Description

USB1T20 is a generic USB 2.0 compliant transceiver. Using a single voltage supply, the USB1T20 provides an ideal USB interface solution for any electronic device able to supply 3.0 V to 3.6 V. It is designed to allow 5.0 V or 3.3 V programmable and standard logic to interface with the physical layer of the Universal Serial Bus (USB). It is capable of transmitting and receiving serial data at both full speed (12Mbit/s) and low speed (1.5Mbit/s) data rates.

Packaged in industry-standard TSSOP package. The USB1T20 is ideal for mobile electronics and other space-constrained applications.

Pin Definitions

Pin #	Name	I/O	Description			
1	MODE	I	Mode. When left unconnected, a weak pull-up transistor pulls mode pin to V_{CC} and, in this GND, the V_{MO}/F_{SEO} pin takes the function of F_{SEO} (force SEO).			
2	/OE	I	Output Enable. Active LOW; enables the transceiver to transmit data on the bus. When not active, the transceiver is in receive mode.			
3	RCV	O	Receive Data. CMOS-Level output for USB differential input.			
4, 5	V_P, V_M	O	Gated version of D- and D+. Outputs are logic "0" and logic "1." Used to detect single ended zero (/SEO), error conditions, and interconnected speed. (Input to SIE).			
			V_P	V_M	RESULT	
			0	0	/SEO	
			0	1	Low Speed	
			1	0	Full Speed	
6	SUSPND	I	Suspend. Enables a low-power state while the USB bus is inactive. While the suspend pin is active, it drives the RCV pin to a logic "0" state. Both D+ and D- are 3-state.			
7	GND		Ground reference.			
8	NC		No connect.			
9	SPEED	I	Edge Rate Control. Logic "1" operates at edge rates for full speed. Logic "0" operates edge rates for low speed.			
10, 11	D-, D+	AI/O	Data+, Data-. Differential data bus conforming to the Universal Serial Bus standard.			
12, 13	$V_{PO}, V_{MO}/F_{SEO}$	I	Inputs to differential driver. (Outputs from SIE.)			
			Mode	V_{PO}	V_{MO}/F_{SEO}	RESULT
			0	0	0	Logic "0"
				0	1	/SEO
				1	0	Logic "1"
				1	1	/SEO

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
