Harmonica/Stacked Jacks

Company Profile

A NASDAQ company (BELFA & BELFB), Bel was founded in 1949 and is headquartered in Jersey City, New Jersey. Bel helps make global connectivity a reality by manufacturing electronic components for the computer, networking and telecommunication industries. Partnered with the leaders in these markets, we develop new products for emerging technologies that enable high speed communication. Our expanding portfolio includes a range of complementary products from circuit protection devices to power conversion modules, transformers and connector modules, to integrated line interface products.

For over sixty years, we've used our superior, high-volume manufacturing techniques to deliver quality products to the global marketplace. Bel employs more than 10,000 people around the world with facilities in North America, Asia and Europe.

Stewart Connector portfolio of products include one of the broadest ranges of Ethernet connectivity. Our interconnect products includes passive jacks, plugs and cable assemblies that provide connectivity in networking equipment. Modular plugs and cable assemblies are used within the structured cabling system, known as premise wiring. All connector products are designed to meet current performance standards including Category 6a regulations for Gigabit Ethernet and 10Gigabit Ethernet applications. Our MagJack® products include a comprehensive line of single and multi-port RJ-45 connectors with integrated magnetic for 10/100/1000Base-T applications.

RoHS Update

Bel is committed to the elimination of lead and other banned substances from our products. Significant effort has been directed towards compliance with European Directive 2002/95/EC and all Bel Power products in this catalog now conform to this directive although select products designed specifically for network equipment and/or file server applications make use of the exemption for lead in solder for electrical terminations. Consult data sheets for specific compliance information. RoHS compliant products are marked with the logo shown here. In addition, Bel also monitors other legislative requirements with potential impact to the use of banned substances in electronic products. We continue to pursue the use of alternative (greener) manufacturing methods and materials for our products.

MODULAR JACKS

Specifications / Design Features

- Housing Material: UL 94V-0 rated glass -filled thermoplastic
- Contact Material: Copper Alloy
- Contact Plating: Selective gold plating in the contact interface
- Current Rating: 1.5 A (maximum) @ 25° C
- Voltage Rating: 150 VAC (maximum)

Description

Stewart Connector single port modular jacks are designed to meet the demanding requirements of high-performance communication environments including the increasing harsh environments that mobile electronics must operate in. Available in a wide variety of height configurations, there is a Stewart single port right angle, vertical, angled jack that will provide the versatility and reliable solution for your networking or mobile applications. All of the Stewart single port modular jacks can be equipped with EPP-918A contact dressing to increase the durability of the contacts to withstand heavy insertions and extractions of the mating plugs and provide increased protection in harsh environments.

ARJ45® CAT 7A

Specifications / Design Features

- Cable and jack connector system designed for freq. up to & beyond 1,000 MHz
- Interface compatible with Nexans GG45 Connector System
- Patented plug design allows for port density equivalent to standard RJ45 connectors
- Plug design includes integral slim line strain relief with built in latch protection
- Uses data pair isolation technology to achieve high frequency performance
- Look and feel of an RJ45 connector but with beyond 10GBase-T performance capabilities

Description

The ARJ45® connector system is Stewart Connector's new family of products for Category 7 and Category 7a premise wiring systems deployed in 10Gigabit Ethernet and higher speed data transmission environments. This connector family consists of a cable-mounted plug and a single-port, PCB-mounted jack designed to meet Category 7a performance standards up to 1000 MHz as defined by the IEC60603-7-71. Additionally, the ARJ45 connector system can be used as a high speed replacement for closed loop applications currently using less economical connector types.

Stewart Connector's ARJ45 connector systems provide a competitive advantage in that they are built on the proven reliability of standard RJ45 interface mechanics which have been enhanced to support increased Category 7a data speeds. In addition, the ARJ45 connectors are interface-compatible with the Nexans' GG45 connector system.

How to Order ARJ45® CAT7a Cables

MRJ21 CABLES

Specifications / Design Features

- Dense, Telco-style, double -bladed design allows 1.5 to 3 times the port density of 2x6 modular RJ45 stacked jacks
- Three times the port density of RJ21 connectors
- Jackscrews for positive latching and secure cable retention
- Fully shielded to reduce EMI emissions
- Robust receptacle board lock design for superior PCB strain relief
- Cable exit options include 180 degree straight and 45 degrees left or right

Description

Stewart's MRJ21 cable assembly products are designed to support increased patch panel density in telecom and premise wiring applications. This modular cabling platform supports network applications such as gigabit Ethernet, Voice over Internet Protocol (VoIP), and Power over Ethernet (PoE). Cable connection options include left and right 45 degree exits as well as a 180 degree straight cable exit to facilitate various routing schemes to component racks.

Designed with a die cast backshell for shielding applications, Stewart's MRJ21 cable assemblies are durability tested to 500 cycles to insure unsurpassed quality and performance. Robust jackscrews provide a secure cable connection while the sturdy boardlock design allows superior PCB strain relief.

Technical Support

Stewart Connector's application and design engineers are ready to help with your next Ethernet connectivity solution. Our expertise designing and manufacturing both passive and active connectors as well as premise wiring solutions ensures a prompt solution to your unique requirements and application needs.

How to Order MRJ21 Cable Assemblies

Part Number*	Description	Cable Type	Shielding

MRJ21 PATCH PANELS

Specifications / Design Features

- Provides a transition point from MRJ21 to RJ45 connectivity
- Versions available to support Gigabit Ethernet
- Versions available to support 10/100 Base-T
- Accommodates shielded and unshielded cabling solutions
- 19" rack mounted
- 1 RU (Rack Unit) High
- 48 port
- UL listed

Description

The MRJ21 Patch Panel is a high density cabling device which transitions MRJ21 connectivity into traditional RJ45 ports. The demand for this product arises out of the fact that the MRJ21 connector is a high density 24 pair connector used on new networking and telecommunications equipment. Very often, this new equipment must interface with existing infrastructure which consists of RJ45 connectivity, and the MRJ21 patch panel allows for an organized transition point for this interface. The product can also be used in conjunction with MRJ21 cable assemblies to create high density, low profile, pre-terminated Category 5e permanent links. The product is available in 48 port versions for Gigabit Ethernet and 10/100 Base-T which fit into a standard 19" rack.

How to Order MRJ21 48 Position Patch Panels

MODULAR PLUGS

Specifications / Design Features

- Electro-polished contact designs to accommodate solid and stranded conductors
- Performance levels from CAT3 thru CAT6a
- Wire management systems to improve plug assembly and performance
- Available in 4 through 10 position selectively loaded contact configurations
- Numerous keying options available on select models
- Strain relief boots with latch protection available on certain configurations

Description

With an industry leading array of part number configurations available, Stewart Connector has an RJ45 modular plug available for your application. The product family is led by next generation shielded and unshielded CAT6a plugs which have wire management systems to provide reliable patch cord assemblies required in 10GBase-T applications. If you need port density, Stewart Connector offers mod plugs with slim line boots and latch protection to work in today's highest density Gigabit Ethernet devices. In addition, Stewart offers numerous modular plugs with keying for use in proprietary communications systems where plug to jack mate-ability needs to be controlled. Designed to exceed appropriate TIA-568 and IEC 60603-7 mechanical and electrical performance specifications you can count on Stewart Connector's plug to keep your network up and running.

PROTECTIVE SEALANT

Specifications / Design Features

- Improves durability and reliability for RJ11 and RJ45 modular jacks
- Helps prevent corrosion from harsh environmental conditions
- Withstands high temperature soldering (in excess of 260° C for 10 seconds)
- Low Level Contact Resistance testing to 10K cycles with no measurable change to gold plated contacts
- Contains a UV tracer for visible inspection of the EPP-918A coating on the contacts
- EPP-918A contact protectant can be used with any Stewart jack to increase durability and reliability

Description

Stewart's EPP-918A protectant improves product reliability by providing an unprecedented level of defense against harsh environmental conditions. In addition to providing superior moisture, humidity, and corrosion resistance, EPP-918A also shields against wear due to repetitive mating/un-mating forces.

By guarding electronic connectors with this contact dressing, EPP-918A prolongs the life of contacts within RJ11 and RJ45 jacks exposed to extreme environmental conditions. Once applied (during our manufacturing process), EPP-918A will not migrate – it adheres to the contacts instantly and remains intact without the need for additional tape, mechanical barriers, or cure time. This characteristic eliminates the added expense that other barrier methods entail.

EPP-918A is useful in any application, static or mobile, involving harsh environmental conditions and /or a very high number of mating cycles. Stewart's EPP-918A environmental protectant is RoHS compliant and can be used with virtually any Stewart connector product to increase durability and reliability.

How to Order Connectors with Protective Sealant

Part Number	Performance	Contacts	Shield	Shield Type	Ports	Orientation

EPP-918A protectant improves product reliability by providing an unprecedented level of defense against harsh environmental conditions.

RJ POINT FIVE CONNECTORS

Specifications / Design Features

- Designed for up to CAT5e applications, this system provides nearly double the port density when compared to a standard RJ45 Ethernet link
- Plug release pull tab readily accessible for ease of removal from anywhere on the receptacle
- LED light travels through the plug via fiber optic light pipes
- Contains an integrated cable strain relief and plug shield
- Modular receptacle design allows for quick and easy deployment of product extensions

Description

Stewart Connector's RJ point five connector system, the next generation Ethernet link, provides nearly double the port density when compared to standard RJ45 connector solutions. Ideal for OEM's seeking to increase density while also reducing the cost-per-port price point. The RJ point five cable system provides the convenience of a single connector per channel for maximum port flexibility and efficiency. This connector system currently supports Gigabit Ethernet speeds for CAT5e cabling and coupled with Bel's new single port PCB connector designs support PoE Plus and provide a migration path to 10GBase-T over CAT6a applications. Especially useful in mobile, handheld, and remote application such as small cells (femto cells).

HARMONICA JACKS

Specifications / Design Features

- CAT3 to CAT5e connectors are available in shielded and unshielded configurations to support Gigabit networks
- Provides 100 g of Contact Normal Force (minimum)
- Jack dimensions meet FCC requirements when plated with 50 microinches of gold
- Jacks are UL approved and DUXR2 and DUXR8 certified and RoHS compliant
- Available in high temperature plastics to meet new manufacturing requirements

Description

Stewart Connector offers CAT3 and CAT5e Harmonica Jacks. Our space-saving modular Harmonica jacks offer the most features for the maximum reliability and performance you need for today's integrated data systems from the central office all the way through to your mobile applications. Our enhanced shielding provides optimum protection against EMI, and our unique panel tabs provide a high normal force for superior shielding effectiveness. The longer springs allow repeated insertions /withdrawals from a panel, and prevent "fish hooking" on the panel during insertion. All of the Stewart Harmonica style modular jacks can be equipped with EPP-918A contact dressing to increase the durability of the contacts to withstand heavy insertions and extractions of the mating plugs and provide increased protection in harsh environments.

Custom designs are available on request. Email techhelp@belf.com to submit your specific application needs. Data sheets with electrical and mechanical specifications are available at www.stewartconnector.com

The longer springs allow repeated insertions /withdrawals from a panel, and prevent "fish hooking" on the panel during insertion.

LANDING PAGE

Website Features

1. Stewart Connector capabilities page
2. Find your nearest technical field sales representative
3. View larger product image
4. At-A-Glance Catalogs – Downloadable in PDFs
5. Click on image for product page, searchable configurator and...available stock

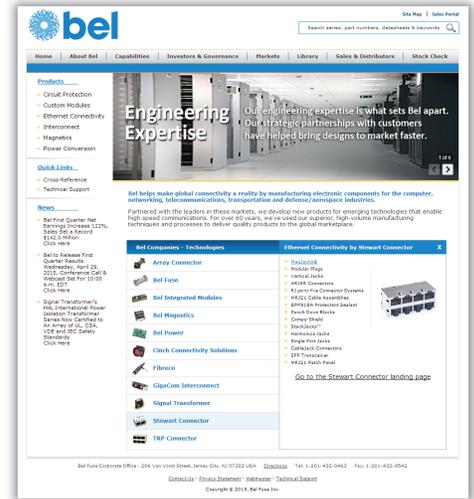

The screenshot shows the Stewart Connector website landing page. At the top left is the Stewart Connector logo, a blue gear-like icon, with the text "stewart CONNECTOR a bel group". To the right is a search bar with the placeholder text "Search series, part numbers, datasheets & keywords" and a magnifying glass icon. Below the search bar is a navigation menu with links: Home, Divisions/Brands, Contact Us, Library, Representative, Capabilities, Stock Check, and Request Information. A blue circle with the number "2" points to the "Capabilities" link. Below the navigation menu is the main content area titled "Stewart Connector – Ethernet Connectivity". To the left of this title is a small image of a patch panel with a blue circle and the number "3" pointing to it, and a "View Larger" link. To the right of the title is a paragraph of text describing the product portfolio, with a blue circle and the number "1" pointing to it. Below the text is a grid of product categories, each with a blue header and a representative image: MagJacks, Modular Plugs, Vertical Jacks, ARJ45™ CAT7a, RJ point five System, MRJ21 Cable Assemblies, Protective Sealant, Punch Down Blocks, Compu-Shield, StackJacks™, Harmonica Jacks, Single Port Jacks, CableJack Connectors, SFP Transceiver, and MRJ21 Patch Panel. A blue circle with the number "5" points to the "Compu-Shield" category. At the bottom right of the grid are two PDF download buttons: "Download At-A-Glance" and "Download Focus Catalog", with a blue circle and the number "4" pointing to them. At the bottom of the page is a small disclaimer: "MRJ21 and RJ point five are trademarks owned by TE Connectivity used under license." and a "ReGIS" logo.
