Foam cushion layer keeps nasty shocks away
- EASY ACCESS**  
Twin doors allows front panel and rear cables to be accessed
- ROBUST**  
Riveted ball corners stops knocks and bangs

FLIGHT CASES

Solving the problem of protecting and lifting of often heavy amps, CDs and tuners, this twin handled 19" rack case is a real workhorse. There's no need to take kit out of the case - just pop off the front door to access controls and disc trays, and the rear door for power and signal cables. Rubber feet allow cases to be securely stacked on top of each other and insulate from vibration. Doors have solid butterfly clasps to prevent accidents on the trip and the 25mm waffle foam stops knocks and bangs. The largest in our range with a 8U capacity. Comes complete with a pack of rackmount fittings.

8U
