3. CONNECTOR

REV	DESCRIPTION	DATE		
т	ADD IN CATALOGUE NO. 'VAC14LA'.			
U	ADD IN CATALOGUE NO. 'VNC14S' .	27/05/15		

3.1. SCOPE

The connector shall be in accordance with IEC 60320-2-2 / EN 60320-2-2 & IEC 60320-1 / EN 60320-1: Test specification - appliance couplers.

3.2. CONSTRUCTION

The connector construction shall comply with our catalogue No: VAC14S, VAC14A, VAC20S, VAC14LS, VAC14KC, VAC14KAL, VAC14KAR, VAC14LA, VNC14S, VAC20KAL, VAC20KAR & VAC20KC.

"All Connectors complying to Standard Sheet C14 and C20"

3.3. CHARACTERISTICS

NO.	TEST ITEM	DESCRIPTION	ACCEPTANCE CRITERIA
1.	Moisture resistance test	Samples are kept in a humidity cabinet containing air with a relative humidity between 91 to 95% and a temperature of 20°C-30°C for a duration of 48 hours.	No damage
2.	Electric strength test	Voltages of 3000V±60V and 1500V±60V, with min. trip current of 100mA is applied for 60s±5s between current-carrying contacts and body and between each contacts respectively after the moisture resistance tests.	No flashover and breakdown
3.	Insulation resistance test	This test is measured with a D.C 500V after the moisture resistance test. Readings are taken after $60s \pm 5s$ of application of voltage.	Min. 5 M Ohm
4.	Glow wire test	Glow wire is applied for 30s with temperature of 750°C on inserts and housings retaining contacts and 650°C on elsewhere.	Flame (if any) shall be self- extinguished within 30s. upon the removal of the glow wire and molten droplets shall not ignite paper.

			Information contained herein shall not be disclosed to others, reproduced or used for any other purposes except as authorized in writing by an authorized official of volex asia.

NO.	TEST ITEM	DESCRIPTION	ACCEPTANCE CRITERIA
5.	Bending test	The sample shall be loaded with a weight of 10N for 0.75mm ² or 20N for 1.00mm ² or bigger and the oscillating member shall be moved backward and forward through an angle of 90°(45° on either side of the vertical) the number of flexing being 20,000. A rated current is applied. For round cord, the sample is turned 90 degree around the axis of cable after 10,000 cycles. The flexing is further completed in this axis. Flat cable is flexed only along the bigger axis of	There shall be no complete breakage of any of the conductor. Broken conductor shall not have pierced the insulation.
6.	Tumbling test	The sample is dropped from a height of 50cm onto a steel plate(3mm thick) for a total of 500 times.	No damage to impair further use of connector.
7.			The temperature rise shall not exceed 45K.
8.	Cord-anchorage test	The cord is subjected to pulls of 50N(2.5A) or 60N(others) for 100 times each time for 1 sec. without jerk. Thereafter the cord is subjected for 1 min. to a torque of 0.15Nm(0.75mm ²) or 0.25Nm(others).	The cord shall not be damaged and shall not been displaced by more than 2mm.
9.	Heat deformation test	Samples are kept for 1 hour in a heating cabinet at temperature of 100±2°C.	No damage to impair further use of connector.
10.	Heat pressure test	A pressure of 20N is applied at a temperature of $100^{\circ}\text{C} \pm 2^{\circ}\text{C}$ for 1 hour.	No damage to impair further use of connector.
11.	Aging The samples are kept for 168 hours in a heating test cabinet at a temperature of 80±2°C.		No damage & marking shall be legible.
12.	Ball pressure test	A ball of 5mm in diameter is applied on the connector with the following temperature with 20N force for 1 hour. i) 125°C for hot connectors. ii) 125°C for parts retaining current carrying parts and earth circuit. iii) 75°C for other parts for cold connector. The connector is then cooled down to room temperature with cold water.	The diameter of the impression shall not exceed 2mm.
