\*Glove should be grounded to verify dissipation of static charges. Use Desco 09480 coil cord or equivalent to ground.

\*\*Glove Laundering  
For proper operation, the ESD Gloves must be laundered periodically. Woolite works well. Liquid detergents are better than dry in that there is less caking and frictional wear. Launder glove in cool or warm water, tumble dry with low heat or hang dry. Machine washing works well if using a standard house machine on gentle cycle. It is not recommended to launder these gloves in heavy industrial laundry machines as it will lead to premature wear. Gloves should be tumbled dry using low heat. DO NOT BLEACH. After laundering, verify (Rgp) <math>< 1 \times 10^7</math> ohms.
