**The new generation of miniature circuit breakers.
System pro M compact S200 series.**

The new S200 series covers all your circuit breaker needs up to 63 amps. We have redesigned our popular supplementary protectors and have now introduced a brand new range of miniature molded case circuit breakers suitable for use as branch circuit protection according to UL 489/CSA C22.2 No.5.0.

Alongside the redesigned S200 supplementary protectors, the new S200 U and S200 UP miniature MCCBs offer the familiar ABB advantages; small size, excellent protection and easy installation.

S200 U and UP series are UL 489, CSA C22.2 No 5 approved as well as IEC 947. For the first time one circuit breaker fulfills North American and global approval requirements. Global circuit breakers for OEMs building global equipment.

By building on the proven technology of our supplementary protectors and introducing the new range of miniature MCCBs, ABB now offer a full solution of the highest quality that fits into the minimum space. This allows you to better meet the wishes of your customers by offering even more compact global solutions.

The new S200 series is the first truly compact and modular full circuit breaker solution for use in both North American and global markets.

General information

General information

Miniature circuit breakers (MCBs) are used throughout the world in all types of electrical installations. ABB MCBs are recognized by UL and CSA as supplementary circuit protectors in systems rated 240VAC and 480VAC.

MCBs are approved per IEC-898 and VDE 0641, and certified under IEC-947 and VDE 0660 standards for use in systems rated 415VAC.

MCBs can be applied to 16 2/3Hz – 400Hz and DC power systems. Continuous current ratings are as low as 0.2 amperes and up to 63 amperes maximum.

MCBs are of compact size and can be quickly mounted on standard 35mm DIN rail or can be front mounted by use of a front mounting kit.

MCBs include line and load side terminals for conductors from 18 through 4AWG (0.75 – 25mm²).

MCBs can also be connected via busbar conductors which can be either upper or lower mounted for top feed or bottom feed. Dual function terminals allow busbars to be connected with main incoming line conductors without separate lugs.

Accessories

Auxiliary devices can be added to S200 series MCBs:

- Shunt trips
- Auxiliary contacts
- Trip contacts
- Aux/trip contacts
- Undervoltage release

Accessory device modules can be field mounted to all above listed ABB MCBs.

Applications

MCBs can be used for equipment protection, in commercial appliances, protection of control circuits against overcurrent faults, computer equipment and other computer peripheral devices.

UL 489 / CSA C22.2 N° 5.0

S200U and S200UP MCBs are listed as molded case circuit breakers for use as branch circuit devices. MCCBs and accessories are listed under UL file E212323 and CSA file LR98793 certificate 1546332.

UL 1077 / CSA C22.2 N° 235

S200 and S200P MCBs are recognized as supplementary protectors and are intended for use as overcurrent protection within an appliance or other electrical equipment where branch circuit overcurrent protection is already provided or not required. MCBs and accessories are recognized under UL File E76126 and CSA file LR98793 certificates 1530107 and 1546299.

Tripping characteristics

Time-current curves

ABB miniature circuit breakers are available with different trip characteristics, allowing for maximum system protection.

B characteristic

Available with the S200 series has rated currents of 6 through 63 amperes in 10 steps. The "B" time-current curve is designed primarily for use in cable protection applications. Instantaneous tripping occurs between approximately 3 to 5 times rated current in 50/60Hz systems. This quick trip curve maximizes protection of control circuits under low short circuit fault levels that could damage control wiring.

C characteristic

Available in the S200 series with rated currents up through 63 amperes. The "C" time-current curve is designed for medium magnetic start-up currents. Instantaneous tripping occurs between 5 and 10 times rated current in 50/60 Hz systems. The "C" characteristic is also available in other S2 series MCBs.

D characteristic

The new magnetic trip action has an instantaneous trip point of approximately 15 times the breaker rating. Thus, the S200-D can be a good protective solution for applications involving high in-rush transformers, motors and other high inductive systems. The 200-D is also suitable for any application where a high instantaneous trip point is desired. Available in the S200 series.

K characteristic

The "K" time-current characteristic considers high magnetic start-up currents from motors, transformers and other equipment. Instantaneous tripping occurs between 8 and 12 times rated current in 50/60Hz systems. The "K" characteristic is available up through 63 amperes.

The "K" curve offers the best protection for the broadest range of electrical systems. The higher magnetic trip settings maximizes protection while allowing for higher in-rush currents during system start-up. Available in the S200, S200U and S200UP. series.

Z characteristic

Also available up through 63 amperes, the "Z" characteristic offers instantaneous tripping between 2 and 3 times rated current in 50/60Hz systems.

Many applications require a very low short circuit trip settings in order to protect semiconductor or other sensitive devices and the "Z" trip characteristic may provide maximum protection and service in these applications. Available in S200, S200U and S200UP.

S200, S200U and S200UP

S2C-H6R

S2C-H10

S2C-A1

S2C-UA12DC

S2C-H6RU

Electrical accessories	For use on:	Catalog number	List price	Delivery class	Sugg. order qty	Wgt. kg (1 pc.)
------------------------	-------------	----------------	------------	----------------	-----------------	-----------------

Auxiliary contacts

For field mounting right side: 1 form "C" contact	S200 S200U & S200UP	S2C-H6R		A	1	0.04
For field mounting below: 1 N.O. 1 N.C.	S200 S200	S2C-H10 S2C-H01		A	15	0.02

The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Wire size: 18 AWG to 14 AWG.

Bell alarm or auxiliary contacts (universal)

For field mounting right side: 1 form "C" contact	S200 S200U & S200UP	S2C-S/H6R S2C-S6RU		A	1	0.04
--	---------------------------	-----------------------	--	---	---	------

The bell alarm includes a set of contacts that will only signal when the breaker has tripped. Typically the contacts would be connected to an alarm or bell to signal the operator that an overcurrent trip has occurred. The bell alarm also includes a test button for testing the alarm contacts without opening the breaker. Wire size: 18 AWG to 16 AWG.

Shunt Trip

For field mounting right side: A1-12-60VAC (12-60VDC) A2-110-415VAC (110-250VDC)	S200 S200U & S200UP	S2C-A1 S2C-A2 S2C-A1U S2C-A2U		A	1	0.150
--	---------------------------	--	--	---	---	-------

For remote tripping of breaker, a shunt trip device can be added to the MCB. The solenoid device opens the breaker after control voltage is applied. Shunt trips are available for on control system voltage (12-415VAC-VDC).

Undervoltage release

For field mounting: 12VDC 24VAC 24VDC 48VAC 48VDC 110VAC 110VDC 230VAC 230VDC 400VAC	S200	S2C-UA12DC S2C-UA24AC S2C-UA24DC S2C-UA48AC S2C-UA48DC S2C-UA110AC S2C-UA110DC S2C-UA230AC S2C-UA230DC S2C-UA400AC		B	1	0.09
--	------	---	--	---	---	------

When control voltage drops below approximately 50% of rated voltage, the UVR opens the breaker. The breaker can not be operated unless proper control voltage is first applied to the UVR coil. Similar in size and mounting to the shunt trip accessory.

Factory mounting

All accessories can be easily mounted in the field. For factory mounting of any accessory devices, add \$50 list to total price per breaker. To create complete catalog number, take suffix of accessory device following «S2C-» and add suffix to end of breaker part number. Multiple suffixes must be added in alphabetical order.

Example: S202-K20A1 \$ 240 (2 pole, 20A breaker with type A1 shunt trip) S202-K20 @ \$82 + S2C-A1
 S202-K20A2H6R \$ 268 (2 pole, 20A breaker with type A2 shunt trip and H6R aux. contacts)
 S202-K20 @ \$82 + S2C-A1 @ \$108 + S2C-H6R @ \$28 + factory mounting @ \$50 = \$260

Auxiliary contacts and shunt trips may be mounted in combination.

Influence of frequency on electro-magnetic trips

Magnetic trip values shown on trip curves are valid for 50/60Hz applications. For frequencies other than 50/60Hz, the magnetic (instantaneous) trip values are increased by the factor given below.

	16-2/3 to 60Hz	100Hz	200Hz	400Hz	DC
Approx. factor	1	1.1	1.2	1.5	1.5

Thermal tripping is independent of frequency.

Busbars & connectors

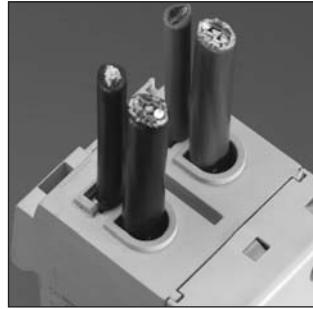

Connection methods

Dual function terminals provided in open position for connection to busbars or cable.

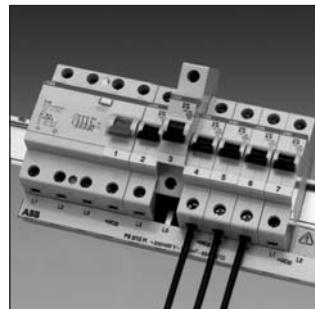

Terminals allow for connection of cable 18-4 AWG.

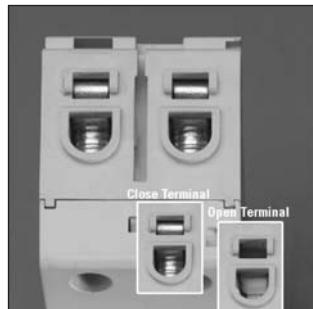

Two slots per terminal offer the ability to connect, independently, two conductors.

Top and bottom terminals can be bussed together with single phase or multi-phase busbars as shown. Both line and load side terminals can be busbar connected.

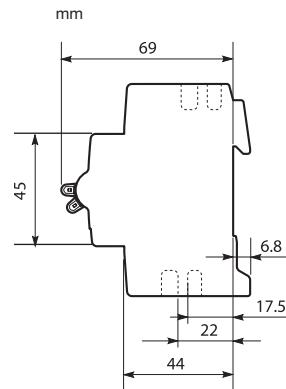

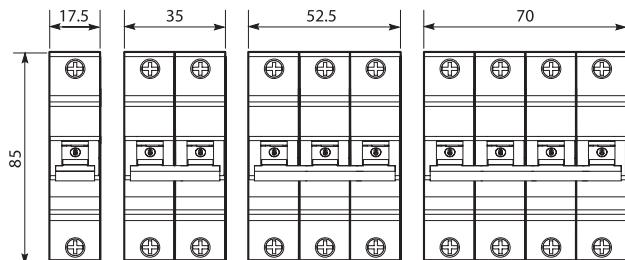

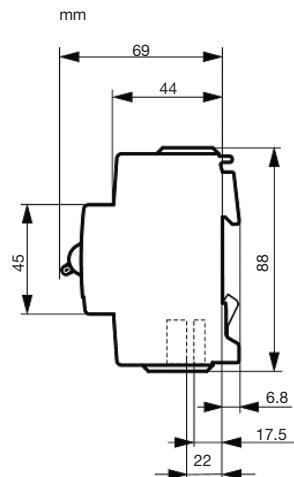

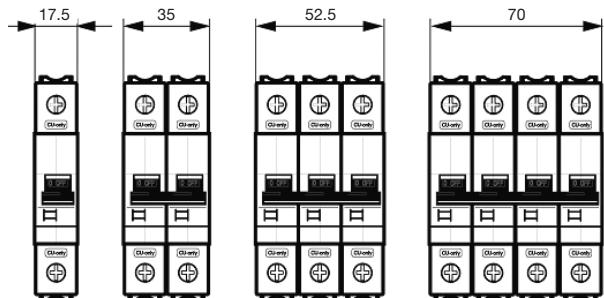

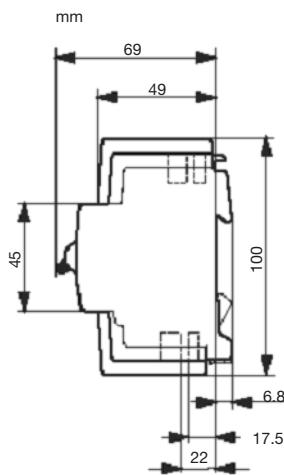

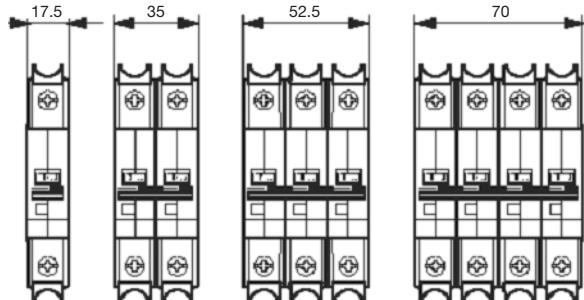

Easy removal of devices from an assembly when using busbar in the bottom, load side terminals. Supplementary protectors only.

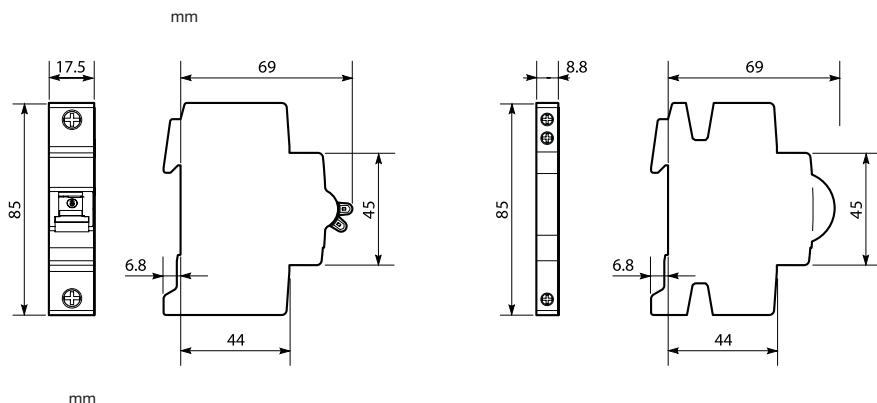

Conductors can only be inserted into open terminals, preventing mis-wiring and potential problems.

Many older styles of ABB miniature circuit breakers have been replaced by new and improved versions. Many of these newer styles can be directly interchanged, both electrically and physically, with the older version. There are also many international styles of ABB circuit breakers which are not normal stock items and may be interchanged with stocked ABB versions.

Description

The S2 series of miniature circuit breakers offer a compact solution to protection requirements. **The breakers are recognized under standard UL 1077 and CSA C22.2 N° 235 as supplemental devices.** The S2 devices are current limiting, DIN rail mounted and can offer a good equivalent to fused systems.

The S2 is available with application-specific trip characteristics to provide maximum circuit protection. The breakers offer thermal-magnetic trip protection according to K and Z characteristics.

For the worldwide market, the breakers carry UL, CSA, IEC, CE and many other agency approvals and certifications.

Features

- Current limiting
- Fast breaking time (2.5 – 3.5 msec)
- Unique bus connection system
- Wide range of accessories
- Available with variable depth handle mechanism
- Optional Z curve for SCR protection
- CE certified and marked
- DIN rail or front plated mounting
- Finger safe terminals
- Multi-function terminals
- Suitable for reverse feed
- UL 1077 and CSA C22.2 N° 235
- 480Y/277VAC, 600Y/347VAC and 500VDC versions

Direct current applications

The S280UC differs from standard miniature circuit breakers in that the UC versions include a permanent magnet which aids in the extinguishing of the arc during medium and high level faults. It is necessary to observe the correct polarity and current direction when connecting the UC breakers. Two examples of correct connection are shown below.

Termination points are marked on all UC type MCBs, points one (1) and four (4) are negative and points two (2) and three (3) are positive. Four pole breakers are also available for voltage reversal applications.

Technical data

Mounting and operating instructions

Mounting

Universal mounting position using snap-on mounting to standard 35x7.5mm DIN rail.

Miniature circuit breakers (MCBs) can also be mounted to front of door using a panel cut-out with breaker handle protruding through panel opening for external operation. Special front mounting kit type ME is available (see page 2.12).

Connection

Terminals are suitable for solid or flexible conductors from 18 to 4 AWG (0.75 to 25mm²) with no busbar connected. When maximum busbar size of 36 mm² is used, maximum cable is 6 AWG (16 mm²).

Maximum tightening torque of 17.5 in-lb (2 Nm) for line/load terminals and 4.5 in-lb (0.5Nm) for accessory device terminals.

Operation

MCBs are switched on by moving the handle to the upper position. Stamped onto the handle switch, a "I" is visible confirming that the breaker is closed.

The MCBS are "trip-free," if the handle is being forced to the "ON" position, the breaker will still trip under fault conditions.

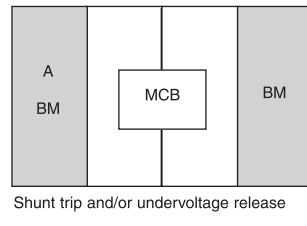

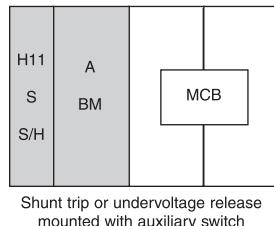

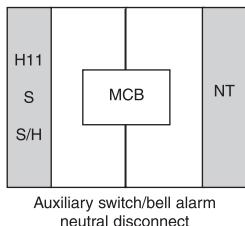

The "O" marking indicates that the breaker is in the "OFF" position. The MCB is now open and the load is disconnected from line power.

When a breaker has tripped, the MCB handle should first be set to the full "OFF" position to make certain the trip mechanism has been reset. Once the fault has been determined and cleared the MCB can again be switched "ON".

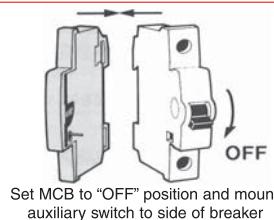

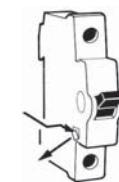

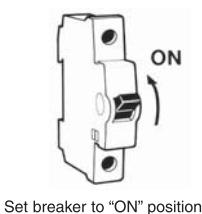

Maintenance

ABB miniature circuit breakers require no special maintenance; only normal electrical system maintenance procedures are required.

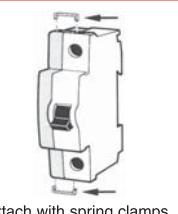

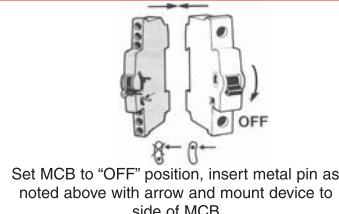

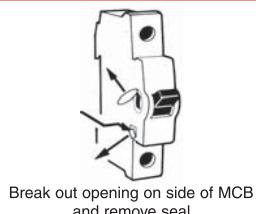

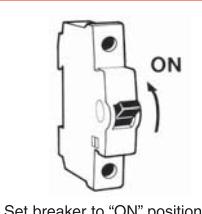

Possible mounting arrangements of MCB accessories

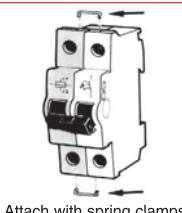

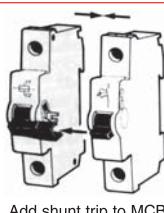

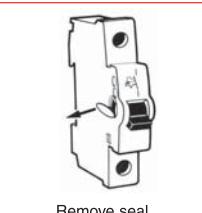

Auxiliary switch

Bell alarm with auxiliary contact

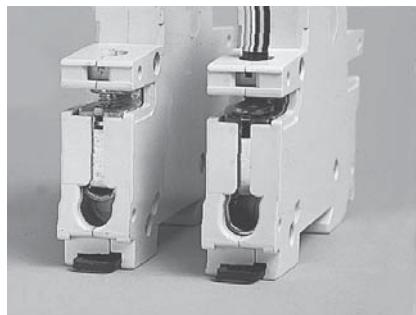

Shunt trip and undervoltage release

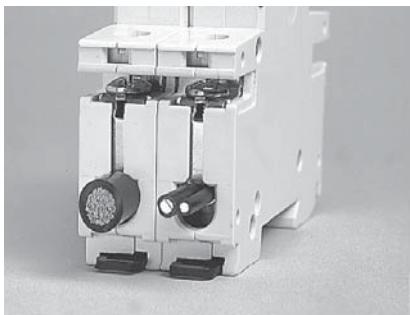

Technical data

Busbars & connectors

Connection methods

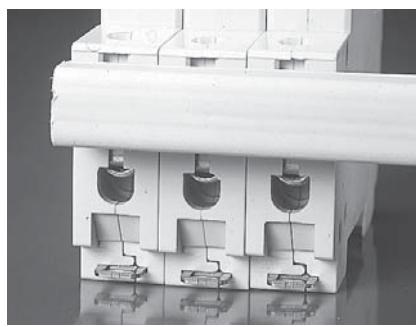

Dual function terminals provided in open position for connection to busbars. Pressing on screw head opens box terminal for cable insertion. Only the lower terminal is dual function.

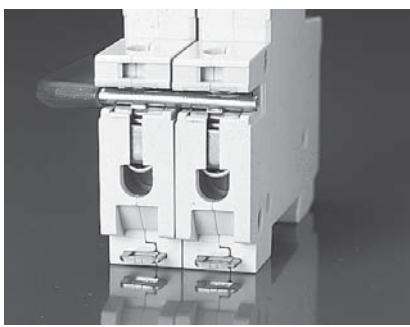

Terminals allow for connection of cable 18-4 AWG. Conductors of different sizes may also be used in same terminal.

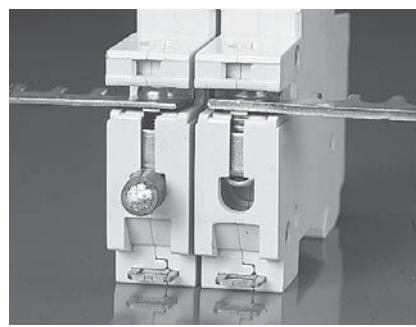

Up to five conductors, 16 AWG each, can be safely connected per terminal.

Lower terminals can be bussed together with single phase or multi-phase busbars as shown. Upper terminals can also be busbar connected.

Lower terminal can also be bussed with solid round conductor.

Cables can be connected to box terminals in addition to busbar connections on lower, dual function terminals.

**Description**

Increasing energy requirements result in larger short-circuit currents which place heavy demands on protective switchgear regarding safety, reliability and switching capacities.

The S500 heavy-duty circuit breaker fulfills these requirements by virtue of its technical features. It is equipped with a thermal and/or electromagnetic release to protect circuits, motors, switchgear and systems from the effects of overload and short-circuit currents.

For the worldwide market, the S500 breakers carry UL, CSA, IEC, CE and many other agency approvals.

Features

- High breaking capacity
- Energy-limiting
- Current-limiting
- Extremely fast breaking time
- Optimal selectivity
- Various versions for special applications
- Compact dimensions, DIN cap size
- Easy and quick to install
- Easy to connect; finger safe terminals
- Wide range of accessories
- UL 1077 recognized 600VAC and 500VDC versions

Residual current devices

F200 series

Description

RCDs provide ground fault equipment protection by monitoring the leakage of current to ground. The F200 series will trip when ground faults are detected in excess of the GF trip rating of the device. These devices provide GF protection only and are used in series with standard MCBs which provide overload and short circuit protection. The F200 series can be used as a main device providing GF protection for several MCB branch devices.

The F200 series is cURus recognized according to UL 1053 and to CSA C22.2 no.144.

The F202 is for use in single phase/two wire or two pole systems. The F204 is for use in three phase/four wire systems.

The F200 series RCDs replaces the F360 series with no change in form, fit or function.

The F200 have a profile similar to the S2 MCBs and can be used with the MCB bus-bars.

① For use on 3p/3w systems, add jumper between 4 and 8N for operation of test button.

NOTES

**Description**

- Safe connection by box terminals
- Captive screws with Pozidrive slotted head, Pozidrive system, Gr. 1
- Snap-on labels available
- Quick mounting with snap-on clip, easily accessible and detachable at the bottom
- Protection against unintentional direct touch
- System approach for control and circuit protection
- Compact size that dimensionally matches the S2 MCB series
- Control and pilot functions can be along side protective devices
- DIN rail mounted with 45mm front opening
- For use in auxiliary and logic devices
- Provide additional user functions for system control and operation
- Include pushbuttons, indicating lights and selector switches
- ABB System pro M compatibility
- Most devices are UL 508 and CSA C22.2 N° 14 recognized and are IEC compliant
- Labeled with the CE Mark

Isolator switches

The E201 series operate as disconnect switches and are typically used as a main disconnect for several branch MCB devices. The isolator switches offer no overcurrent protection. The E201 series is the same physical size and shape as the S260, S270 & S280 series. The switches include dual function terminals and can be connected via standard ABB busbar through the upper or lower terminals.
