. Permanent damage to the device may be caused by continuously operating at or beyond these limits. Device functional operating limits and guaranteed performance specifications are given under Electrical Characteristics at the test conditions specified.

ESD Sensitive Device. This device is manufactured on a CMOS process. It is therefore generically susceptible to damage from excessive static voltages. Proper ESD precautions must be taken during handling and storage of this device.

Wolfson tests its package types according to IPC/JEDEC J-STD-020B for Moisture Sensitivity to determine acceptable storage conditions prior to surface mount assembly. These levels are:

MSL1 = unlimited floor life at <30°C / 85% Relative Humidity. Not normally stored in moisture barrier bag.
MSL2 = out of bag storage for 1 year at <30°C / 60% Relative Humidity. Supplied in moisture barrier bag.
MSL3 = out of bag storage for 168 hours at <30°C / 60% Relative Humidity. Supplied in moisture barrier bag.

The WM8311 has been classified as MSL3.

CONDITION	MIN	MAX
OTP Programming Supply (PROGVDD)	-0.3V	7.0V
BATTVDD, WALLVDD and USBVDD supplies	-0.3V	7.0V
Input voltage for LDO regulators	-0.3V	7.0V
Input voltage for DC-DC converters	-0.3V	7.0V
Digital buffer supply (DBVDD1, DBVDD2)	-0.3V	4.5V
Voltage range for digital inputs	-0.3V	DBVDD + 0.3V
Operating Temperature Range, T_A	-40°C	+85°C
Junction Temperature, T_J	-40°C	+125°C
Thermal Impedance Junction to Ambient, θ_{JA}		45°C/W
Storage temperature prior to soldering	30°C max / 60% RH max	
Storage temperature after soldering	-65°C	+150°C
Soldering temperature (10 seconds)		+260°C
Note: These ratings assume that all ground pins are at 0V.		

RECOMMENDED OPERATING CONDITIONS

PARAMETER	SYMBOL	MIN	TYP	MAX	UNITS
Wall Input power source	WALLVDD	4.3		5.5	V
Battery Input power source	BATTVDD	2.7		5.5	V
USB Input power source	USBVDD	4.3		5.5	V
Backup Battery power source	BACKUPVDD			3.6	V
Digital buffer supply	DBVDD1, DBVDD2	1.71		3.6	V
Touch Panel supply (see note 1)	TPVDD	1.71	2.5	3.6	V
OTP Programming Supply (see note 2)	PROGVDD	6.25	6.5	6.75	V
Ground	GND, DBGND, TPGND, XOSCGND, REFGND		0		V

Notes:

1. When the Touch Panel Controller is enabled, then TPVDD must be connected to LDO13VOUT (2.5V). The min/max TPVDD conditions noted above do not apply when the Touch Panel Controller is enabled. (Note that, when the Touch Panel is not enabled, TPVDD is the power domain for GPIO pins 13-16.)

2. The OTP Programming Supply PROGVDD should only be present when programming the OTP. At other times, this pin should be left unconnected.
