Mi|Home™

your switch is mi command

Gateway

Mi|Home Gateway

The Gateway device provides a central hub in a domestic or small commercial environment for a range of smart home related products. These include plug adapters for remote control, power monitoring, wall sockets and lights switches, radiator valves for heating control and whole house monitor.

The Gateway is able to store timers locally and therefore if there is a connectivity issue the Gateway will still control the Mi|Home system. This is a very important safety feature.

Technical information:
• Product code: MIHO001
• Input voltage: 5VDC
• Input current: 150mA max
• Power connection: MicroUSB
• Ethernet connection: RJ45
• Standby power: 0.3W
• Transmission Frequency: 434.300 MHz

Box Contents
• Mi|Home Gateway
• Ethernet Cable
• 500mA MicroUSB Power Supply
• Quick Start Guide
