

Dual I²C Power Supply Monitor and Margining Controller with LTC3828 Dual DC/DC Supply

DESCRIPTION

The DC980A and DC980B are a demonstration system that showcases the [LTC2970](#), a dual I²C power supply monitor and margining controller. The DC980A board contains the LTC2970 device and the DC980B board contains the [LTC3828](#) dual DC/DC controller. The two boards interface to each other via a 20-pin connector. The DC980B board features the LTC3828 dual output, 2-phase synchronous buck regulator. The LTC2970's two voltage-buffered, 8-bit IDACs allow highly accurate margining of the LTC3828's output voltages. The IDACs can be configured to automatically servo the power supplies to a desired voltage using the ADC for feedback. The DC980B comes preconfigured with 3.3V and 5V power supply rail voltages.

The LTC2970's low drift reference and 14-bit ΔΣ A/D converter allow precise measurements of two power supply output voltages and load currents. Fault management allows ALERT# to be asserted for configurable over- and undervoltage fault conditions.

This demonstration system is supported by the LTpowerPlay™ graphical user interface (GUI) which enables complete control of all the features of the device. Together, the LTpowerPlay software and DC980A/DC980B hardware

system create a powerful development environment for designing and testing hardware configurations for the LTC2970. The software displays the LTC2970 features and provides real time measurements from the device's ADC and status registers. Telemetry also allows easy access of the fault status created by the LTC2970.

The LTC2970 features may be evaluated with the LTC3828 based power supplies, or alternatively the DC980B board may be removed and DC980A can then be connected to an external power supply circuit.

The DC980A/DC980B demo boards are powered by an external 7V to 21V power supply. Communication with the software is provided through the DC590 USB-to-I²C controller. The following is a checklist of items which can be obtained from the LTC website or LTC field sales.

- USB-to-I²C/Serial Controller (DC590)
- LTpowerPlay Software

Design files for this circuit board are available at
<http://www.linear.com/demo/DC980A/DC980B>

PERFORMANCE SUMMARY

Specifications are at T_A = 25°C

PARAMETER	CONDITIONS	VALUE
12V _{IN} Supply Input Voltage Range		8V to 15V
V _{DD} Supply Input Voltage Range		4.5V to 5.75V
ADC Full-Scale Accuracy		±0.4%
ADC Total Unadjusted Error	V _{IN} = 3V	±0.5%
ADC Input Range		0V to 6V
ADC Resolution	Resolution = 8.192V/16384	500mV/LSB
ADC Conversion Rate		30Hz
Margining DAC Resolution		8-Bits
Temperature Sensor Resolution		0.25°C/LSB
I ² C Serial Clock Frequency		10kHz to 400kHz

DEMO MANUAL

DC980A/DC980B

DC980A/DC980B FEATURES

- Monitors and Margins Two Power Supplies
 - Two Output Voltage Monitors
 - Two Input Voltage Monitors
 - Two Output Current Monitors
 - Telemetry Reads Back V_{IN} , V_{OUT} , I_{OUT} , Temperature
 - Supported by LTpowerPlay GUI
 - I²C Adjustable OV/UV Trip Points
 - Margin or Trim Supplies to $\pm 0.5\%$ Accuracy
 - I²C/SMBus Serial Interface
 - Programmable GPIO for Fault Reporting
 - Powered from External Power Supply
 - LTC2970 Available in 16-Lead DFN and SSOP Packages
-

GLOSSARY OF TERMS

The following list contain terms used throughout the document.

Channel: The collection of functions that monitor, supervise, and trim a given power supply rail.

Margin: Term used typically in board level testing that increases/decreases the output voltage to look for sensitivity/marginality problems.

Monitor: The act of measuring voltage, current, and temperature readings.

Rail: The final output voltage that the power supply controller manages.

Supervise: The act of quickly responding (warning or faulting) to a voltage, current, or temperature condition that is compared to preprogrammed values.

Trim: The act of adjusting the final output voltage. A servo loop is typically used to trim the voltage.

LTpowerPlay GUI SOFTWARE

LTpowerPlay is a powerful Windows-based tool that supports Linear Technology products, including the LTC2970 dual power supply monitor and margining controller. You can use LTpowerPlay to evaluate Linear Technology ICs by connecting to a demo board system. LTpowerPlay utilizes the DC590 USB I²C/serial controller to communicate with one of many potential targets, including the DC980A/B demo system or a customer board. The software also

provides an automatic update feature to keep the software current with the latest set of device drivers and documentation. The LTpowerPlay software can be downloaded from:

<http://www.linear.com/ltpowerplay>

To access technical support documents for LTC Power System Management Products visit Help, View Online help on the LTpowerPlay menu.

DEMO MANUAL

DC980A/DC980B

QUICK START PROCEDURE

The following procedure describes how to set up a DC980A, DC980B, and DC590 for demonstration purposes or to evaluate the performance of the LTC2970.

1. Download and install the LTpowerPlay: <http://www.linear.com/ltpowerplay>
 2. The default locations of DC980A's configuration jumpers are as follows:

JP1 ASEL0	JP2 ASEL1	JP3 GRI0_CFG	JP4 WRITE- PROTECT	JP5 DAC1 TERMINATION	JP6 DAC0 TERMINATION	JP7 VDD SOURCE
LO	LO	GND	ON	IOUT0	IOUT1	LOCAL

3. The default locations of DC980B's configuration jumpers are as follows:

JP1 PHSMID	JP2 FSET	JP3 FCB	JP4 RUN1	JP5 RUN2	JP6 TRACK2	JP7 TRACK1
0	550kHz	CCM	ON	ON	EXT1	VOUT1

4. Connect the DC980A and DC980B boards using the 20-pin analog interface edge connector. Connect DC980A to the DC590A USB I²C/serial controller using the supplied 14-conductor ribbon cable.
 5. Connect a power supply (8V to 15V) to the DC980B's VIN and GND turrets. You may jumper the DC980B's VIN to the 12VIN turret of the DC980A. Refer to Figure 2 for the connections.

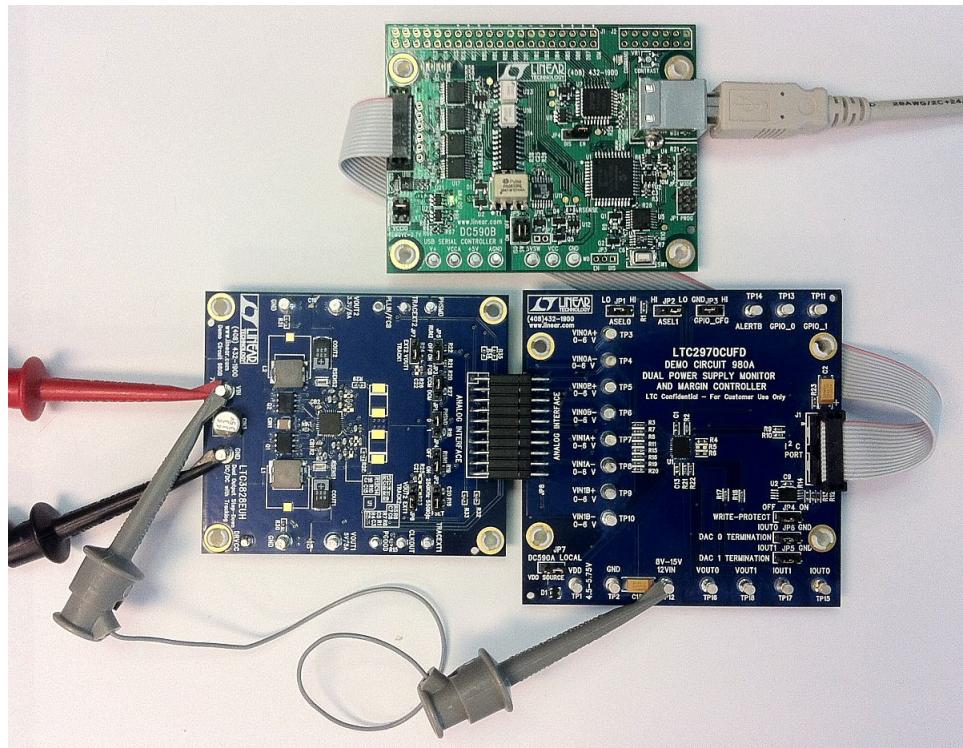

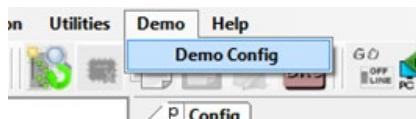

Figure 2. Connecting DC980A/DC980B Boards and the DC590 I²C/Serial Controller

QUICK START PROCEDURE

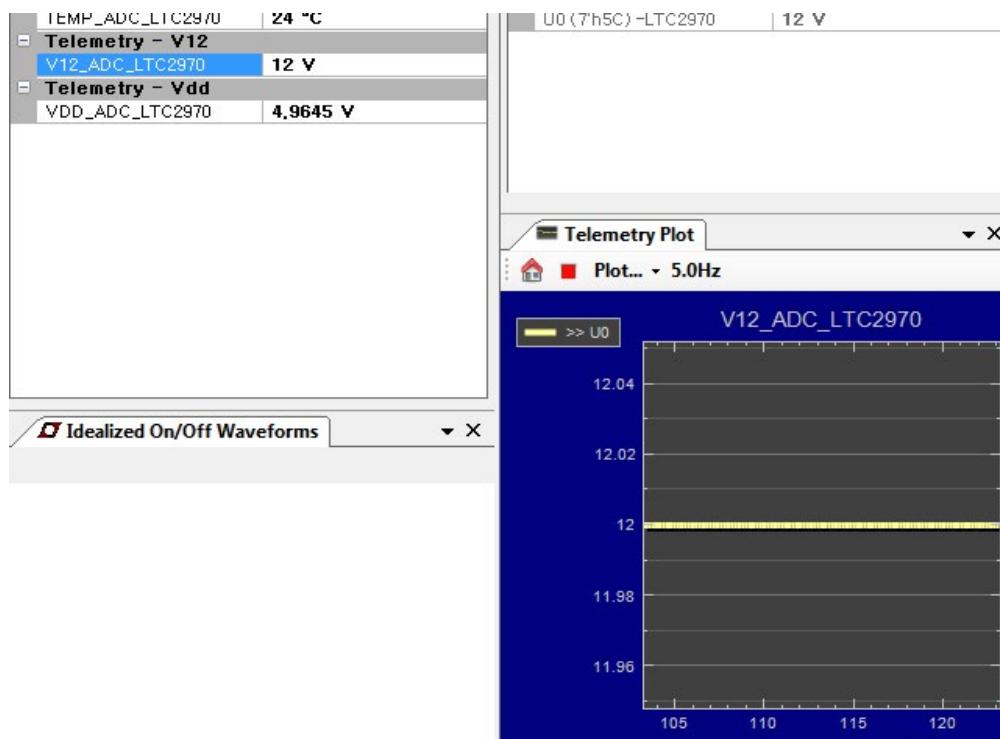

6. Apply input power to the VIN turret of the DC980B companion board. *NOTE: Make sure that the input voltage does not exceed 15V. Be sure JP7 is set to LOCAL.*
7. Connect the USB cable from the host computer to the DC590A. Launch LTpowerPlay. The software automatically identifies the DC980A and builds a system tree for the LTC2970. The GUI should appear as that shown in Figure 1.
 - a. Load default configuration into the LTC2970. From the pull-down menu select Demo > Demo Config.

- b. Check for the LTC3828 output voltages.

Telemetry - Ch0	
CH0_A_ADC_LTC2970	4.983 V
CH0_B_ADC_LTC2970	0 V
CH0_A_IDAC_READ_LT...	0x0883
Telemetry - Ch1	
CH1_A_ADC_LTC2970	3.311 V
CH1_B_ADC_LTC2970	0 V
CH1_A_IDAC_READ_LT...	0x0882

- c. Check VDD and V12 input voltages.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No license is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
