

PDU-12WS-V-UK-IEC

12-Way  
UK socketed PDU  
with IEC input

Versatile and Assured Power Distribution

Data Enclosures

Switches & Servers

PABX & CCTV

A/V & Broadcast

Distributed, Assured Power for your Network

## Looking for a more specialised Power Distribution Unit (PDU) with high-density power output sockets?

The new LMS Data **PDU-12WS-V-UK-IEC** is a high-density, vertical placement PDU which features 12 standard UK power socket outlets to provide power to networking, data centre, PBX and broadcast level power devices within the data cabinet enclosure.

Setting this high-performance PDU apart is the inclusion of an industry standard IEC (IEC14) connector on the generous 1.8 metre (approx.) trailing mains input cable. Long enough for deployment in almost any scenario of data cabinet enclosure and as an added feature comes standard with mounting points for quick and easy fitment.

Coupled with a long-life, illuminated I/O Switch and a robust, aluminium-type enclosure means the PDU-12WS-V-UK-IEC is ideal for a whole host of professional applications, today and in the future.

## specifications:

12-way, UK plug-socket style Power Distribution Unit (PDU)

Compliant, 13-amp UK 3-pin socket output

Compliant, performance IEC (IEC14) plug input

Illumination On/Off power-input rocker switch

Generous length, 1.8 metre (approx.) power cable

Lightweight design with a 1U high form-factor design

Ideal for vertical placement in data or server enclosures

Ideal for LAN, audio-visual, PBX, VoIP and CCTV applications
