Premium Grade OFC Connectivity with Enhanced Performance

Looking to replace your regular Apple(tm) 30-Pin to USB cable, with a higher quality connectivity solution?

The new **C-USB-IP-TH** from LMS Data is a new breed of higher performance charge and sync USB cables that not only offer superior performance* but also benefit from a longer in-use lifespan, coupled with the look of a more stylish cabling product.

Unlike your regular 30-Pin legacy Apple(tm) connector, the C-USB-IP-TH utilises an overall larger diameter (OD) core size which produces unique benefits not found on your regular charge and sync cables.

Firstly, by using a large OD means that data transfer to and from your Apple(tm) device is greater than before and would normally work at the maximum throughput of the Apple(tm) device.

Secondly, overall charging of your Apple(tm) device such as iPhone(tm) or iPad(tm) for example will generally be reduced in time*, owing to the larger current being able to be transferred over the cable.

Coupled with a robust design, with an extended lifespan in normal use, the C-USB-IP-TH is the ideal next generation charge and sync cable for your legacy 30-Pin Apple(tm) devices.

specifications:

Premium Grade USB to original 30-Pin Charge & Sync Cable

Overall improvements in data sync and charge performance*

Oxygen-Free (OFC) cabling with larger core diameters

Quality assured cabling construction (Cable OD 4.8mm)

Standard 30-Pin iPhone4(tm) interface, USB2.0 interface

Generous 1.5 metre (approx) cable length

Retail Packaging
